Proficiency Level

ELPS: Listening

c2E: use visual, contextual, and linguistic support to enhance and confirm understanding of increasingly complex and elaborated spoken language

Strategy: Oral Scaffolding

From *Navigating the ELPS in the Science Classroom: Using the Standards to Improve Instruction for English Learners* by John Seidlitz & Jennifer Jordan-Kaszuba (Seidlitz Education)

Beginner

The teacher provides word cards, with a specific word written on each card that is part of the simpler vocabulary of the concept students are studying. The teacher pronounces the word, explains its meaning, and uses it in a sentence. The student then pronounces the word and uses the word to complete a sentence stem (“\_\_\_\_\_ means...” or “I think \_\_\_\_\_ is...”).

Intermediate

The teacher provides word cards, with a specific word written on each card that is part of the academic vocabulary

students are studying. The teacher pronounces the word and uses the word in a sentence pertaining to the concept students are studying. The student then pronounces the word and uses it in a different sentence. Complexity of the sentences will vary depending on students' command of the language.

Advanced/Advanced High

The teacher provides students with a short list of more complex words pertaining to the concept they are studying. Each student chooses a word from the list, pronounces it, and gives the meaning of the word. Teacher support is given if needed. Then, the student writes and reads a sentence using the word as it is used in the academic concept. Complexity of the sentences will vary depending on students' command of the language.

For more information about implementing language acquisition strategies and incorporating the ELPS, check out the Teacher Resources.

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

The teacher gives students material that has already been broken into chunks. Students read the material and draw pictures that summarize each chunk.

Intermediate

The teacher gives students materials that they can chunk. Students read and organize the materials in a way that will help them internalize it better. Students use the chunks to write summaries or paraphrase the material.

Advanced/Advanced High

Students break down materials to enable them to better organize and internalize it. They chunk the materials in such a way as to create their own schema to help understand new concepts. Students then write summaries or paraphrase the material.

For more information about implementing language acquisition strategies and incorporating the ELPS, check out the Teacher Resources.

ELPS: Learning

c1E: internalize new basic and academic language by using and reusing it in meaningful ways in speaking and writing activities that build concept and language attainment

Strategy: Choose the Words

From Navigating the ELPS in the Science Classroom: Using the Standards to Improve Instruction for English Learners by John Seidlitz & Jennifer Jordan-Kaszuba (Seidlitz Education)

Beginner

Students or the teacher choose a basic vocabulary word from the word wall. Students use the word in a conversation with the teacher and then write a sentence using the word.

Intermediate

Students or the teacher choose a basic vocabulary word or content-based, grade-level vocabulary word from the word wall. Students use the word in a conversation with the teacher or another student and then write a sentence from the conversation using the word.

Advanced/Advanced High

Students choose a content-based, grade-level vocabulary word from the word wall. Students use the word in a conversation with another student and then write a sentence from the conversation using the word. The complexity of the sentence will vary depending on students' command of the language.

Updated Text: The Importance of Resource Management in a Better World

Have you ever wondered why it is important to manage our resources wisely? Resource management is crucial in addressing global challenges such as reducing energy consumption, fighting poverty, tackling malnutrition, and minimizing air and water pollution. Let's look at some reasons why resource management plays a vital role in creating a better world for everyone.

Original Text: New Content

Updated Text: Instead of having the class follow the step by step instructions to the hands on explore above, this is an opportunity for student or student groups to create their own questions and investigations about the physical properties of elements. Remind students they are studying metals, nonmetals, and metalloids. They need to create a testable question and experiment about the physical properties that define different elements. The teacher may provide materials for students to use while they plan and conduct their investigations. Allow students to pull other materials if needed. Give students time to create their testable questions and plan an investigation. Once students have planned they can gather the materials they need for their investigations. Review safety procedures before students begin investigations. Allow each group time to run their investigation. Students should fill out their ISN pages.

Updated Text: In our technologically advanced world, the use of various elements has proven important in the development and functionality of countless applications. Metals, non-metals, and metalloids each have a unique role in our daily life. From electronics and construction to healthcare and transportation, these elements shape our everyday experiences in ways we often take for granted. Let's take a look at each of these and explore their their imprtance to modern society.

Metals are the workhorses of our industrialized world, known for their exceptional strength, malleability, and high electrical and thermal conductivity. They form the backbone of our infrastructure and are utilized in the construction of buildings, bridges, and roadways. Iron is particularly prized for its durability and is employed extensively in construction projects worldwide. Copper, with its remarkable conductivity, is a valuable component in electrical wiring and circuits, enabling the easy transmission of electricity. Aluminum, known for its lightness and corrosion resistance, is used in the aerospace industry, allowing for efficiency and safety of modern aircraft. Metals also contribute to the advancement of medical science. Titanium, for instance, possesses a unique combination of strength, lightness, and biocompatibility, making it an ideal material for surgical implants such as joint replacements and dental fixtures. Its presence in the medical field has revolutionized the lives of many, restoring mobility and enhancing overall well-being.

Updated Text:

Have group Plants sit in the inner circle.

Have group Animals sit in the outer circle.

Set the classroom expectations for the dialogue as follows:

Be an active listener.

Wait your turn to speak.

Build on the discussion.

Contribute to the discussion.

Use sentence stems and new vocabulary as you speak in complete sentences.

Pose the question to the students again to initiate discussion.

Have students in group Plants explain what they think in regard to the posed question. While this is happening, make sure students in group Animals are actively listening and taking notes on what students in group Plants are saying. To help all students internalize correct usage of basic and academic language, have them use sentence stems and new vocabulary to frame their thoughts, such as "I know that..." and "I think that..." in addition to speaking in complete sentences.

After 5 minutes, have students switch roles and seats. Ask students in group Animals, now sitting in the inner circle, to explain why they agree or disagree with what students in group Plants said. Make sure students in group Plants are actively listening and taking notes on what students in group Animals are saying.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

During this time, students can share their thought process while reinforcing basic and academic language. Students should make generalizations about the new content using sentence stems like, “I agree that \_\_\_ are ...,” “Things that are not ...” and “\_\_\_ means...”

After 5 minutes, have students switch roles and seats for the last time. Ask students in group Plants, now back in the inner seats, to rebut or agree with what students in group Animals have said. Make sure students in group Animals are now actively listening.

Students can reuse basic and academic language by once again generalizing what they have heard as they share new thoughts. They can use sentence stems like, “I can use the word \_\_\_ when...”

redesign one of the solutions based on scientific ideas and principles, propose a modified solution through a presentation, and critique the solutions of other groups.

## The Problem

Human activity, such as spraying fertilizer and oil and chemical spills, leads to pollution by infiltrating the groundwater in a watershed. In addition, construction, urbanization, and deforestation developments lead to surface water flooding and land erosion in a watershed. You are tasked to build a model that demonstrates the impacts of pollution or flooding on a watershed using materials from your teacher. You are required to share ways to reduce this impact.

## Criteria and Constraints

Spend some time researching the scientific ideas behind how human activity has impacted local watersheds in terms of pollution, flooding, and erosion.

Use the data gathered in your research to inform your decision according to scientific principles about your solution redesign.

Research plant breeding for crops with a high yield and superior adaptability to help improve global food security. Gather information from at least three credible sources.

Consider the cost-effectiveness of different technologies. Evaluate the potential short-term and long-term impacts, financial implications, and potential risk or benefit for each technology.

Present your decision through a digital product of your choosing.

Updated Text: Driving Question New medications are constantly introduced to the market. If prescribed incorrect doses, these new medications can do much more harm than good. How do pharmaceutical companies solve this problem when making and introducing a new medication? Goals The speech should be three to five minutes in length. The speech can be in a variety of formats but should include a call to attention, need, solution, visualization, and action. Include information about the following: Concentration in medication The benefits or hazards of using medication with varying concentration levels The solutions that pharmaceutical companies use to ensure properly concentrated medications

Updated Text: Pose the questions to the class, but tell the students not to answer them. Instead, students should pose questions to their elbow partners. To help all students internalize correct use of basic and academic language, have them use sentence stems and new vocabulary to frame their thoughts, such as "I know that planets..." and "I think that moons..." in addition to speaking in complete sentences.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

What is a solar system? What objects do you know of that are part of a solar system? Students should know the planets of the solar system. They should also know that the solar system has one star, the Sun. Along with the planets, the students should know that some planets have moons. Students may know about asteroids, meteors, and comets but not have in-depth knowledge.

How do planets and moons differ? Students should know that planets revolve around the Sun and moons revolve around planets.

What holds solar system objects in motion? Students should know that gravity can act from a distance, but they might not know that gravity is the force holding all solar system objects in motion.

Prompt students to turn and talk to their partners. Partners should answer the students' questions with the basic language and new vocabulary in a complete sentence and then pose another question. (Still, they should not answer the teacher's questions.) During this time, students can share their thought process with a think aloud strategy. Students should make generalizations about the new content using sentence stems like, "I think examples of \_\_\_ are ...," "Things that are not ..." and "\_\_\_ means..."

After both partners share initial thoughts, the pair should refine their thinking and share it with another set of partners, reusing the new content and basic language as they revise their thoughts.

Updated Text: Driving Question

How can the use of alternative energy sources like solar panels installed on a home play a role in reducing human contribution to climate change?

Goals

The speech should be three to five minutes in length.

The speech should consist of three parts: an introduction to the topic, a body (topic to be discussed), and a conclusion to wrap it all up.

Include information about the following:

Past research and development of solar panel technology

A cost-benefit analysis of solar panels over time

What are the average electricity bills for homes in your area?

How much do solar panels typically cost to install?

How much could a family expect to save on their annual electricity bills once solar panels are installed?

How would the widespread adoption of home solar panels affect climate change?

Updated Text: Food webs are complex systems that depict the interrelationships between different organisms in an ecosystem. They demonstrate how energy and matter flow through various levels, starting with the Sun, to producers to consumers and decomposers. However, it is not only energy that moves through these systems; matter also cycles continuously, ensuring the sustainability and balance of the ecosystem. In this passage, we will explore how food webs facilitate the cycling of matter, allowing for the efficient use and recycling of resources.

Producers, such as plants and algae, harness energy from the sun through photosynthesis. These primary producers convert sunlight, water, and carbon dioxide into organic matter, such as carbohydrates and glucose which are composed of carbon, oxygen, and hydrogen. Plants and algae also take up nutrients from the soil and water. These nutrients, like nitrogen and phosphorus, are available in the soil due to the cycling of matter through the carbon and nitrogen cycle.

When herbivores, which are primary consumers, eat the producers, they obtain the stored energy and matter. They break down the glucose, carbohydrates, nitrogen, and other minerals obtained from consuming the plant matter. They use this carbon, oxygen, nitrogen, hydrogen, and other elements as building blocks for proteins and other biomolecules. They also use the energy stored in the bonds of these biomolecules to fuel processes in their own systems.

Updated Text: Food webs are systems that demonstrate how matter is transferred between producers, consumers, and decomposers as the three groups interact within the connected food chains in an ecosystem. Transfers of matter into and out of the physical environment occur at every level. Matter moves throughout the ecosystem when a producer uses photosynthesis to create the glucose it needs to carry out life processes. Producers also obtain matter such as carbon, nitrogen, and other essential elements from the soil. When a producer is eaten by an herbivore, these elements move to the consumers, and eventually to the decomposers, cycling the matter through the ecosystem. The atoms that make up the organisms in an ecosystem are cycled repeatedly between the living and nonliving parts of the ecosystem.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

The image below shows examples of matter that is cycled constantly through the biosphere. Food webs are only one system that helps with the cycling but a very important one.

source

Let's take a deeper look at how matter is cycled. When producers are consumed by primary consumers (herbivores), glucose is broken down through the process of cellular respiration to obtain the energy stored in bonds. They also obtain other nutrients like nitrogen and phosphorus when they eat the producers. This is not a very efficient process to obtain matter. Some of the matter is lost to waste materials. For example, urea, which contains nitrogen, is one of the main components of urine excreted by animals. This process continues in the food web as primary consumers are consumed by secondary consumers and secondary consumers are consumed and so on until apex predators are reached.

Updated Text: Weather and climate systems are complex and fascinating natural phenomena that shape our environment. From the gentle breeze that caresses our skin to the powerful storms that sweep across the planet, all weather events are driven by the movement and transformation of energy within and across systems. In this passage, we will explore and analyze how energy is conserved through a variety of systems in weather and climate, and how it influences the Earth's atmospheric conditions.

The primary source of energy for weather and climate systems is the Sun. Sunlight, consisting of electromagnetic waves, reaches the Earth's surface and is absorbed by land, oceans, and vegetation. This absorbed energy is then converted into different forms and sets various processes in motion. Energy is not created nor destroyed during this process.

Once sunlight reaches the Earth's surface, it undergoes several transformations. Some of the energy is reflected into space, while the rest is absorbed. Absorbed energy heats the Earth's surface, causing it to warm up. The warm surface, in turn, radiates heat energy back into the atmosphere.

The transfer of energy from the Earth's surface to the atmosphere is responsible for the creation of weather systems and atmospheric circulation patterns. As Earth's surface warms, the air above it also heats up. Warm air becomes less dense and rises, creating areas of low pressure. Conversely, cooler air sinks and creates regions of high pressure. This

Updated Text: Scientists rely heavily on gathering and analyzing vast amounts of observational data from various sources. Analysis of the data has played a crucial role in helping scientists develop theories that describe the origin of the universe. Here are some ways data analysis has contributed to our understanding of the universe's origin:

**Cosmic Microwave Background (CMB) Radiation:** As discussed, one of the most significant pieces of evidence supporting the big bang theory is the discovery of the cosmic microwave background radiation. By analyzing the CMB data, scientists have been able to study the early universe's temperature fluctuations, which led to the formation of galaxies and large-scale structures we observe today.

**Observational Surveys:** Telescopes and observatories around the world have collected vast amounts of data from the observable universe. By analyzing the light emitted from distant galaxies, supernovae, and other celestial objects, scientists have been able to determine the universe's expansion rate.

**Cosmic Structure:** Data analysis of galaxy surveys has revealed the large-scale structure of the universe, including the distribution of galaxies, galaxy clusters, and cosmic voids. Understanding the patterns in this data has helped refine theories about how galaxies formed and how they are distributed throughout the universe.

**Nucleosynthesis:** The study of the abundance of light elements in the universe, such as hydrogen, helium, and lithium, provides crucial information about the early universe's conditions. By analyzing the ratios of these elements, scientists can infer the temperature, density, and age of the universe at different stages of its evolution.

Updated Text: Page 8

Scientists have been gathering data on the loss of forest cover in locations around the world. They have been comparing this loss of forest cover to the changes in temperature experienced by that same region in the same time frame. Below is an image of the forest cover difference from 2002 – 2018. In locations where there was significant loss of forest, there is a corresponding increase in the temperature of that location. Based on this data, a limited conclusion could be drawn that loss of forest canopy in any location would cause the temperature to increase in that same location. This would cause a shift in the climate of that location. Loss of forest cover could reasonably be directly related to climate change.

Page 14

7 Use the graph as evidence to describe how deforestation can influence climate.

Based on the data above, the temperature of the areas that lost cover increased in temperature from 1 to 6 degree Celsius over the 16-year period of 2002 to 2018. The locations that kept cover either decreased in temperature by up to 2 degrees celsius, stayed the same temperature or increased by a degree. This indicates that losing the cover provided by trees can cause an increase in temperature that will affect the climate long term if the cover provided by the trees does not return.

Updated Text: Every species on Earth is unique, with its own set of traits and characteristics. Within a population you will find that species have trait variations. These variations can lead to structural adaptations, behavioral adaptations, and physiological adaptations all of which can influence an organism's chances of survival. Individuals with traits that enable them to survive lead to reproductive success and are more likely to pass on those traits to their offspring, contributing to the likelihood of survival of a species over generations.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

**Structural Adaptations:** These refer to physical traits that help an organism survive in its environment. These adaptations can enhance an organism's ability to find food, evade predators, or adapt to specific habitats. Some species, such as certain insects, exhibit variations in their body coloration and patterns. These variations allow individuals to blend more effectively into their environment, making them less visible to predators. The individuals with better camouflage are more likely to survive and pass down trait variation to their offspring. Camouflage helps species avoid being easily detected, increasing their chances of survival and reducing the risk of predation. This increases their chances of reproductive success, due to their survival.

Updated Text: Structure and Function in Organisms

The structure and function of organisms have a special relationship that helps them live and survive in their environments. The structure refers to the way an organism's body parts are put together, while the function is what those body parts do to help the organism carry out its life activities. This relationship becomes even more interesting when we look at the variation of traits in structural adaptations. For example, think about how different birds have different beaks. The shape and size of a bird's beak are directly related to its function or what it can do. A long, thin beak is great for probing into flowers to get nectar, while a short, sturdy beak is good for cracking seeds or nuts. The variation in beak structure among different bird species allows them to have specialized ways of finding and eating food. Some birds have curved beaks for catching fish, while others have sharp beaks for tearing meat. Because of these variations, the birds are able to adapt to different environments and find the right kind of food they need to survive. So, the structure of an organism's body parts is important because it determines how it functions and helps it meet its needs. By having different structural adaptations, organisms can live in different habitats and have a better chance of finding food and surviving.

## Adaptations, Survival and Reproductive Success

In the natural world, individual organisms within a species possess unique sets of traits that play a vital role in their survival and reproductive success. Traits are the distinguishing characteristics that set individuals apart from one another. These can include an organism's physical structures, patterns of behavior, and internal physiological processes. Within a population of a particular species, there exists variation in traits. These variations can lead to physical, behavioral, and physiological adaptations that impact the likelihood of a

Updated Text: Students will focus on the first three steps of the Engineering Design Process (defining the problem, brainstorming, and planning) to research the data used as evidence for scientific theories on the origin of the universe and design interactive models that demonstrate at least two theories.

The origin of the universe is a commonly debated topic because there is a lack of scientific evidence to justify one theory. Also, there are conflicting viewpoints surrounding the various theories that make it difficult to teach to students. You are tasked with proposing a solution to make this information accessible in the classroom. You will research the data used as evidence for scientific theories on the origin of the universe and design an interactive model. This model must include data that supports two theories, including two main components of each theory.

Research two or more scientific theories on the origin of the universe.

Theories may include but are not limited to the big bang theory, slow freeze theory, and steady state theory.

Research the data used as evidence to help develop each theory.

Design an interactive model with data that supports two theories, including two main components of each.

Original Text: New Content

Updated Text: Students were presented with a defined problem. They brainstormed a solution, planned it out, and built it. The results of those steps of the engineering design process are shown below. After analyzing their initial results, you will redesign one of the solutions, propose a modified solution through a presentation, and critique the solutions of other groups.

The Problem

A friend of yours believes that all stars are composed of hydrogen, and therefore they all must have the same temperature and brightness. However, stars are composed of hydrogen, helium, and a small number of other elements. All stars vary in temperature and brightness. You are tasked with evaluating a model of a star's life cycle then compare and classify the stars in the model, using data from the Hertzsprung-Russell diagram and modern scientific theories of star life cycles as a reference, by explaining the correct information about stars to your friend.

Criteria and Constraints

Evaluate a model of a star's life cycle.

Use a small red balloon, a medium yellow and orange balloon, a large blue balloon, glitter, a miniature marshmallow, and a raisin in your model.

Compare and classify the stars in your model, using data from the Hertzsprung-Russell diagram and theories of stellar life cycles as a reference, by explaining the correct information about stars to your friend.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

How can the use of alternative energy sources like solar panels installed on a home play a role in reducing human contribution to climate change?

Have devices available to research solar panels and climate change

Allow students to work for the remainder of the class on the research and draft of their speeches; allow students to complete work at home if necessary.

Make sure that the students include information about past research and development of solar panel technology, a cost-benefit analysis of solar panels over time, and how would the widespread adoption of home solar panels affect climate change.

Updated Text: Homology is a term used in biology to describe the similarity of structures or genes that are derived from a common ancestor. Anatomical homologies show structural or anatomical traits that are similar, which is another piece of evidence that suggests biological evolution and common ancestry. Paleontologists compare bone structures in organisms to determine their common ancestry. A likeness between the bone structures of two creatures may indicate a common ancestor. Humans, birds, and whales all show similar anatomical patterns in their forelimbs as shown in the image above. Although they look similar, these forelimbs function differently in each of the organisms. This indicates that these animals have a common evolutionary origin and inherited their forelimbs from an ancestor that had a similar limb structure.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Some similarities can be seen through vestigial structures. Vestigial structures are structures that no longer have a use in the organism. For example, the appendix in humans and pelvic bones in whales are both considered vestigial structures.

Some organisms share similar structures that do not point to evolution from a common ancestor. Instead, these analogous structures demonstrate an evolutionary adaptation as a result of similar environments or a need to serve a specific function. Insect wings and bird wings are similar structures that carry out the same function, but it is unlikely that they evolved from a recent common ancestor. Instead, birds and insects developed wings because this provided them with an evolutionary advantage.

Updated Text: In this experiment, you will first examine slides for the presence of starch. Then, you will use experimental testing to evaluate the scientific explanation that enzymes are biological molecules that act as catalysts to speed up reactions by lowering the activation energy required.

9. Scientists have discovered that the lining of the small intestine produces lactase. Lactase breaks down large polymers in lactose to monomers for absorption through the lining of the intestine. Use what you have learned in this experiment to evaluate what will happen to a person whose body does not produce lactase.

During the experiment we saw that without amylase starch was not broken down. If a person does not produce lactase then they would not break down lactose as effectively.

Original Text: New Content

Updated Text: In this experiment, you will compare viruses to cells and model an infectious viral disease outbreak. Viruses are microscopic agents that can infect living cells and cause diseases. The current scientific explanation is that viruses spread among populations by various modes of transmission, such as direct contact, airborne droplets, or contaminated surfaces. The rate and extent of viral spread depend on factors such as the virulence of the virus, the susceptibility of the host, and the environmental conditions. To prevent or control disease outbreaks public health measures such as vaccination, isolation, and hygiene are essential.

Imagine that a pathogen is running rampant in your classroom, and only the teacher knows who is infected. You will experiment with several ways that pathogens can be transmitted, how they infect large groups of people and will then critique the scientific explanation on how to stop or control a disease outbreak.

(Image of a group of connected people spreading a virus)

3. Current scientific understanding is that identifying the mode of transmission of a disease is one of the most important ways to help stop the spread of infections. Using what you have learned in this experiment, write a critique of this current scientific explanation.

Updated Text: Reproduction is the process of creating new individuals of the same species. It is essential for the survival and evolution of living organisms. Reproduction involves the interaction of different body systems, such as the reproductive system, the endocrine system, the nervous system, and the circulatory system. The reproductive system consists of organs and structures that produce gametes (sperm and egg cells) and support the development of offspring. The male

reproductive system includes the testes, epididymis, vas deferens, seminal vesicles, prostate gland, urethra, and penis.

The female reproductive system includes the ovaries, fallopian tubes, uterus, cervix, vagina, and vulva.

Body Systems and Reproduction

The reproductive system is controlled by hormones secreted by the endocrine system. The endocrine system is a network of glands that secrete chemical messengers called hormones into the bloodstream. Hormones regulate various functions of the body, such as growth, metabolism, mood, and reproduction. The main endocrine glands involved in reproduction are the hypothalamus, the pituitary gland, the gonads (testes and ovaries), and the adrenal glands.

The hypothalamus and the pituitary gland are located in the brain and communicate with each other to control the release of hormones from the gonads. The gonads produce sex hormones, such as testosterone in males and estrogen and

progesterone in females, that influence the development of secondary sex characteristics and regulate the production and maturation of gametes. The adrenal glands produce stress hormones, such as cortisol and adrenaline, that can affect reproductive function.

The nervous system is involved in reproduction in several ways. First, it allows organisms to sense and respond to external and internal stimuli that influence sexual behavior, such as pheromones, visual cues, touch, emotions, and thoughts. Second, it regulates hormonal secretion by sending signals from the hypothalamus to the

Updated Text: The human body has several systems that work together to protect it from injury or illness. Protection of the body from external injury is provided by the integumentary system, in which the skin acts as a physical barrier to the environment, and by the skeletal system, which protects the internal organs. The nervous and muscular systems provide reflex actions that respond to external stimuli to protect the body from injury, extreme temperatures, or pain. The endocrine system produces hormones in coordination with the nervous system that trigger systemic responses in emergency situations.

Protection from pathogens, which include bacteria, viruses, and parasites, is provided by three levels of defense.

- Barriers: Skin, hair, mucus, sneezing, coughing, and stomach acids block pathogens.
- Innate immune response: Rapid responses to chemical patterns produced by pathogens can trigger inflammation (increased blood flow and recruiting immune cells), phagocytes (white blood cells that engulf pathogens), or the complement system (proteins that coat pathogens, which speed destruction by phagocytes).
- Adaptive immune response: Each pathogen has a specific surface antigen that the body can recognize, which triggers the release of three types of lymphocytes, which are white blood cells that defend the body. ○B cells make antibodies that bind to the pathogen's antigen ○Cytotoxic cells destroy tagged pathogens. ○Helper T cells direct the attack on pathogens.

Updated Text: 5. Whales evolved from a four-legged mammal that lived on land called Ambulocetus around 50 million years ago.

(Image inserted of fossil record)

Analyze the image above and evaluate it as an example of how the fossil record provides evidence of common ancestry.

The fossil record of the whale shows how it evolved from a land mammal to a marine mammal over millions of years. The fossils reveal changes in the whale's anatomy, such as the loss of hind limbs, the development of a blowhole, and the enlargement of the flippers and tail. These adaptations helped the whale survive and thrive in the aquatic environment. The fossil record also shows how the whale's ancestors diversified into different species and groups, such as baleen whales and toothed whales, with different feeding and communication strategies.

Updated Text: The missing mass is converted into energy thanks to the mass-energy equivalency. Mass-energy equivalency is a special idea in science that says energy and mass are like best friends and can change into each other. This was famously explained by Albert Einstein with his equation,  $E=mc^2$ , which shows how much energy (E) is hidden inside an object with mass (m) and how they can swap places.

Updated Text: Paragraph addition on page 8:

Ions are similar to atoms in many ways. Ions contain protons, neutrons, and electrons found in the same locations as in an atom. When you compare the atom and ion of the same element, you find they have the same number of protons and neutrons. As discussed earlier, the majority of an element's mass is in the nucleus. The mass of the electrons is so small, it is considered insignificant to the mass of the protons or neutrons of the nucleus. We consider an ion of a particular atom to have roughly the same mass as that of the atom itself. For example, a carbon atom and ion will both have six protons, and essentially have the same mass.

For those groups who may respond well to a more challenging learning experience, you can use one of the additional Plan stage graphic organizers included as an appendix in the Teacher Implementation Guide. These additional Plan stage graphic organizers ask students to think about a bit more information during their investigation. For example, one of the graphic organizers asks students to make an explicit hypothesis prior to beginning the investigation. Another way to challenge students is to not provide a graphic organizer for the plan stage at all. This approach requires students draw on prior experiences in planning and carrying out investigations to develop their plan without the scaffold of the graphic organizer.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-latex Gloves
- Lab Coat/Apron
- Goggles

Additional safety considerations for this investigation include:

- Handle glass with care. Always wear gloves, a lab coat/apron, and safety goggles when handling glass materials.
- Students should never handle broken glass. Inspect all glass materials prior to distribution.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Updated Text: Added the following paragraph to the end of the Teaching Tip for In-Person Lessons:  
For those groups who may have finished early, you can use the questions posted to the wonder wall you created earlier in the investigation as an extension activity. We suggest having those groups pick a question from the wonder wall and use this time to collect data in order to answer that question as well. You should help the group choose a question that is appropriate for the amount of time remaining as well as the available equipment for data collection.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Safety Goggles

Additional safety considerations for this investigation include:

- Fallen materials may present a trip/slip hazard. Instruct students to be careful to confine materials to the work area and tread with care when these materials are present, and to clean up any materials that fall on the ground immediately.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

<https://d1yqpar94jqbqm.cloudfront.net/documents/TexasEducationAgencyTexasSafetyStandards.pdf>

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:

It is important to listen to the conversations of several groups when they are talking over what they read at the end of this activity. Listening to the conversations is an opportunity for formative assessment as students are processing the readings. You should take notes on what students understand and what they remain unclear on. The final activity of this stage provides an opportunity to reteach those concepts students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:

It is important to listen to the conversations of several groups when they are talking over what they read at the end of this activity. Listening to the conversations is an opportunity for formative assessment as students are processing the readings. You should take notes on what students understand and what they remain unclear on. The final activity of this stage provides an opportunity to reteach those concepts students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

Updated Text: Added the following paragraphs to the end of the Teaching Tip for In-Person Lessons:

For more specific guidance on how to work with students at different levels of English language proficiency, as defined by the ELPS, we suggest consulting the section on supporting emerging multilingual students in the Teacher Implementation Guide.

For those groups who may respond well to a more challenging learning experience, you can use one of the additional Plan stage graphic organizers included as an appendix in the Teacher Implementation Guide. These additional Plan stage graphic organizers ask students to think about a bit more information during their investigation. For example, one of the graphic organizers asks students to make an explicit hypothesis prior to beginning the investigation. Another way to challenge students is to not provide a graphic organizer for the plan stage at all. This approach requires students draw on prior experiences in planning and carrying out investigations to develop their plan without the scaffold of the graphic organizer.

For students who have peer review feedback with few areas for improvement, we suggest using the more advanced peer review guide. This will provide more in-depth guidance for peer reviewers, leading to additional feedback for students on how to improve their scientific writing. This will also benefit the peer reviewers, by drawing attention to additional criteria on which to evaluate the quality of a written scientific argument.

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Double-check the area surrounding the workstation to make sure that any materials that fell during the investigation are picked up.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Rubber Gloves

Additional safety considerations for this investigation include:

- Always wear rubber gloves when handling wires/batteries
- Inspect batteries for acid/corrosion prior to distribution. Battery acid is a harmful substance. Dispose of any batteries with visible acid/corrosion.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

<https://d1yqpar94jqbqm.cloudfront.net/documents/TexasEducationAgencyTexasSafetyStandards.pdf>

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Glass: Inspect glass materials for damage before storing. Dispose of any broken glass materials. Follow your school's policy on disposing of broken glass.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:  
It is important to listen to the conversations of several groups when they are talking over what they read at the end of this activity. Listening to the conversations is an opportunity for formative assessment as students are processing the readings. You should take notes on what students understand and what they remain unclear on. The final activity of this stage provides an opportunity to reteach those concepts students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-latex Gloves
- Lab Coat/Apron
- Goggles

Additional safety considerations for this investigation include:

- Handle glass with care. Always wear gloves, a lab coat/apron, and safety goggles when handling glass materials.
- Students should never handle broken glass. Inspect all glass materials prior to distribution.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

<https://d1yqpar94jqbqm.cloudfront.net/documents/TexasEducationAgencyTexasSafetyStandards.pdf>

Updated Text: Teaching Tip for In-Person Lessons

We suggest creating a wonder wall where you can write down things students wonder about in response to the phenomenon. A wonder wall ensures that all students questions about the phenomenon are acknowledged as valid and their contributions to class discourse are valued. The wonder wall also provides resources for extension activities for students in the Do and Share stage.

For more specific guidance on how to work with students at different levels of English language proficiency, as defined by the ELPS, we suggest consulting the section on supporting emerging multilingual students in the Teacher Implementation Guide.

For those groups who may respond well to a more challenging learning experience, you can use one of the additional Plan stage graphic organizers included as an appendix in the Teacher Implementation Guide. These additional Plan stage graphic organizers ask students to think about a bit more information during their investigation. For example, one of the graphic organizers asks students to make an explicit hypothesis prior to beginning the investigation. Another way to challenge students is to not provide a graphic organizer for the plan stage at all. This approach requires students draw on prior experiences in planning and carrying out investigations to develop their plan without the scaffold of the graphic organizer.

Updated Text: Teaching Tip for In-Person Lessons Be sure to provide students with opportunities to talk in small groups during this activity. Small group structures offer all students, including emerging multilingual students, a chance to engage in sense-making with their peers and also offers them space to use their verbal and nonverbal (e.g., writing, drawing pictures, using gestures and symbols) resources to express their ideas and a chance to learn from other students' uses of these resources as well. When students are tasked with expressing their ideas, be sure to encourage them to do so through multiple modes (speaking, writing, drawings, and gestures) and to use both content-specific and everyday registers. This process helps students fully express themselves, allowing peers to evaluate, question, and build on their ideas.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Safety Goggles

Additional safety considerations for this investigation include:

- Fallen materials may present a trip/slip hazard. Instruct students to be careful to confine materials to the work area and tread with care when these materials are present, and to clean up any materials that fall on the ground immediately.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Batteries: During clean-up, remove batteries from circuits/devices to mitigate risk of corrosion/acid leak. Store batteries securely.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so

Updated Text: Added the following paragraphs to the end of the Teaching Tip for In-Person Lessons:

For more specific guidance on how to work with students at different levels of English language proficiency, as defined by the ELPS, we suggest consulting the section on supporting emerging multilingual students in the Teacher Implementation Guide.

For those groups who may respond well to a more challenging learning experience, you can use one of the additional Plan stage graphic organizers included as an appendix in the Teacher Implementation Guide. These additional Plan stage graphic organizers ask students to think about a bit more information during their investigation. For example, one of the graphic organizers asks students to make an explicit hypothesis prior to beginning the investigation. Another way to challenge students is to not provide a graphic organizer for the plan stage at all. This approach requires students draw on prior experiences in planning and carrying out investigations to develop their plan without the scaffold of the graphic organizer.

Updated Text: Added the following paragraph to the end of the Teaching Tip for In-Person Lessons: For students who have peer review feedback with few areas for improvement, we suggest using the more advanced peer review guide. This will provide more in-depth guidance for peer reviewers, leading to additional feedback for students on how to improve their scientific writing. This will also benefit the peer reviewers, by drawing attention to additional criteria on which to evaluate the quality of a written scientific argument.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Handle glass with care. Always wear gloves, a lab coat/apron, and safety goggles when handling glass materials.
- Students should never handle broken glass. Inspect all glass materials prior to distribution.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Glass: Inspect glass materials for damage before storing. Dispose of any broken glass materials. Follow your school's policy on disposing of broken glass.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Updated Text: Teaching Tip for In-Person Lessons

Be sure to "plant some different ideas" with each group about how to make a strong argument as you move from group to group to check in, answer questions, and offer advice. This strategy helps to ensure that there will be some really strong examples of the evidence and justification components of the argument for students to see and discuss during the next activity. For example, you could help two groups have a really strong evidence component by telling one group, "I think a graph would be really helpful here" and telling another group, "I think your evidence would be stronger if you explained, in words, what this graph shows." You could help a third group have a really strong justification by saying, "Let's brainstorm some ideas that will help you defend your choice of evidence," or "Let's go back to our Ideas handout and see if there are any concepts we can include."

It is important that you make sure that all the arguments are different at this point in time because the students will have nothing to critique or discuss during the next activity if they all have the same argument. The goal during this activity is to set the stage for the next activity by ensuring that the various components of a strong argument can be found on different whiteboards within the class. These strong components will then be taken up by all the groups because they reflect good ideas. Be sure to give students a voice and choice during this activity, so they can make mistakes and learn from them.

One way to do a quick check-in with a group and plant some different ideas during this activity is to use the "two questions, a nudge, and a goal" technique. This technique includes the following steps:

1. Sit down with a group of students.
2. Ask, "Would one of you tell me a little about what you all have been doing or thinking about?" (question 1)
3. A student answers on behalf of the group.
4. Ask, "Would anyone else like to add anything to that?" (question 2)
5. A different student provides additional information on behalf of the group.
6. Say, "Have you thought about [a hint or something you want to highlight]"? (a nudge)
7. Say, "Okay, I'm going to check on the other groups. When I get back, I want to see [something that you want the group to accomplish]." (a goal)

When you have completed the check-in with one group, move on to the next group.

It is often helpful to assign and change roles at least once during this activity. For example, you might assign the 1s to be "in charge of writing" at the beginning of the activity. You can then easily switch roles about 10 minutes into the activity by saying, "1s, please hand the pen to the 2s. 2s, you are now in charge of writing for the group." By changing roles, you can ensure that all students have a chance to participate and contribute their ideas to the creation of a draft argument.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

You can also assign students with one number to pick up the supplies at the beginning of the activity and students with another number to return them at the end of the activity.

Be sure to intentionally group emerging multilingual students at times with peers who know the same languages as they do and at other times with peers whose English language development is slightly more advanced. Thoughtful grouping that varies throughout an investigation allows emerging multilingual students to benefit from the different linguistic resources of their peers.

Updated Text: Teaching Tip for In-Person Lessons

We suggest creating a wonder wall where you can write down things students wonder about in response to the phenomenon. A wonder wall ensures that all students questions about the phenomenon are acknowledged as valid and their contributions to class discourse are valued. The wonder wall also provides resources for extension activities for students in the Do and Share stage.

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Double-check the area surrounding the workstation to make sure that any materials that fell during the investigation are picked up.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Guide.

For those groups who may respond well to a more challenging learning experience, you can use one of the additional Plan stage graphic organizers included as an appendix in the Teacher Implementation Guide. These additional Plan stage graphic organizers ask students to think about a bit more information during their investigation. For example, one of the graphic organizers asks students to make an explicit hypothesis prior to beginning the investigation. Another way to challenge students is to not provide a graphic organizer for the plan stage at all. This approach requires students draw on prior experiences in planning and carrying out investigations to develop their plan without the scaffold of the graphic organizer.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Rubber Gloves

Additional safety considerations for this investigation include:

- Always wear rubber gloves when handling wires/batteries
- Inspect batteries for acid/corrosion prior to distribution. Battery acid is a harmful substance. Dispose of any batteries with visible acid/corrosion.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

<https://d1yqpar94jqbqm.cloudfront.net/documents/TexasEducationAgencyTexasSafetyStandards.pdf>

Updated Text: Safety Considerations  
Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-latex Gloves
- Heat-Insulated Gloves
- Safety Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Wear heat-insulated gloves, or use tongs if available, while handling hot substances. Turn off heat sources when not in use.
- Students should wear safety goggles and lab coats/aprons at all times when liquids are present in the work area.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

<https://d1yqpar94jqbqm.cloudfront.net/documents/TexasEducationAgencyTexasSafetyStandards.pdf>

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:

Moving between groups also provides an important opportunity for formative assessment.. You should take notes on what students understand and what they remain unclear on. The next stage (Share) provides an opportunity for reteaching those topics students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-latex Gloves
- Goggles
- La Coat/Apron

Additional safety considerations for this investigation include:

- Students should wear safety goggles and lab coats/aprons at all times when liquids are present in the work area

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Updated Text: Added the following paragraphs to the end of the Teaching Tip for In-Person Lessons:

For more specific guidance on how to work with students at different levels of English language proficiency, as defined by the ELPS, we suggest consulting the section on supporting emerging multilingual students in the Teacher Implementation Guide.

For those groups who may respond well to a more challenging learning experience, you can use one of the additional Plan stage graphic organizers included as an appendix in the Teacher Implementation Guide. These additional Plan stage graphic organizers ask students to think about a bit more information during their investigation. For example, one of the graphic organizers asks students to make an explicit hypothesis prior to beginning the investigation. Another way to challenge students is to not provide a graphic organizer for the plan stage at all. This approach requires students draw on prior experiences in planning and carrying out investigations to develop their plan without the scaffold of the graphic organizer.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Recommended safety materials for this investigation include:

- Non-latex Gloves
- Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Food coloring: not a hazardous substance. In case of contact with eyes, rinse immediately with plenty of water and seek medical advice. After contact with skin, wash immediately with plenty of water. [https://www.flinnsci.com/sds\\_843-vegetable-food-dyes/sds\\_843/](https://www.flinnsci.com/sds_843-vegetable-food-dyes/sds_843/)
- Although dyes/food coloring are not hazardous materials, they should still be handled with care. Dyes may stain clothing. In event of contact with eye, rinse eyes at eye wash station for 15 minutes.
- Students should wear safety goggles and lab coats/aprons at all times when liquids are present in the work area.
- Students should never handle broken glass. Inspect all glass materials prior to distribution.
- Fallen Marbles may present a trip/slip hazard. Instruct students to be careful to confine materials to the work area and tread with care when these materials are present.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:

It is important to listen to the conversations of several groups when they are talking over what they read at the end of this activity. Listening to the conversations is an opportunity for formative assessment as students are processing the readings. You should take notes on what students understand and what they remain unclear on. The final activity of this stage provides an opportunity to reteach those concepts students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Current Page Number(s): Pages 41-48 of the updated Teacher Implementation Guide

Location: Section Titled "Differentiation of Instruction for Students with Different Needs."

Link to Updated Content:

[View Updated Content](#)

Original Text: New Content

Updated Text: Added a new section on differentiation of instruction. The section begins on page 41 and ends on page 48, This content was added in response to feedback during the Texas Resource Review. The section on differentiation includes the following five subsections:

1. Meaningful, Rigorous, and Equitable by Design (p. 41-42)
2. Modification to instructional materials (p. 42-43)
3. Accommodation Embedded into the Instructional Materials (p. 43-44)
4. Additional Accommodations (p. 44-45)
5. Supporting Emerging Multilingual Students (p. 45-48)

The subsection on supporting emerging multilingual students provides information on accommodating students in each of the 4 domains of English Language Proficiency at each level of proficiency, as defined by the ELPS.

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Batteries: During clean-up, remove batteries from circuits/devices to mitigate risk of corrosion/acid leak. Store batteries securely.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:

It is important to listen to the conversations of several groups when they are talking over what they read at the end of this activity. Listening to the conversations is an opportunity for formative assessment as students are processing the readings. You should take notes on what students understand and what they remain unclear on. The final activity of this stage provides an opportunity to reteach those concepts students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Dispose of any broken materials, do not store cracked/damaged materials
- Test tubes should be rinsed with water and allowed to dry prior to storing
- Remove batteries/unplug power cords from any electronic materials.
- Allow heat sources to cool prior to storing

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Food Coloring/Dyes: While wearing gloves, wipe down the outsides of the bottles with water and paper towel to clean outside surface prior to storage.
- Glass: Glassware should be rinsed thoroughly with water and dried prior to storage in a secure, enclosed place.
- Glass: Inspect glass materials for damage before storing. Dispose of any broken glass materials. Follow your school's policy on disposing of broken glass.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:

It is important to listen to the conversations of several groups when they are talking over what they read at the end of this activity. Listening to the conversations is an opportunity for formative assessment as students are processing the readings. You should take notes on what students understand and what they remain unclear on. The final activity of this stage provides an opportunity to reteach those concepts students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

Updated Text: Teaching Tip for In-Person Lessons

We suggest creating a wonder wall where you can write down things students wonder about in response to the phenomenon. A wonder wall ensures that all students questions about the phenomenon are acknowledged as valid and their contributions to class discourse are valued. The wonder wall also provides resources for extension activities for students in the Do and Share stage.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-latex Gloves
- Heat-Insulated Gloves
- Safety Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Wear heat-insulated gloves, or use tongs if available, while handling hot substances. Turn off heat sources when not in use.
- Students should wear safety goggles and lab coats/aprons at all times when liquids are present in the work area.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

For more specific guidance on how to work with students at different levels of English language proficiency, as defined by the ELPS, we suggest consulting the section on supporting emerging multilingual students in the Teacher Implementation Guide.

For those groups who may respond well to a more challenging learning experience, you can use one of the additional Plan stage graphic organizers included as an appendix in the Teacher Implementation Guide. These additional Plan stage graphic organizers ask students to think about a bit more information during their investigation. For example, one of the graphic organizers asks students to make an explicit hypothesis prior to beginning the investigation. Another way to challenge students is to not provide a graphic organizer for the plan stage at all. This approach requires students draw on prior experiences in planning and carrying out investigations to develop their plan without the scaffold of the graphic organizer.

Updated Text: Added the following paragraph to the end of the Teaching Tip for In-Person Lessons:

For students who have peer review feedback with few areas for improvement, we suggest using the more advanced peer review guide. This will provide more in-depth guidance for peer reviewers, leading to additional feedback for students on how to improve their scientific writing. This will also benefit the peer reviewers, by drawing attention to additional criteria on which to evaluate the quality of a written scientific argument.

For students who have peer review feedback with few areas for improvement, we suggest using the more advanced peer review guide. This will provide more in-depth guidance for peer reviewers, leading to additional feedback for students on how to improve their scientific writing. This will also benefit the peer reviewers, by drawing attention to additional criteria on which to evaluate the quality of a written scientific argument.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-latex Gloves
- Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Food coloring: not a hazardous substance. In case of contact with eyes, rinse immediately with plenty of water and seek medical advice. After contact with skin, wash immediately with plenty of water. [https://www.flinnsci.com/sds\\_843-vegetable-food-dyes/sds\\_843/](https://www.flinnsci.com/sds_843-vegetable-food-dyes/sds_843/)
- Although dyes/food coloring are not hazardous materials, they should still be handled with care. Dyes may stain clothing. In event of contact with eye, rinse eyes at eye wash station for 15 minutes.
- Students should wear safety goggles and lab coats/aprons at all times when liquids are present in the work area.
- Students should never handle broken glass. Inspect all glass materials prior to distribution.
- Fallen Marbles may present a trip/slip hazard. Instruct students to be careful to confine materials to the work area and tread with care when these materials are present.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

<https://d1yqpar94jqbqm.cloudfront.net/documents/TexasEducationAgencyTexasSafetyStandards.pdf>

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:  
It is important to listen to the conversations of several groups when they are talking over what they read at the end of this activity. Listening to the conversations is an opportunity for formative assessment as students are processing the readings. You should take notes on what students understand and what they remain unclear on. The final activity of this stage provides an opportunity to reteach those concepts students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Wear safety goggles while collecting data

Additional safety considerations for this investigation include:

- Students should be instructed to avoid areas where traffic may be present
- Students should be instructed to remain with a "buddy" at all times
- Supply students with sufficient drinking water
- Students should apply insect repellent and sunscreen before going outdoors
- Confirm that first aid kit is fully supplied, whistles work, etc.
- Prevent overexposure to the sun
- Report any accidents immediately.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Dispose of any broken materials, do not store cracked/damaged materials
- Test tubes should be rinsed with water and allowed to dry prior to storing
- Remove batteries/unplug power cords from any electronic materials.
- Allow heat sources to cool prior to storing

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Food Coloring/Dyes: While wearing gloves, wipe down the outsides of the bottles with water and paper towel to clean outside surface prior to storage.
- Glass: Glassware should be rinsed thoroughly with water and dried prior to storage in a secure, enclosed place.
- Glass: Inspect glass materials for damage before storing. Dispose of any broken glass materials. Follow your school's policy on disposing of broken glass.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:

It is important to listen to the conversations of several groups when they are talking over what they read at the end of this activity. Listening to the conversations is an opportunity for formative assessment as students are processing the readings. You should take notes on what students understand and what they remain unclear on. The final activity of this stage provides an opportunity to reteach those concepts students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

Updated Text: Added the following paragraph to the end of the Teaching Tip for In-Person Lessons:  
For students who have peer review feedback with few areas for improvement, we suggest using the more advanced peer review guide. This will provide more in-depth guidance for peer reviewers, leading to additional feedback for students on how to improve their scientific writing. This will also benefit the peer reviewers, by drawing attention to additional criteria on which to evaluate the quality of a written scientific argument.

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Account for all supplies before returning to the classroom.
- Upon returning to the classroom, all students should wash their hands thoroughly with soap and water.
- Return all supplies to their designated storage spaces.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Additional safety considerations for this investigation include:

- Fallen Beads may present a trip/slip hazard. Be careful to keep your materials in your work area and be careful walking around your classroom when these materials are present.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

<https://d1yqpar94jqbqm.cloudfront.net/documents/TexasEducationAgencyTexasSafetyStandards.pdf>

For more specific guidance on how to work with students at different levels of English language proficiency, as defined by the ELPS, we suggest consulting the section on supporting emerging multilingual students in the Teacher Implementation Guide.

For those groups who may respond well to a more challenging learning experience, you can use one of the additional Plan stage graphic organizers included as an appendix in the Teacher Implementation Guide. These additional Plan stage graphic organizers ask students to think about a bit more information during their investigation. For example, one of the graphic organizers asks students to make an explicit hypothesis prior to beginning the investigation. Another way to challenge students is to not provide a graphic organizer for the plan stage at all. This approach requires students draw on prior experiences in planning and carrying out investigations to develop their plan without the scaffold of the graphic organizer.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:

It is important to listen to the conversations of several groups when they are talking over what they read at the end of this activity. Listening to the conversations is an opportunity for formative assessment as students are processing the readings. You should take notes on what students understand and what they remain unclear on. The final activity of this stage provides an opportunity to reteach those concepts students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Rubber Gloves
- Safety Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Handle glass with care. Always wear gloves, a lab coat/apron, and safety goggles when handling glass materials.
- Magnets may present a pinch hazard. Instruct students not to place body parts between magnets.
- Magnets may damage electronic devices, cell phones, and computers. Do not hold/place magnets near electronic devices.
- Always wear rubber gloves when handling wires/batteries
- Students should never handle broken glass. Inspect all glass materials prior to distribution.
- Fallen Beads/BBs/Marbles/Shot may present a trip/slip hazard. Instruct students to be careful to confine materials to the work area and tread with care when these materials are present.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

Link to Updated Content:

[View Updated Content](#)

Original Text: New Content

Updated Text: It is important to administer the Mid-Unit Educative Assessments and end of unit Summative Assessments in a fair and consistent manner. To ensure teachers do so, we have embedded teacher notes into the Learning Hub on how to administer each assessment. Following these teacher notes will ensure that each assessment is administered in the same way to all students. In the next section, we also provide details on how to assign Q&A assessments, Mid-Unit Educative Assessments, and end of unit Summative Assessments.

When assigning any assessments, teachers must be mindful of any required accommodations for students with different needs. The assessment system can be configured to provide additional time or other supports for students that are entitled to such accommodations. Upon assigning an assessment to a class, the teacher can then change the due date for students in accordance with any time requirements. The immersive reader is also embedded into the assessments, so students can utilize the language functions if needed.

In general, we suggest that when administering assessments, teachers should always defer to any district or school rules. Teachers must follow any required accommodations for an individual student.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:

It is important to listen to the conversations of several groups when they are talking over what they read at the end of this activity. Listening to the conversations is an opportunity for formative assessment as students are processing the readings. You should take notes on what students understand and what they remain unclear on. The final activity of this stage provides an opportunity to reteach those concepts students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Wear safety goggles while collecting data

Additional safety considerations for this investigation include:

- Students should be instructed to avoid areas where traffic may be present
- Students should be instructed to remain with a "buddy" at all times
- Supply students with sufficient drinking water
- Students should apply insect repellent and sunscreen before going outdoors
- Confirm that first aid kit is fully supplied, whistles work, etc.
- Prevent overexposure to the sun
- Report any accidents immediately.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

<https://d1yqpar94jqbqm.cloudfront.net/documents/TexasEducationAgencyTexasSafetyStandards.pdf>

For those groups who may respond well to a more challenging learning experience, you can use one of the additional Plan stage graphic organizers included as an appendix in the Teacher Implementation Guide. These additional Plan stage graphic organizers ask students to think about a bit more information during their investigation. For example, one of the graphic organizers asks students to make an explicit hypothesis prior to beginning the investigation. Another way to challenge students is to not provide a graphic organizer for the plan stage at all. This approach requires students draw on prior experiences in planning and carrying out investigations to develop their plan without the scaffold of the graphic organizer.

disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Account for all supplies before returning to the classroom.
- Upon returning to the classroom, all students should wash their hands thoroughly with soap and water.
- Return all supplies to their designated storage spaces.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Updated Text: Teaching Tip for In-Person Lessons

We suggest creating a wonder wall where you can write down things students wonder about in response to the phenomenon. A wonder wall ensures that all students questions about the phenomenon are acknowledged as valid and their contributions to class discourse are valued. The wonder wall also provides resources for extension activities for students in the Do and Share stage.

Updated Text: Added the following paragraph to the end of the Teaching Tip for In-Person Lessons:  
For students who have peer review feedback with few areas for improvement, we suggest using the more advanced peer review guide. This will provide more in-depth guidance for peer reviewers, leading to additional feedback for students on how to improve their scientific writing. This will also benefit the peer reviewers, by drawing attention to additional criteria on which to evaluate the quality of a written scientific argument.

Original Text: New Content

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:

It is important to listen to the conversations of several groups when they are talking over what they read at the end of this activity. Listening to the conversations is an opportunity for formative assessment as students are processing the readings. You should take notes on what students understand and what they remain unclear on. The final activity of this stage provides an opportunity to reteach those concepts students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Glass: Glassware should be rinsed thoroughly with water and dried prior to storage in a secure, enclosed place.
- Glass: Inspect glass materials for damage before storing. Dispose of any broken glass materials. Follow your school's policy on disposing of broken glass.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Safety Goggles

Additional safety considerations for this investigation include:

- Fallen materials may present a trip/slip hazard. Instruct students to be careful to confine materials to the work area and tread with care when these materials are present, and to clean up any materials that fall on the ground immediately.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

<https://d1yqpar94jqbqm.cloudfront.net/documents/TexasEducationAgencyTexasSafetyStandards.pdf>

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Additional safety considerations for this investigation include:

- Fallen Beads may present a trip/slip hazard. Be careful to keep your materials in your work area and be careful walking around your classroom when these materials are present.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

Updated Text: Added the following paragraph to the end of the Teaching Tip for In-Person Lessons:

For those groups who may have finished early, you can use the questions posted to the wonder wall you created earlier in the investigation as an extension activity. We suggest having those groups pick a question from the wonder wall and use this time to collect data in order to answer that question as well. You should help the group choose a question that is appropriate for the amount of time remaining as well as the available equipment for data collection.

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:

It is important to listen to the conversations of several groups when they are talking over what they read at the end of this activity. Listening to the conversations is an opportunity for formative assessment as students are processing the readings. You should take notes on what students understand and what they remain unclear on. The final activity of this stage provides an opportunity to reteach those concepts students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Rubber Gloves
- Safety Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Handle glass with care. Always wear gloves, a lab coat/apron, and safety goggles when handling glass materials.
- Magnets may present a pinch hazard. Instruct students not to place body parts between magnets.
- Magnets may damage electronic devices, cell phones, and computers. Do not hold/place magnets near electronic devices.
- Always wear rubber gloves when handling wires/batteries
- Students should never handle broken glass. Inspect all glass materials prior to distribution.
- Fallen Beads/BBs/Marbles/Shot may present a trip/slip hazard. Instruct students to be careful to confine materials

to the work area and tread with care when these materials are present.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

<https://d1yqpar94jqbqm.cloudfront.net/documents/TexasEducationAgencyTexasSafetyStandards.pdf>

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Original Text: New Content

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-latex Gloves
- Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Students should wear safety goggles and lab coats/aprons at all times when particulates are present in the work area (sand, powder, etc.)
- Handle glass with care. Always wear gloves, a lab coat/apron, and safety goggles when handling glass materials.
- Students should never handle broken glass. Inspect all glass materials prior to distribution.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Updated Text: Clean Up  
Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Double-check the area surrounding the workstation to make sure that any materials that fell during the investigation are picked up.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

For those groups who may respond well to a more challenging learning experience, you can use one of the additional Plan stage graphic organizers included as an appendix in the Teacher Implementation Guide. These additional Plan stage graphic organizers ask students to think about a bit more information during their investigation. For example, one of the graphic organizers asks students to make an explicit hypothesis prior to beginning the investigation. Another way to challenge students is to not provide a graphic organizer for the plan stage at all. This approach requires students draw on prior experiences in planning and carrying out investigations to develop their plan without the scaffold of the graphic organizer.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Make sure to clean work area with care, collecting any beads that may have fallen to avoid slip/fall hazards.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:  
It is important to listen to the conversations of several groups when they are talking over what they read at the end of this activity. Listening to the conversations is an opportunity for formative assessment as students are processing the readings. You should take notes on what students understand and what they remain unclear on. The final activity of this stage provides an opportunity to reteach those concepts students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Glass: Inspect glass materials for damage before storing. Dispose of any broken glass materials. Follow your school's policy on disposing of broken glass.
- Magnets: Magnets may damage electronic devices, cell phones, and computers. Do not place/store magnets near electronic devices.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Updated Text: Teaching Tip for In-Person Lessons

We suggest creating a wonder wall where you can write down things students wonder about in response to the phenomenon. A wonder wall ensures that all students questions about the phenomenon are acknowledged as valid and their contributions to class discourse are valued. The wonder wall also provides resources for extension activities for students in the Do and Share stage.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Safety Goggles

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Additional safety considerations for this investigation include:

- Fallen materials may present a trip/slip hazard. Instruct students to be careful to confine materials to the work area and tread with care when these materials are present, and to clean up any materials that fall on the ground immediately.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

<https://d1yqpar94jqbqm.cloudfront.net/documents/TexasEducationAgencyTexasSafetyStandards.pdf>

Updated Text: Added the following paragraph to the end of the Teaching Tip for In-Person Lessons:

For students who have peer review feedback with few areas for improvement, we suggest using the more advanced peer review guide. This will provide more in-depth guidance for peer reviewers, leading to additional feedback for students on how to improve their scientific writing. This will also benefit the peer reviewers, by drawing attention to additional criteria on which to evaluate the quality of a written scientific argument.

For those groups who may respond well to a more challenging learning experience, you can use one of the additional Plan stage graphic organizers included as an appendix in the Teacher Implementation Guide. These additional Plan stage graphic organizers ask students to think about a bit more information during their investigation. For example, one of the graphic organizers asks students to make an explicit hypothesis prior to beginning the investigation. Another way to challenge students is to not provide a graphic organizer for the plan stage at all. This approach requires students draw on prior experiences in planning and carrying out investigations to develop their plan without the scaffold of the graphic organizer.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-latex Gloves

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

- Heat Insulated Gloves
- Safety Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Handle hot glue gun with care.
- Instructors should control and supervise the use of sharp tools (e.g. safety box cutters, snippers, scissors, wire cutters)

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Safety considerations for this investigation include:

- Magnets may present a pinch hazard. Instruct students not to place body parts between magnets.
- Magnets may damage electronic devices, cell phones, and computers. Do not hold/place magnets near electronic devices.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:

It is important to listen to the conversations of several groups when they are talking over what they read at the end of this activity. Listening to the conversations is an opportunity for formative assessment as students are processing the readings. You should take notes on what students understand and what they remain unclear on. The final activity of this stage provides an opportunity to reteach those concepts students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Double-check the area surrounding the workstation to make sure that any materials that fell during the investigation are picked up.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

For more specific guidance on how to work with students at different levels of English language proficiency, as defined by the ELPS, we suggest consulting the section on supporting emerging multilingual students in the Teacher Implementation Guide.

For those groups who may respond well to a more challenging learning experience, you can use one of the additional Plan stage graphic organizers included as an appendix in the Teacher Implementation Guide. These additional Plan stage graphic organizers ask students to think about a bit more information during their investigation. For example, one of the graphic organizers asks students to make an explicit hypothesis prior to beginning the investigation. Another way to challenge students is to not provide a graphic organizer for the plan stage at all. This approach requires students draw on prior experiences in planning and carrying out investigations to develop their plan without the scaffold of the graphic organizer.

Original Text: New Content

Updated Text: The third activity of this stage is important because students' prior knowledge and experiences related to the phenomenon or problem should always be used as a starting point for student sense-making. The development of initial models on their own helps to make each individual student's ideas visible so teachers can learn more about each student's thinking. With this information the teacher can make modification to the lesson as needed and, most importantly, leverage the prior knowledge and experiences of the students in their classes as a useful tool for figuring why something happens in the world around them or to develop a solution to the problem. The generation of a list of "things we need to learn more about" also help student identify gaps in their understand and create a desire to learn.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Additional safety considerations for this investigation include:

- Fallen Beads/BBs/Marbles/Shot may present a trip/slip hazard. Instruct students to be careful to confine materials to the work area and tread with care when these materials are present.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

<https://d1yqpar94jqbqm.cloudfront.net/documents/TexasEducationAgencyTexasSafetyStandards.pdf>

Updated Text: Added the following paragraph to the end of the Teaching Tip for In-Person Lessons:

For students who have peer review feedback with few areas for improvement, we suggest using the more advanced peer review guide. This will provide more in-depth guidance for peer reviewers, leading to additional feedback for students on how to improve their scientific writing. This will also benefit the peer reviewers, by drawing attention to additional criteria on which to evaluate the quality of a written scientific argument.

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Magnets: Magnets may damage electronic devices, cell phones, and computers. Do not place/store magnets near electronic devices.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Original Text: New Content

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Safety considerations for this investigation include:

- Magnets may present a pinch hazard. Instruct students not to place body parts between magnets.
- Magnets may damage electronic devices, cell phones, and computers. Do not hold/place magnets near electronic devices.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

<https://d1yqpar94jqbqm.cloudfront.net/documents/TexasEducationAgencyTexasSafetyStandards.pdf>

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:

It is important to listen to the conversations of several groups when they are talking over what they read at the end of this activity. Listening to the conversations is an opportunity for formative assessment as students are processing the readings. You should take notes on what students understand and what they remain unclear on. The final activity of this stage provides an opportunity to reteach those concepts students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Safety Goggles

Additional safety considerations for this investigation include:

- Fallen materials may present a trip/slip hazard. Instruct students to be careful to confine materials to the work area and tread with care when these materials are present, and to clean up any materials that fall on the ground immediately.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

<https://d1yqpar94jqbqm.cloudfront.net/documents/TexasEducationAgencyTexasSafetyStandards.pdf>

Updated Text: 6. Activities such as (a) introducing a phenomenon, (b) making the guiding question of the investigation explicit, and (c) eliciting students' current ideas about why or how the phenomenon occurs are designed to help students comprehend more of what they read during later stages of the investigation. These activities also encourage students to be active readers who engage with a text on a deeper level because they create a need for student to read to learn and provides them with a framework for making sense of the information found in the text.

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

For more specific guidance on how to work with students at different levels of English language proficiency, as defined by the ELPS, we suggest consulting the section on supporting emerging multilingual students in the Teacher Implementation Guide.

For those groups who may respond well to a more challenging learning experience, you can use one of the additional Plan stage graphic organizers included as an appendix in the Teacher Implementation Guide. These additional Plan stage graphic organizers ask students to think about a bit more information during their investigation. For example, one of the graphic organizers asks students to make an explicit hypothesis prior to beginning the investigation. Another way to challenge students is to not provide a graphic organizer for the plan stage at all. This approach requires students draw on prior experiences in planning and carrying out investigations to develop their plan without the scaffold of the graphic organizer.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-latex Gloves
- Heat Insulated Gloves
- Safety Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Handle hot glue gun with care.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

- Instructors should control and supervise the use of sharp tools (e.g. safety box cutters, snippers, scissors, wire cutters)

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

<https://d1yqpar94jqbqm.cloudfront.net/documents/TexasEducationAgencyTexasSafetyStandards.pdf>

Updated Text: Added the following paragraph to the end of the Teaching Tip for In-Person Lessons:  
For students who have peer review feedback with few areas for improvement, we suggest using the more advanced peer review guide. This will provide more in-depth guidance for peer reviewers, leading to additional feedback for students on how to improve their scientific writing. This will also benefit the peer reviewers, by drawing attention to additional criteria on which to evaluate the quality of a written scientific argument.

Updated Text: Teaching Tip for In-Person Lessons

We suggest creating a wonder wall where you can write down things students wonder about in response to the phenomenon. A wonder wall ensures that all students questions about the phenomenon are acknowledged as valid and their contributions to class discourse are valued. The wonder wall also provides resources for extension activities for students in the Do and Share stage.

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Double-check the area surrounding the workstation to make sure that any materials that fell during the investigation are picked up.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

For more specific guidance on how to work with students at different levels of English language proficiency, as defined by the ELPS, we suggest consulting the section on supporting emerging multilingual students in the Teacher Implementation Guide.

For those groups who may respond well to a more challenging learning experience, you can use one of the additional Plan stage graphic organizers included as an appendix in the Teacher Implementation Guide. These additional Plan stage graphic organizers ask students to think about a bit more information during their investigation. For example, one of the graphic organizers asks students to make an explicit hypothesis prior to beginning the investigation. Another way to challenge students is to not provide a graphic organizer for the plan stage at all. This approach requires students draw on prior experiences in planning and carrying out investigations to develop their plan without the scaffold of the graphic organizer.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Additional safety considerations for this investigation include:

- Fallen Beads/BBs/Marbles/Shot may present a trip/slip hazard. Instruct students to be careful to confine materials to the work area and tread with care when these materials are present.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

<https://d1yqpar94jqbqm.cloudfront.net/documents/TexasEducationAgencyTexasSafetyStandards.pdf>

Updated Text: Teaching Tip for In-Person Lessons

We suggest creating a wonder wall where you can write down things students wonder about in response to the phenomenon. A wonder wall ensures that all students questions about the phenomenon are acknowledged as valid and their contributions to class discourse are valued. The wonder wall also provides resources for extension activities for students in the Do and Share stage.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

- Goggles
- Lab Coat/Apron
- Insulated Gloves

Additional safety considerations for this investigation include:

- Handle glass with care. Always wear gloves, a lab coat/apron, and safety goggles when handling glass materials.
- Wear heat-insulated gloves, or use tongs if available, while handling hot substances. Turn off heat sources when not in use.
- Students should wear safety goggles and lab coats/aprons at all times when liquids are present in the work area.
- Students should never handle broken glass. Inspect all glass materials prior to distribution.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

<https://d1yqpar94jqbqm.cloudfront.net/documents/TexasEducationAgencyTexasSafetyStandards.pdf>

For those groups who may respond well to a more challenging learning experience, you can use one of the additional Plan stage graphic organizers included as an appendix in the Teacher Implementation Guide. These additional Plan stage graphic organizers ask students to think about a bit more information during their investigation. For example, one of the graphic organizers asks students to make an explicit hypothesis prior to beginning the investigation. Another way to challenge students is to not provide a graphic organizer for the plan stage at all. This approach requires students draw on prior experiences in planning and carrying out investigations to develop their plan without the scaffold of the graphic organizer.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

- Non-Latex Gloves
- Lab Coat/Apron
- Goggles

Additional safety considerations for this investigation include:

- Handle glass with care. Always wear gloves, a lab coat/apron, and safety goggles when handling glass materials.
- Students should never handle broken glass. Inspect all glass materials prior to distribution.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

<https://d1yqpar94jqbqm.cloudfront.net/documents/TexasEducationAgencyTexasSafetyStandards.pdf>

Updated Text: Teaching Tip for In-Person Lessons

We suggest creating a wonder wall where you can write down things students wonder about in response to the phenomenon. A wonder wall ensures that all students questions about the phenomenon are acknowledged as valid and their contributions to class discourse are valued. The wonder wall also provides resources for extension activities for students in the Do and Share stage.

Updated Text: Added a section on how to foster connections between home and school. This section begins on page 60 and ends on page 62 of the updated Teacher Implementation Guide. Content was added in response to feedback during the Texas Resource Review. The section of fostering connections between home and school includes the following two subsections:

1. Parent or Caregiver Letter
2. Meetings with Parents or Caregivers

Updated Text: Added the following paragraph to the end of the Teaching Tip for In-Person Lessons:  
For those groups who may have finished early, you can use the questions posted to the wonder wall you created earlier in the investigation as an extension activity. We suggest having those groups pick a question from the wonder wall and use this time to collect data in order to answer that question as well. You should help the group choose a question that is appropriate for the amount of time remaining as well as the available equipment for data collection.

Updated Text: Teaching Tip for In-Person Lessons  
We suggest creating a wonder wall where you can write down things students wonder about in response to the phenomenon. A wonder wall ensures that all students questions about the phenomenon are acknowledged as valid and their contributions to class discourse are valued. The wonder wall also provides resources for extension activities for students in the Do and Share stage.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-latex Gloves
- Gloves
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Students should wear safety goggles and lab coats/aprons at all times when liquids are present in the work area.
- Although dyes/food coloring are not hazardous materials, they should still be handled with care. Dyes may stain clothing. In event of contact with eye, rinse eyes at eye wash station for 15 minutes. Refer to the following SDS to familiarize yourself with appropriate first aid measures: [https://www.flinnsci.com/sds\\_843-vegetable-food-dyes/sds\\_843/](https://www.flinnsci.com/sds_843-vegetable-food-dyes/sds_843/)

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

<https://d1yqpar94jqbqm.cloudfront.net/documents/TexasEducationAgencyTexasSafetyStandards.pdf>

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Glass: Glassware should be rinsed thoroughly with water and dried prior to storage in a secure, enclosed place.
- Glass: Inspect glass materials for damage before storing. Dispose of any broken glass materials. Follow your school's policy on disposing of broken glass.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

For more specific guidance on how to work with students at different levels of English language proficiency, as defined by the ELPS, we suggest consulting the section on supporting emerging multilingual students in the Teacher Implementation Guide.

For those groups who may respond well to a more challenging learning experience, you can use one of the additional Plan stage graphic organizers included as an appendix in the Teacher Implementation Guide. These additional Plan stage graphic organizers ask students to think about a bit more information during their investigation. For example, one of the graphic organizers asks students to make an explicit hypothesis prior to beginning the investigation. Another way to challenge students is to not provide a graphic organizer for the plan stage at all. This approach requires students draw on prior experiences in planning and carrying out investigations to develop their plan without the scaffold of the graphic organizer.

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:

Moving between groups also provides an important opportunity for formative assessment.. You should take notes on what students understand and what they remain unclear on. The next stage (Share) provides an opportunity for reteaching those topics students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

Updated Text: Added the following paragraph to the end of the Teaching Tip for In-Person Lessons:  
For students who have peer review feedback with few areas for improvement, we suggest using the more advanced peer review guide. This will provide more in-depth guidance for peer reviewers, leading to additional feedback for students on how to improve their scientific writing. This will also benefit the peer reviewers, by drawing attention to additional criteria on which to evaluate the quality of a written scientific argument.

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Glass: Glassware should be rinsed thoroughly with water and dried prior to storage in a secure, enclosed place.
- Glass: Inspect glass materials for damage before storing. Dispose of any broken glass materials. Follow your school's policy on disposing of broken glass.

These clean up procedures should be detailed for students before they begin working with the materials. We also

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Food Coloring/Dyes: While wearing gloves, wipe down the outsides of the bottles with water and paper towel to clean outside surface prior to storage.
- Seeds or live plants should be stored according to supplier instructions. Seeds and live plants may be discarded normally.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-latex Gloves
- Gloves
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Students should wear safety goggles and lab coats/aprons at all times when liquids are present in the work area.
- Although dyes/food coloring are not hazardous materials, they should still be handled with care. Dyes may stain clothing. In event of contact with eye, rinse eyes at eye wash station for 15 minutes. Refer to the following SDS to familiarize yourself with appropriate first aid measures: [https://www.flinnsci.com/sds\\_843-vegetable-food-dyes/sds\\_843/](https://www.flinnsci.com/sds_843-vegetable-food-dyes/sds_843/)

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

[View Updated Content](#)

Original Text: New Content

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:

Moving between groups also provides an important opportunity for formative assessment.. You should take notes on what students understand and what they remain unclear on. The next stage (Share) provides an opportunity for reteaching those topics students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

Updated Text: Teaching Tip for In-Person Lessons

We suggest creating a wonder wall where you can write down things students wonder about in response to the phenomenon. A wonder wall ensures that all students questions about the phenomenon are acknowledged as valid and their contributions to class discourse are valued. The wonder wall also provides resources for extension activities for students in the Do and Share stage.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Goggles
- Lab Coat/Apron
- Insulated Gloves

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Additional safety considerations for this investigation include:

- Handle glass with care. Always wear gloves, a lab coat/apron, and safety goggles when handling glass materials.
- Wear heat-insulated gloves, or use tongs if available, while handling hot substances. Turn off heat sources when not in use.
- Students should wear safety goggles and lab coats/aprons at all times when liquids are present in the work area.
- Students should never handle broken glass. Inspect all glass materials prior to distribution.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

Updated Text: Added the following paragraph to the end of the Teaching Tip for In-Person Lessons:

For those groups who may have finished early, you can use the questions posted to the wonder wall you created earlier in the investigation as an extension activity. We suggest having those groups pick a question from the wonder wall and use this time to collect data in order to answer that question as well. You should help the group choose a question that is appropriate for the amount of time remaining as well as the available equipment for data collection.

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:

It is important to listen to the conversations of several groups when they are talking over what they read at the end of this activity. Listening to the conversations is an opportunity for formative assessment as students are processing the readings. You should take notes on what students understand and what they remain unclear on. The final activity of this stage provides an opportunity to reteach those concepts students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

Updated Text: Added the following paragraph to the end of the Teaching Tip for In-Person Lessons:

For students who have peer review feedback with few areas for improvement, we suggest using the more advanced peer review guide. This will provide more in-depth guidance for peer reviewers, leading to additional feedback for students on how to improve their scientific writing. This will also benefit the peer reviewers, by drawing attention to additional criteria on which to evaluate the quality of a written scientific argument.

Updated Text: Added the following paragraphs to the end of the Teaching Tip for In-Person Lessons:

For more specific guidance on how to work with students at different levels of English language proficiency, as defined by the ELPS, we suggest consulting the section on supporting emerging multilingual students in the Teacher Implementation Guide.

For those groups who may respond well to a more challenging learning experience, you can use one of the additional Plan stage graphic organizers included as an appendix in the Teacher Implementation Guide. These additional Plan stage graphic organizers ask students to think about a bit more information during their investigation. For example, one of the graphic organizers asks students to make an explicit hypothesis prior to beginning the investigation. Another way to challenge students is to not provide a graphic organizer for the plan stage at all. This approach requires students draw on prior experiences in planning and carrying out investigations to develop their plan without the scaffold of the graphic organizer.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Original Text: New Content

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:

Moving between groups also provides an important opportunity for formative assessment.. You should take notes on what students understand and what they remain unclear on. The next stage (Share) provides an opportunity for reteaching those topics students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Food Coloring/Dyes: While wearing gloves, wipe down the outsides of the bottles with water and paper towel to clean outside surface prior to storage.
- Seeds or live plants should be stored according to supplier instructions. Seeds and live plants may be discarded normally.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Updated Text: Teaching Tip for In-Person Lessons

We suggest creating a wonder wall where you can write down things students wonder about in response to the phenomenon. A wonder wall ensures that all students questions about the phenomenon are acknowledged as valid and their contributions to class discourse are valued. The wonder wall also provides resources for extension activities for students in the Do and Share stage.

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Thoroughly inspect the ground near work areas to ensure any fallen materials or spills have been cleaned up

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Updated Text: Added the following paragraph to the end of the Teaching Tip for In-Person Lessons:

For those groups who may have finished early, you can use the questions posted to the wonder wall you created earlier in the investigation as an extension activity. We suggest having those groups pick a question from the wonder wall and use this time to collect data in order to answer that question as well. You should help the group choose a question that is appropriate for the amount of time remaining as well as the available equipment for data collection.

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Updated Text: Added the following paragraph to the end of the Teaching Tip for In-Person Lessons:

For students who have peer review feedback with few areas for improvement, we suggest using the more advanced peer review guide. This will provide more in-depth guidance for peer reviewers, leading to additional feedback for students on how to improve their scientific writing. This will also benefit the peer reviewers, by drawing attention to additional criteria on which to evaluate the quality of a written scientific argument.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-latex Gloves
- Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Students should wear safety goggles and lab coats/aprons at all times when particulates are present in the work area (sand, powder, etc.)

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

<https://d1yqpar94jqbqm.cloudfront.net/documents/TexasEducationAgencyTexasSafetyStandards.pdf>

Updated Text: Added the following paragraphs to the end of the Teaching Tip for In-Person Lessons:  
For more specific guidance on how to work with students at different levels of English language proficiency, as defined by the ELPS, we suggest consulting the section on supporting emerging multilingual students in the Teacher Implementation Guide.

For those groups who may respond well to a more challenging learning experience, you can use one of the additional Plan stage graphic organizers included as an appendix in the Teacher Implementation Guide. These additional Plan stage graphic organizers ask students to think about a bit more information during their investigation. For example, one of the graphic organizers asks students to make an explicit hypothesis prior to beginning the investigation. Another way to challenge students is to not provide a graphic organizer for the plan stage at all. This approach requires students draw on prior experiences in planning and carrying out investigations to develop their plan without the scaffold of the graphic organizer.

Updated Text: Added the following paragraph to the end of the Teaching Tip for In-Person Lessons:  
For students who have peer review feedback with few areas for improvement, we suggest using the more advanced peer review guide. This will provide more in-depth guidance for peer reviewers, leading to additional feedback for students on how to improve their scientific writing. This will also benefit the peer reviewers, by drawing attention to additional criteria on which to evaluate the quality of a written scientific argument.

Updated Text: The third activity of this stage is important because students' prior knowledge and experiences related to the phenomenon or problem should always be used as a starting point for student sense-making. The development of initial models on their own helps to make each individual student's ideas visible so teachers can learn more about each student's thinking. With this information the teacher can make modification to the lesson as needed and, most importantly, leverage the prior knowledge and experiences of the students in their classes as a useful tool for figuring why something happens in the world around them or to develop a solution to the problem. The generation of a list of "things we need to learn more about" also help student identify gaps in their understand and create a desire to learn.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-latex Gloves
- Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Handle glass with care. Always wear gloves, a lab coat/apron, and safety goggles when handling glass materials.
- Students should wear safety goggles and lab coats/aprons at all times when liquids are present in the work area.
- Students should wear safety goggles and lab coats/aprons at all times when particulates are present in the work area (sand, powder, etc.)
- Students should never handle broken glass. Inspect all glass materials prior to distribution.
- Seeds: follow handling instructions from supplier.
- Water Beads: are a non-hazardous material. Refer to the SDS link provided to familiarize yourself with first aid measures [https://www.flinnsci.com/sds\\_363.51-water-marbles/sds\\_363.51/](https://www.flinnsci.com/sds_363.51-water-marbles/sds_363.51/)

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:

Moving between groups also provides an important opportunity for formative assessment.. You should take notes on what students understand and what they remain unclear on. The next stage (Share) provides an opportunity for reteaching those topics students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Updated Text: Added detailed explanation of the introductory phenomenon for this investigation to the "Investigation Information and Standards Alignment" Document. Click the URL for Updated Text (make sure to sign into ADI Review Site First: Password is ADITEARev2024!). Download PDF file under heading "Investigation Standards PDF." Open the file. New content is under the heading "Explanation of the phenomenon."

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-latex Gloves
- Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Students should wear safety goggles and lab coats/aprons at all times when liquids are present in the work area.
- Students should never handle broken glass. Inspect all glass materials prior to distribution.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

<https://d1yqpar94jqbqm.cloudfront.net/documents/TexasEducationAgencyTexasSafetyStandards.pdf>

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Heat-Insulated Gloves
- Safety Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Handle liquids with care. Always wear gloves, a lab coat/apron, and safety goggles when handling liquids.
- Wear heat-insulated gloves when handling hot glue or hot water.
- Instructors should control and supervise the use of sharp tools (e.g. safety box cutters, snippers, scissors, wire cutters)

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

Updated Text: Added the following paragraph to the end of the Teaching Tip for In-Person Lessons:  
For those groups who may have finished early, you can use the questions posted to the wonder wall you created earlier in the investigation as an extension activity. We suggest having those groups pick a question from the wonder wall and use this time to collect data in order to answer that question as well. You should help the group choose a question that is appropriate for the amount of time remaining as well as the available equipment for data collection.

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:

It is important to listen to the conversations of several groups when they are talking over what they read at the end of this activity. Listening to the conversations is an opportunity for formative assessment as students are processing the readings. You should take notes on what students understand and what they remain unclear on. The final activity of this stage provides an opportunity to reteach those concepts students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Updated Text: 6. Activities such as (a) introducing a phenomenon, (b) making the guiding question of the investigation explicit, and (c) eliciting students' current ideas about why or how the phenomenon occurs are designed to help students comprehend more of what they read during later stages of the investigation. These activities also encourage students to be active readers who engage with a text on a deeper level because they create a need for student to read to learn and provides them with a framework for making sense of the information found in the text.

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Glass: Glassware should be rinsed thoroughly with water and dried prior to storage in a secure, enclosed place.
- Glass: Inspect glass materials for damage before storing. Dispose of any broken glass materials. Follow your school's policy on disposing of broken glass.
- Seeds or live plants should be stored according to supplier instructions. Seeds and live plants may be discarded normally.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:

It is important to listen to the conversations of several groups when they are talking over what they read at the end of this activity. Listening to the conversations is an opportunity for formative assessment as students are processing the readings. You should take notes on what students understand and what they remain unclear on. The final activity of this stage provides an opportunity to reteach those concepts students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

For those groups who may respond well to a more challenging learning experience, you can use one of the additional Plan stage graphic organizers included as an appendix in the Teacher Implementation Guide. These additional Plan stage graphic organizers ask students to think about a bit more information during their investigation. For example, one of the graphic organizers asks students to make an explicit hypothesis prior to beginning the investigation. Another way to

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

challenge students is to not provide a graphic organizer for the plan stage at all. This approach requires students draw on prior experiences in planning and carrying out investigations to develop their plan without the scaffold of the graphic organizer.

Updated Text: Added the following paragraph to the end of the Teaching Tip for In-Person Lessons:

For students who have peer review feedback with few areas for improvement, we suggest using the more advanced peer review guide. This will provide more in-depth guidance for peer reviewers, leading to additional feedback for students on how to improve their scientific writing. This will also benefit the peer reviewers, by drawing attention to additional criteria on which to evaluate the quality of a written scientific argument.

For those groups who may respond well to a more challenging learning experience, you can use one of the additional Plan stage graphic organizers included as an appendix in the Teacher Implementation Guide. These additional Plan stage graphic organizers ask students to think about a bit more information during their investigation. For example, one of the graphic organizers asks students to make an explicit hypothesis prior to beginning the investigation. Another way to challenge students is to not provide a graphic organizer for the plan stage at all. This approach requires students draw on

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-latex Gloves
- Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Students should wear safety goggles and lab coats/aprons at all times when particulates are present in the work area (sand, powder, etc.)

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards

important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-latex Gloves
- Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Handle glass with care. Always wear gloves, a lab coat/apron, and safety goggles when handling glass materials.
- Students should wear safety goggles and lab coats/aprons at all times when liquids are present in the work area.
- Students should wear safety goggles and lab coats/aprons at all times when particulates are present in the work area (sand, powder, etc.)
- Students should never handle broken glass. Inspect all glass materials prior to distribution.
- Seeds: follow handling instructions from supplier.
- Water Beads: are a non-hazardous material. Refer to the SDS link provided to familiarize yourself with first aid measures [https://www.flinnsci.com/sds\\_363.51-water-marbles/sds\\_363.51/](https://www.flinnsci.com/sds_363.51-water-marbles/sds_363.51/)

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:

It is important to listen to the conversations of several groups when they are talking over what they read at the end of this activity. Listening to the conversations is an opportunity for formative assessment as students are processing the readings. You should take notes on what students understand and what they remain unclear on. The final activity of this stage provides an opportunity to reteach those concepts students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-latex Gloves
- Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Students should wear safety goggles and lab coats/aprons at all times when liquids are present in the work area.
- Students should never handle broken glass. Inspect all glass materials prior to distribution.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

<https://d1yqpar94jqbqm.cloudfront.net/documents/TexasEducationAgencyTexasSafetyStandards.pdf>

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Heat-Insulated Gloves
- Safety Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Handle liquids with care. Always wear gloves, a lab coat/apron, and safety goggles when handling liquids.
- Wear heat-insulated gloves when handling hot glue or hot water.
- Instructors should control and supervise the use of sharp tools (e.g. safety box cutters, snippers, scissors, wire cutters)

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Glassware should be rinsed thoroughly with water and dried prior to storage in a secure, enclosed place.
- Inspect glass materials for damage before storing. Dispose of any broken glass materials. Follow your school's policy on disposing of broken glass.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Updated Text: Added the following paragraph to the end of the Teaching Tip for In-Person Lessons:

For students who have peer review feedback with few areas for improvement, we suggest using the more advanced peer review guide. This will provide more in-depth guidance for peer reviewers, leading to additional feedback for students on how to improve their scientific writing. This will also benefit the peer reviewers, by drawing attention to additional criteria on which to evaluate the quality of a written scientific argument.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Original Text: New Content

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:

It is important to listen to the conversations of several groups when they are talking over what they read at the end of this activity. Listening to the conversations is an opportunity for formative assessment as students are processing the readings. You should take notes on what students understand and what they remain unclear on. The final activity of this stage provides an opportunity to reteach those concepts students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

**Component: *Texas ADI Learning Hub for Science, 4th Grade***

ISBN: 9798987754818

Current Page Number(s): Page 21 of the updated Teacher Implementation Guide

Location: Changes begin with the last paragraph on p. 21. This paragraph begins with the sentence "Each group of students creates a draft argument..." The new content continues until the last paragraph of page 23.

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Glass: Glassware should be rinsed thoroughly with water and dried prior to storage in a secure, enclosed place.
- Glass: Inspect glass materials for damage before storing. Dispose of any broken glass materials. Follow your school's policy on disposing of broken glass.
- Seeds or live plants should be stored according to supplier instructions. Seeds and live plants may be discarded normally.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

For more specific guidance on how to work with students at different levels of English language proficiency, as defined by the ELPS, we suggest consulting the section on supporting emerging multilingual students in the Teacher Implementation Guide.

For those groups who may respond well to a more challenging learning experience, you can use one of the additional Plan stage graphic organizers included as an appendix in the Teacher Implementation Guide. These additional Plan stage graphic organizers ask students to think about a bit more information during their investigation. For example, one of the graphic organizers asks students to make an explicit hypothesis prior to beginning the investigation. Another way to challenge students is to not provide a graphic organizer for the plan stage at all. This approach requires students draw on prior experiences in planning and carrying out investigations to develop their plan without the scaffold of the graphic organizer.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-Latex Gloves
- Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Handle glass with care. Always wear gloves, a lab coat/apron, and safety goggles when handling glass materials.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

<https://d1yqpar94jqbqm.cloudfront.net/documents/TexasEducationAgencyTexasSafetyStandards.pdf>

Additional safety considerations for this investigation include:

- Handle glass with care. Always wear gloves, a lab coat/apron, and safety goggles when handling glass materials.
- Students should wear safety goggles and lab coats/aprons at all times when liquids are present in the work area.
- Students should wear safety goggles and lab coats/aprons at all times when particulates are present in the work area (sand, powder, etc.)
- Students should never handle broken glass. Inspect all glass materials prior to distribution.
- Fallen Beads/BBs/Marbles/Shot may present a trip/slip hazard. Instruct students to be careful to confine materials to the work area and tread with care when these materials are present.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

<https://d1yqpar94jqbqm.cloudfront.net/documents/TexasEducationAgencyTexasSafetyStandards.pdf>

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:

It is important to listen to the conversations of several groups when they are talking over what they read at the end of this activity. Listening to the conversations is an opportunity for formative assessment as students are processing the readings. You should take notes on what students understand and what they remain unclear on. The final activity of this stage provides an opportunity to reteach those concepts students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-latex Gloves
- Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Students should wear safety goggles and lab coats/aprons at all times when liquids are present in the work area.
- Students should wear safety goggles and lab coats/aprons at all times when particulates are present in the work area (sand, powder, etc.)

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so

Updated Text: Added the following paragraphs to the end of the Teaching Tip for In-Person Lessons:

For more specific guidance on how to work with students at different levels of English language proficiency, as defined by the ELPS, we suggest consulting the section on supporting emerging multilingual students in the Teacher Implementation Guide.

For those groups who may respond well to a more challenging learning experience, you can use one of the additional Plan stage graphic organizers included as an appendix in the Teacher Implementation Guide. These additional Plan stage graphic organizers ask students to think about a bit more information during their investigation. For example, one of the graphic organizers asks students to make an explicit hypothesis prior to beginning the investigation. Another way to challenge students is to not provide a graphic organizer for the plan stage at all. This approach requires students draw on prior experiences in planning and carrying out investigations to develop their plan without the scaffold of the graphic organizer.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Goggles
- Lab Coat/Apron

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Additional safety considerations for this investigation include:

- Students should wear safety goggles and lab coats/aprons at all times when liquids are present in the work area.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

<https://d1yqpar94jqbqm.cloudfront.net/documents/TexasEducationAgencyTexasSafetyStandards.pdf>

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:  
It is important to listen to the conversations of several groups when they are talking over what they read at the end of this activity. Listening to the conversations is an opportunity for formative assessment as students are processing the readings. You should take notes on what students understand and what they remain unclear on. The final activity of this stage provides an opportunity to reteach those concepts students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

Updated Text: Teaching Tip for In-Person Lessons

We suggest creating a wonder wall where you can write down things students wonder about in response to the phenomenon. A wonder wall ensures that all students questions about the phenomenon are acknowledged as valid and their contributions to class discourse are valued. The wonder wall also provides resources for extension activities for students in the Do and Share stage.

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Glass: Inspect glass materials for damage before storing. Dispose of any broken glass materials. Follow your school's policy on disposing of broken glass.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Updated Text: Teaching Tip for In-Person Lessons

We suggest creating a wonder wall where you can write down things students wonder about in response to the phenomenon. A wonder wall ensures that all students questions about the phenomenon are acknowledged as valid and their contributions to class discourse are valued. The wonder wall also provides resources for extension activities for students in the Do and Share stage.

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:

It is important to listen to the conversations of several groups when they are talking over what they read at the end of this activity. Listening to the conversations is an opportunity for formative assessment as students are processing the readings. You should take notes on what students understand and what they remain unclear on. The final activity of this stage provides an opportunity to reteach those concepts students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

Updated Text: 7. For those groups who may respond to a more challenging learning experience, you can use the advanced Peer Review Guide included as an appendix. This additional Peer Review Guide increases the rigor of what counts as quality in science by including additional topics for consideration. For example, students are asked to provide feedback regarding the use of symbols are part of an argument. When using the advanced Peer Review Guide, make sure that both the author of the report and the students reviewing the report are ready for the additional challenge.

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Batteries: During clean-up, remove batteries from circuits/devices to mitigate risk of corrosion/acid leak. Store batteries securely.
- Glass: Inspect glass materials for damage before storing. Dispose of any broken glass materials. Follow your school's policy on disposing of broken glass.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

For more specific guidance on how to work with students at different levels of English language proficiency, as defined by the ELPS, we suggest consulting the section on supporting emerging multilingual students in the Teacher Implementation Guide.

For those groups who may respond well to a more challenging learning experience, you can use one of the additional Plan stage graphic organizers included as an appendix in the Teacher Implementation Guide. These additional Plan stage graphic organizers ask students to think about a bit more information during their investigation. For example, one of the graphic organizers asks students to make an explicit hypothesis prior to beginning the investigation. Another way to challenge students is to not provide a graphic organizer for the plan stage at all. This approach requires students draw on prior experiences in planning and carrying out investigations to develop their plan without the scaffold of the graphic organizer.

Moving between groups also provides an important opportunity for formative assessment.. You should take notes on what students understand and what they remain unclear on. The next stage (Share) provides an opportunity for reteaching those topics students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Original Text: New Content

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-Latex Gloves
- Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Handle glass with care. Always wear gloves, a lab coat/apron, and safety goggles when handling glass materials.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

<https://d1yqpar94jqbqm.cloudfront.net/documents/TexasEducationAgencyTexasSafetyStandards.pdf>

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Handle glass with care. Always wear gloves, a lab coat/apron, and safety goggles when handling glass materials.
- Students should wear safety goggles and lab coats/aprons at all times when liquids are present in the work area.
- Students should wear safety goggles and lab coats/aprons at all times when particulates are present in the work area (sand, powder, etc.)
- Students should never handle broken glass. Inspect all glass materials prior to distribution.
- Fallen Beads/BBs/Marbles/Shot may present a trip/slip hazard. Instruct students to be careful to confine materials to the work area and tread with care when these materials are present.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

Updated Text: Teaching Tip for In-Person Lessons

We suggest creating a wonder wall where you can write down things students wonder about in response to the phenomenon. A wonder wall ensures that all students questions about the phenomenon are acknowledged as valid and their contributions to class discourse are valued. The wonder wall also provides resources for extension activities for students in the Do and Share stage.

Plan stage graphic organizers included as an appendix in the Teacher Implementation Guide. These additional Plan stage graphic organizers ask students to think about a bit more information during their investigation. For example, one of the graphic organizers asks students to make an explicit hypothesis prior to beginning the investigation. Another way to challenge students is to not provide a graphic organizer for the plan stage at all. This approach requires students draw on prior experiences in planning and carrying out investigations to develop their plan without the scaffold of the graphic organizer.

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:

It is important to listen to the conversations of several groups when they are talking over what they read at the end of this activity. Listening to the conversations is an opportunity for formative assessment as students are processing the readings. You should take notes on what students understand and what they remain unclear on. The final activity of this stage provides an opportunity to reteach those concepts students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

For those groups who may respond well to a more challenging learning experience, you can use one of the additional Plan stage graphic organizers included as an appendix in the Teacher Implementation Guide. These additional Plan stage graphic organizers ask students to think about a bit more information during their investigation. For example, one of the graphic organizers asks students to make an explicit hypothesis prior to beginning the investigation. Another way to challenge students is to not provide a graphic organizer for the plan stage at all. This approach requires students draw on prior experiences in planning and carrying out investigations to develop their plan without the scaffold of the graphic organizer.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Rubber Gloves
- Goggles
- Lab Cat/Apron

Additional safety considerations for this investigation include:

- Handle glass with care. Always wear gloves, a lab coat/apron, and safety goggles when handling glass materials.
- Always wear rubber gloves when handling wires/batteries.
- Students should never handle broken glass. Inspect all glass materials prior to distribution.
- Inspect batteries for acid/corrosion prior to distribution. Battery acid is a harmful substance. Dispose of any batteries with visible acid/corrosion.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

Updated Text: Teaching Tip for In-Person Lessons

We suggest creating a wonder wall where you can write down things students wonder about in response to the phenomenon. A wonder wall ensures that all students questions about the phenomenon are acknowledged as valid and their contributions to class discourse are valued. The wonder wall also provides resources for extension activities for students in the Do and Share stage.

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Glass: Inspect glass materials for damage before storing. Dispose of any broken glass materials. Follow your school's policy on disposing of broken glass.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:

It is important to listen to the conversations of several groups when they are talking over what they read at the end of this activity. Listening to the conversations is an opportunity for formative assessment as students are processing the readings. You should take notes on what students understand and what they remain unclear on. The final activity of this stage provides an opportunity to reteach those concepts students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

Updated Text: Added the following paragraph to the end of the Teaching Tip for In-Person Lessons:

For those groups who may have finished early, you can use the questions posted to the wonder wall you created earlier in the investigation as an extension activity. We suggest having those groups pick a question from the wonder wall and use this time to collect data in order to answer that question as well. You should help the group choose a question that is appropriate for the amount of time remaining as well as the available equipment for data collection.

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

For those groups who may respond well to a more challenging learning experience, you can use one of the additional Plan stage graphic organizers included as an appendix in the Teacher Implementation Guide. These additional Plan stage graphic organizers ask students to think about a bit more information during their investigation. For example, one of the graphic organizers asks students to make an explicit hypothesis prior to beginning the investigation. Another way to challenge students is to not provide a graphic organizer for the plan stage at all. This approach requires students draw on prior experiences in planning and carrying out investigations to develop their plan without the scaffold of the graphic organizer.

Original Text: New Content

Updated Text: Added a new section on differentiation of instruction. The section begins on page 41 and ends on page 48, This content was added in response to feedback during the Texas Resource Review. The section on differentiation includes the following five subsections:

1. Meaningful, Rigorous, and Equitable by Design (p. 41-42)
2. Modification to instructional materials (p. 42-43)
3. Accommodation Embedded into the Instructional Materials (p. 43-44)
4. Additional Accommodations (p. 44-45)
5. Supporting Emerging Multilingual Students (p. 45-48)

The subsection on supporting emerging multilingual students provides information on accommodating students in each of the 4 domains of English Language Proficiency at each level of proficiency, as defined by the ELPS.

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Batteries: During clean-up, remove batteries from circuits/devices to mitigate risk of corrosion/acid leak. Store batteries securely.
- Glass: Inspect glass materials for damage before storing. Dispose of any broken glass materials. Follow your school's policy on disposing of broken glass.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Seeds or live plants should be stored according to supplier instructions. Seeds and live plants may be discarded normally.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:

It is important to listen to the conversations of several groups when they are talking over what they read at the end of this activity. Listening to the conversations is an opportunity for formative assessment as students are processing the readings. You should take notes on what students understand and what they remain unclear on. The final activity of this stage provides an opportunity to reteach those concepts students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

Updated Text: Added the following paragraphs to the end of the Teaching Tip for In-Person Lessons:

For more specific guidance on how to work with students at different levels of English language proficiency, as defined by the ELPS, we suggest consulting the section on supporting emerging multilingual students in the Teacher Implementation Guide.

For those groups who may respond well to a more challenging learning experience, you can use one of the additional Plan stage graphic organizers included as an appendix in the Teacher Implementation Guide. These additional Plan stage graphic organizers ask students to think about a bit more information during their investigation. For example, one of the graphic organizers asks students to make an explicit hypothesis prior to beginning the investigation. Another way to challenge students is to not provide a graphic organizer for the plan stage at all. This approach requires students draw on prior experiences in planning and carrying out investigations to develop their plan without the scaffold of the graphic organizer.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-Latex Gloves
- Lab Coat/Apron
- Goggles

Additional safety considerations for this investigation include:

- Students should wear safety goggles and lab coats/aprons at all times when liquids are present in the work area
- Students should always wear safety goggles and lab coats/aprons when particulates are present in the work area (sand, powder, etc.)
- Iodine is a hazardous substance that may cause burns when ingested, inhaled, or upon contact with eyes and skin.

Refer to the SDS link provided to familiarize yourself with proper first aid measures:

Updated Text: Teaching Tip for In-Person Lessons

We suggest creating a wonder wall where you can write down things students wonder about in response to the phenomenon. A wonder wall ensures that all students questions about the phenomenon are acknowledged as valid and their contributions to class discourse are valued. The wonder wall also provides resources for extension activities for students in the Do and Share stage.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Rubber Gloves

Additional safety considerations for this investigation include:

- Handle glass with care. Always wear gloves, a lab coat/apron, and safety goggles when handling glass materials.
- Always wear rubber gloves when handling wires/batteries.
- Students should never handle broken glass. Inspect all glass materials prior to distribution.
- Magnets may damage electronic devices, cell phones, and computers. Do not hold/place magnets near electronic devices.
- Magnets may present a pinch hazard. Instruct students not to place body parts between magnets.
- Inspect batteries for acid/corrosion prior to distribution. Battery acid is a harmful substance. Dispose of any batteries with visible acid/corrosion.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

<https://d1yqpar94jqbqm.cloudfront.net/documents/TexasEducationAgencyTexasSafetyStandards.pdf>

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Original Text: New Content

Updated Text: Added the following paragraph to the end of the Teaching Tip for In-Person Lessons:  
For students who have peer review feedback with few areas for improvement, we suggest using the more advanced peer review guide. This will provide more in-depth guidance for peer reviewers, leading to additional feedback for students on how to improve their scientific writing. This will also benefit the peer reviewers, by drawing attention to additional criteria on which to evaluate the quality of a written scientific argument.

Updated Text: Added a new section on classroom safety. The section begins on page 48 of the updated Teacher Implementation Guide and ends on page 51. This section was added in response to feedback during the Texas Resource Review. The section on classroom safety includes the following four subsections:

1. The Physical Environment
2. The Proper Use of Personal Protective Equipment
3. The Creation of Classroom Rules and Procedures
4. Cleaning Up after an Investigation or Design Challenge

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-latex Gloves
- Heat Insulated Gloves
- Safety Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Wear heat-insulated gloves, or use tongs if available, while handling hot substances. Turn off heat sources when not in use.
- Instructors should control and supervise the use of sharp tools (e.g. safety box cutters, snippers, scissors, wire cutters)
-

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-latex Gloves
- Safety Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Students should wear safety goggles and lab coats/aprons at all times when liquids are present in the work area.
- Students should wear safety goggles and lab coats/aprons at all times when particulates are present in the work area (sand, powder, etc.)

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so

For those groups who may respond well to a more challenging learning experience, you can use one of the additional Plan stage graphic organizers included as an appendix in the Teacher Implementation Guide. These additional Plan stage graphic organizers ask students to think about a bit more information during their investigation. For example, one of the graphic organizers asks students to make an explicit hypothesis prior to beginning the investigation. Another way to challenge students is to not provide a graphic organizer for the plan stage at all. This approach requires students draw on prior experiences in planning and carrying out investigations to develop their plan without the scaffold of the graphic organizer.

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Iodine is a hazardous material. Besides acute toxicity risks, it is also hazardous to aquatic environment. Store in well-ventilated place, keep container tightly closed. Store locked up. Do not dispose down drain. Store in sealed, labeled plastic container and contact local Waste Management for disposal instructions.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:

It is important to listen to the conversations of several groups when they are talking over what they read at the end of this activity. Listening to the conversations is an opportunity for formative assessment as students are processing the readings. You should take notes on what students understand and what they remain unclear on. The final activity of this stage provides an opportunity to reteach those concepts students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

Updated Text: Added the following paragraphs to the end of the Teaching Tip for In-Person Lessons:

For more specific guidance on how to work with students at different levels of English language proficiency, as defined by the ELPS, we suggest consulting the section on supporting emerging multilingual students in the Teacher Implementation Guide.

For those groups who may respond well to a more challenging learning experience, you can use one of the additional Plan stage graphic organizers included as an appendix in the Teacher Implementation Guide. These additional Plan stage graphic organizers ask students to think about a bit more information during their investigation. For example, one of the graphic organizers asks students to make an explicit hypothesis prior to beginning the investigation. Another way to challenge students is to not provide a graphic organizer for the plan stage at all. This approach requires students draw on prior experiences in planning and carrying out investigations to develop their plan without the scaffold of the graphic organizer.

Original Text: New Content

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Batteries: During clean-up, remove batteries from circuits/devices to mitigate risk of corrosion/acid leak. Store batteries securely.
- Glass: Inspect glass materials for damage before storing. Dispose of any broken glass materials. Follow your school's policy on disposing of broken glass.
- Magnets: Magnets may damage electronic devices, cell phones, and computers. Do not place/store magnets near electronic devices.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Updated Text: Added the following paragraphs to the end of the Teaching Tip for In-Person Lessons:

For more specific guidance on how to work with students at different levels of English language proficiency, as defined by the ELPS, we suggest consulting the section on supporting emerging multilingual students in the Teacher Implementation Guide.

For those groups who may respond well to a more challenging learning experience, you can use one of the additional Plan stage graphic organizers included as an appendix in the Teacher Implementation Guide. These additional Plan stage graphic organizers ask students to think about a bit more information during their investigation. For example, one of the graphic organizers asks students to make an explicit hypothesis prior to beginning the investigation. Another way to challenge students is to not provide a graphic organizer for the plan stage at all. This approach requires students draw on prior experiences in planning and carrying out investigations to develop their plan without the scaffold of the graphic organizer.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-latex Gloves
- Safety Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Students should wear safety goggles and lab coats/aprons at all times when liquids are present in the work area.
- Students should wear safety goggles and lab coats/aprons at all times when particulates are present in the work area (sand, powder, etc.)

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:

It is important to listen to the conversations of several groups when they are talking over what they read at the end of this activity. Listening to the conversations is an opportunity for formative assessment as students are processing the readings. You should take notes on what students understand and what they remain unclear on. The final activity of this stage provides an opportunity to reteach those concepts students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-latex Gloves
- Lab Coat/Apron
- Safety Goggles

Additional safety considerations for this investigation include:

- Handle glass with care. Always wear gloves, a lab coat/apron, and safety goggles when handling glass materials.
- Fallen materials may present a trip/slip hazard. Instruct students to be careful to confine materials to the work area and tread with care when these materials are present, and to clean up any materials that fall on the ground immediately.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

For more specific guidance on how to work with students at different levels of English language proficiency, as defined by the ELPS, we suggest consulting the section on supporting emerging multilingual students in the Teacher Implementation Guide.

For those groups who may respond well to a more challenging learning experience, you can use one of the additional Plan stage graphic organizers included as an appendix in the Teacher Implementation Guide. These additional Plan stage graphic organizers ask students to think about a bit more information during their investigation. For example, one of the graphic organizers asks students to make an explicit hypothesis prior to beginning the investigation. Another way to challenge students is to not provide a graphic organizer for the plan stage at all. This approach requires students draw on prior experiences in planning and carrying out investigations to develop their plan without the scaffold of the graphic organizer.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Rubber Gloves

Additional safety considerations for this investigation include:

- Handle glass with care. Always wear gloves, a lab coat/apron, and safety goggles when handling glass materials.
- Always wear rubber gloves when handling wires/batteries.
- Students should never handle broken glass. Inspect all glass materials prior to distribution.
- Magnets may damage electronic devices, cell phones, and computers. Do not hold/place magnets near electronic devices.
- Magnets may present a pinch hazard. Instruct students not to place body parts between magnets.
- Inspect batteries for acid/corrosion prior to distribution. Battery acid is a harmful substance. Dispose of any batteries with visible acid/corrosion.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

For more specific guidance on how to work with students at different levels of English language proficiency, as defined by the ELPS, we suggest consulting the section on supporting emerging multilingual students in the Teacher Implementation Guide.

For those groups who may respond well to a more challenging learning experience, you can use one of the additional Plan stage graphic organizers included as an appendix in the Teacher Implementation Guide. These additional Plan stage graphic organizers ask students to think about a bit more information during their investigation. For example, one of the graphic organizers asks students to make an explicit hypothesis prior to beginning the investigation. Another way to challenge students is to not provide a graphic organizer for the plan stage at all. This approach requires students draw on prior experiences in planning and carrying out investigations to develop their plan without the scaffold of the graphic organizer.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-latex Gloves
- Heat Insulated Gloves
- Safety Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Wear heat-insulated gloves, or use tongs if available, while handling hot substances. Turn off heat sources when not in use.
- Instructors should control and supervise the use of sharp tools (e.g. safety box cutters, snippers, scissors, wire cutters)
- 

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

<https://d1yqpar94jqbqm.cloudfront.net/documents/TexasEducationAgencyTexasSafetyStandards.pdf>

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:

It is important to listen to the conversations of several groups when they are talking over what they read at the end of this activity. Listening to the conversations is an opportunity for formative assessment as students are processing the readings. You should take notes on what students understand and what they remain unclear on. The final activity of this stage provides an opportunity to reteach those concepts students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:

It is important to listen to the conversations of several groups when they are talking over what they read at the end of this activity. Listening to the conversations is an opportunity for formative assessment as students are processing the readings. You should take notes on what students understand and what they remain unclear on. The final activity of this stage provides an opportunity to reteach those concepts students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Batteries: During clean-up, remove batteries from circuits/devices to mitigate risk of corrosion/acid leak. Store batteries securely.
- Glass: Inspect glass materials for damage before storing. Dispose of any broken glass materials. Follow your school's policy on disposing of broken glass.
- Magnets: Magnets may damage electronic devices, cell phones, and computers. Do not place/store magnets near electronic devices.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Link to Updated Content:

[View Updated Content](#)

Original Text: New Content

Updated Text: It is important to administer the Mid-Unit Educative Assessments and end of unit Summative Assessments in a fair and consistent manner. To ensure teachers do so, we have embedded teacher notes into the Learning Hub on how to administer each assessment. Following these teacher notes will ensure that each assessment is administered in the same way to all students. In the next section, we also provide details on how to assign Q&A assessments, Mid-Unit Educative Assessments, and end of unit Summative Assessments.

When assigning any assessments, teachers must be mindful of any required accommodations for students with different needs. The assessment system can be configured to provide additional time or other supports for students that are entitled to such accommodations. Upon assigning an assessment to a class, the teacher can then change the due date for students in accordance with any time requirements. The immersive reader is also embedded into the assessments, so students can utilize the language functions if needed.

In general, we suggest that when administering assessments, teachers should always defer to any district or school rules. Teachers must follow any required accommodations for an individual student.

Original Text: New Content

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-latex Gloves
- Safety Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Students should wear safety goggles and lab coats/aprons at all times when liquids are present in the work area

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

<https://d1yqpar94jqbqm.cloudfront.net/documents/TexasEducationAgencyTexasSafetyStandards.pdf>

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:

It is important to listen to the conversations of several groups when they are talking over what they read at the end of this activity. Listening to the conversations is an opportunity for formative assessment as students are processing the readings. You should take notes on what students understand and what they remain unclear on. The final activity of this stage provides an opportunity to reteach those concepts students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-latex Gloves
- Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Handle glass with care. Always wear gloves, a lab coat/apron, and safety goggles when handling glass materials.
- Students should never handle broken glass. Inspect all glass materials prior to distribution.
- Use only GFCI-protected circuits when using electrical equipment, and keep the equipment away from water sources to prevent shock.
- Be careful when handling the heat lamp and bulb. The bulb can shatter if dropped and can cut skin; if the bulb breaks, clean up the pieces immediately and place in a broken glass box. Do not touch the bulb when it is on or for several minutes after turning it off, because lightbulbs can get very hot and burn skin.
- Wash their hands with soap and water when done collecting the data.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

- Heat-Insulated Gloves
- Non-latex gloves (do not use while handling hot glue gun, not sufficient PPE for heated substances and may melt/trap hot substances)
- Safety Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Handle liquids with care. Always wear gloves, a lab coat/apron, and safety goggles when handling liquids.
- Handle glass with care. Always wear gloves, a lab coat/apron, and safety goggles when handling glass materials.
- Students should never handle broken glass. Inspect all glass materials prior to distribution.
- Handle hot glue gun with care.
- Wear heat-insulated gloves when handling hot glue or hot water.
- Inspect batteries for acid/corrosion prior to distribution. Battery acid is a harmful substance. Dispose of any batteries with visible acid/corrosion.
- Instructors should control and supervise the use of sharp tools (e.g. safety box cutters, snippers, scissors, wire cutters)

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

<https://d1yqpar94jqbqm.cloudfront.net/documents/TexasEducationAgencyTexasSafetyStandards.pdf>

Updated Text: 6. Activities such as (a) introducing a phenomenon, (b) making the guiding question of the investigation explicit, and (c) eliciting students' current ideas about why or how the phenomenon occurs are designed to help students comprehend more of what they read during later stages of the investigation. These activities also encourage students to be active readers who engage with a text on a deeper level because they create a need for student to read to learn and provides them with a framework for making sense of the information found in the text.

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:

It is important to listen to the conversations of several groups when they are talking over what they read at the end of this activity. Listening to the conversations is an opportunity for formative assessment as students are processing the readings. You should take notes on what students understand and what they remain unclear on. The final activity of this stage provides an opportunity to reteach those concepts students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

For those groups who may respond well to a more challenging learning experience, you can use one of the additional Plan stage graphic organizers included as an appendix in the Teacher Implementation Guide. These additional Plan stage graphic organizers ask students to think about a bit more information during their investigation. For example, one of the graphic organizers asks students to make an explicit hypothesis prior to beginning the investigation. Another way to challenge students is to not provide a graphic organizer for the plan stage at all. This approach requires students draw on prior experiences in planning and carrying out investigations to develop their plan without the scaffold of the graphic organizer.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Heat-Insulated Gloves
- Safety Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Wear heat-insulated gloves, or use tongs if available, while handling hot substances. Turn off heat sources when

not in use.

- Instructors should control and supervise the use of sharp tools (e.g. safety box cutters, snippers, scissors, wire cutters)

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-latex Gloves
- Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Handle glass with care. Always wear gloves, a lab coat/apron, and safety goggles when handling glass materials.
- Students should wear safety goggles and lab coats/aprons at all times when liquids are present in the work area.
- Students should wear safety goggles and lab coats/aprons at all times when particulates are present in the work area (sand, powder, etc.)
- Students should never handle broken glass. Inspect all glass materials prior to distribution.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

Updated Text: Teaching Tip for In-Person Lessons

We suggest creating a wonder wall where you can write down things students wonder about in response to the phenomenon. A wonder wall ensures that all students questions about the phenomenon are acknowledged as valid and their contributions to class discourse are valued. The wonder wall also provides resources for extension activities for students in the Do and Share stage.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-latex Gloves
- Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Handle glass with care. Always wear gloves, a lab coat/apron, and safety goggles when handling glass materials.
- Students should never handle broken glass. Inspect all glass materials prior to distribution.
- Use only GFCI-protected circuits when using electrical equipment, and keep the equipment away from water sources to prevent shock.
- Be careful when handling the heat lamp and bulb. The bulb can shatter if dropped and can cut skin; if the bulb breaks, clean up the pieces immediately and place in a broken glass box. Do not touch the bulb when it is on or for several minutes after turning it off, because lightbulbs can get very hot and burn skin.
- Wash their hands with soap and water when done collecting the data.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:

It is important to listen to the conversations of several groups when they are talking over what they read at the end of this activity. Listening to the conversations is an opportunity for formative assessment as students are processing the readings. You should take notes on what students understand and what they remain unclear on. The final activity of this stage provides an opportunity to reteach those concepts students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Hot glue guns should be disconnected from power source and allowed to cool before storage.
- Batteries: During clean-up, remove batteries from circuits/devices to mitigate risk of corrosion/acid leak. Store batteries securely.

Proclamation 2024: Report of New Content (08/25/2023)

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

- Glass: Inspect glass materials for damage before storing. Dispose of any broken glass materials. Follow your school's policy on disposing of broken glass.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Safety Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Students should wear safety goggles and lab coats/aprons at all times when liquids are present in the work area.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

<https://d1yqpar94jqbqm.cloudfront.net/documents/TexasEducationAgencyTexasSafetyStandards.pdf>

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Original Text: New Content

Updated Text: Added the following paragraphs to the end of the Teaching Tip for In-Person Lessons:  
For more specific guidance on how to work with students at different levels of English language proficiency, as defined by the ELPS, we suggest consulting the section on supporting emerging multilingual students in the Teacher Implementation Guide.

For those groups who may respond well to a more challenging learning experience, you can use one of the additional Plan stage graphic organizers included as an appendix in the Teacher Implementation Guide. These additional Plan stage graphic organizers ask students to think about a bit more information during their investigation. For example, one of the graphic organizers asks students to make an explicit hypothesis prior to beginning the investigation. Another way to challenge students is to not provide a graphic organizer for the plan stage at all. This approach requires students draw on prior experiences in planning and carrying out investigations to develop their plan without the scaffold of the graphic organizer.

Updated Text: Teaching Tip for In-Person Lessons

We suggest creating a wonder wall where you can write down things students wonder about in response to the phenomenon. A wonder wall ensures that all students questions about the phenomenon are acknowledged as valid and their contributions to class discourse are valued. The wonder wall also provides resources for extension activities for students in the Do and Share stage.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-latex Gloves
- Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Handle glass with care. Always wear gloves, a lab coat/apron, and safety goggles when handling glass materials.
- Students should wear safety goggles and lab coats/aprons at all times when liquids are present in the work area.
- Students should wear safety goggles and lab coats/aprons at all times when particulates are present in the work area (sand, powder, etc.)
- Students should never handle broken glass. Inspect all glass materials prior to distribution.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

<https://d1yqpar94jqbqm.cloudfront.net/documents/TexasEducationAgencyTexasSafetyStandards.pdf>

Updated Text: Added the following paragraphs to the end of the Teaching Tip for In-Person Lessons:

For more specific guidance on how to work with students at different levels of English language proficiency, as defined by the ELPS, we suggest consulting the section on supporting emerging multilingual students in the Teacher Implementation Guide.

For those groups who may respond well to a more challenging learning experience, you can use one of the additional Plan stage graphic organizers included as an appendix in the Teacher Implementation Guide. These additional Plan stage graphic organizers ask students to think about a bit more information during their investigation. For example, one of the graphic organizers asks students to make an explicit hypothesis prior to beginning the investigation. Another way to challenge students is to not provide a graphic organizer for the plan stage at all. This approach requires students draw on

Updated Text: Added the following paragraph to the end of the Teaching Tip for In-Person Lessons:  
For students who have peer review feedback with few areas for improvement, we suggest using the more advanced peer review guide. This will provide more in-depth guidance for peer reviewers, leading to additional feedback for students on how to improve their scientific writing. This will also benefit the peer reviewers, by drawing attention to additional criteria on which to evaluate the quality of a written scientific argument.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Additional safety considerations for this investigation include:

- Small, fallen materials may present a trip/slip hazard. Instruct students to be careful to confine materials to the

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

work area and tread with care when these materials are present.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

<https://d1yqpar94jqbqm.cloudfront.net/documents/TexasEducationAgencyTexasSafetyStandards.pdf>

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:

It is important to listen to the conversations of several groups when they are talking over what they read at the end of this activity. Listening to the conversations is an opportunity for formative assessment as students are processing the readings. You should take notes on what students understand and what they remain unclear on. The final activity of this stage provides an opportunity to reteach those concepts students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-latex Gloves
- Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Handle glass with care. Always wear gloves, a lab coat/apron, and safety goggles when handling glass materials.
- Students should wear safety goggles and lab coats/aprons at all times when liquids are present in the work area.
- Students should wear safety goggles and lab coats/aprons at all times when particulates are present in the work area (sand, powder, etc.)
- Students should never handle broken glass. Inspect all glass materials prior to distribution.
- Wear eye protection at all times. If powder gets in eyes, rinse with plenty of water for several minutes

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Rubber Gloves
- Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Always wear rubber gloves when handling wires/batteries
- Handle glass with care. Always wear gloves, a lab coat/apron, and safety goggles when handling glass materials.
- Inspect batteries for acid/corrosion prior to distribution. Battery acid is a harmful substance. Dispose of any batteries with visible acid/corrosion.
- Students should never handle broken glass. Inspect all glass materials prior to distribution.
- Instructors should control and supervise the use of sharp tools (e.g. safety box cutters, snippers, scissors, wire cutters)

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

graphic organizers asks students to make an explicit hypothesis prior to beginning the investigation. Another way to challenge students is to not provide a graphic organizer for the plan stage at all. This approach requires students draw on prior experiences in planning and carrying out investigations to develop their plan without the scaffold of the graphic organizer.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Glass: Glassware should be rinsed thoroughly with water and dried prior to storage in a secure, enclosed place.
- Glass: Inspect glass materials for damage before storing. Dispose of any broken glass materials. Follow your school's policy on disposing of broken glass.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:

It is important to listen to the conversations of several groups when they are talking over what they read at the end of this activity. Listening to the conversations is an opportunity for formative assessment as students are processing the readings. You should take notes on what students understand and what they remain unclear on. The final activity of this stage provides an opportunity to reteach those concepts students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Updated Text: Added the following paragraphs to the end of the Teaching Tip for In-Person Lessons:

For more specific guidance on how to work with students at different levels of English language proficiency, as defined by the ELPS, we suggest consulting the section on supporting emerging multilingual students in the Teacher Implementation Guide.

For those groups who may respond well to a more challenging learning experience, you can use one of the additional Plan stage graphic organizers included as an appendix in the Teacher Implementation Guide. These additional Plan stage graphic organizers ask students to think about a bit more information during their investigation. For example, one of the graphic organizers asks students to make an explicit hypothesis prior to beginning the investigation. Another way to challenge students is to not provide a graphic organizer for the plan stage at all. This approach requires students draw on prior experiences in planning and carrying out investigations to develop their plan without the scaffold of the graphic organizer.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-latex Gloves
- Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Students should wear safety goggles and lab coats/aprons at all times when liquids are present in the work area.
- Ammonia is a hazardous substance, known to be hazardous when inhaled, ingested, or when making contact with skin or eyes. Store locked up.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

<https://d1yqpar94jqbqm.cloudfront.net/documents/TexasEducationAgencyTexasSafetyStandards.pdf>

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:

Moving between groups also provides an important opportunity for formative assessment.. You should take notes on what students understand and what they remain unclear on. The next stage (Share) provides an opportunity for reteaching those topics students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

Updated Text: Added the following paragraph to the end of the Teaching Tip for In-Person Lessons:

For students who have peer review feedback with few areas for improvement, we suggest using the more advanced peer review guide. This will provide more in-depth guidance for peer reviewers, leading to additional feedback for students on how to improve their scientific writing. This will also benefit the peer reviewers, by drawing attention to additional criteria on which to evaluate the quality of a written scientific argument.

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Glass: Glassware should be rinsed thoroughly with water and dried prior to storage in a secure, enclosed place.
- Glass: Inspect glass materials for damage before storing. Dispose of any broken glass materials. Follow your school's policy on disposing of broken glass.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-latex Gloves
- Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Handle glass with care. Always wear gloves, a lab coat/apron, and safety goggles when handling glass materials.
- Students should wear safety goggles and lab coats/aprons at all times when liquids are present in the work area.
- Students should wear safety goggles and lab coats/aprons at all times when particulates are present in the work area (sand, powder, etc.)
- Students should never handle broken glass. Inspect all glass materials prior to distribution.
- Wear eye protection at all times. If powder gets in eyes, rinse with plenty of water for several minutes

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

For those groups who may respond well to a more challenging learning experience, you can use one of the additional Plan stage graphic organizers included as an appendix in the Teacher Implementation Guide. These additional Plan stage graphic organizers ask students to think about a bit more information during their investigation. For example, one of the graphic organizers asks students to make an explicit hypothesis prior to beginning the investigation. Another way to challenge students is to not provide a graphic organizer for the plan stage at all. This approach requires students draw on prior experiences in planning and carrying out investigations to develop their plan without the scaffold of the graphic organizer.

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:

It is important to listen to the conversations of several groups when they are talking over what they read at the end of this activity. Listening to the conversations is an opportunity for formative assessment as students are processing the readings. You should take notes on what students understand and what they remain unclear on. The final activity of this stage provides an opportunity to reteach those concepts students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-latex Gloves
- Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Students should always wear safety goggles and lab coats/aprons when liquids are present in the work area.
- Although dyes/food coloring are not hazardous materials, they should still be handled with care. Dyes may stain clothing. In event of contact with eye, rinse eyes at eye wash station for 15 minutes. Reference the provided SDS link to familiarize yourself with appropriate first aid measures: [https://www.flinnsci.com/sds\\_843-vegetable-food-dyes/sds\\_843/](https://www.flinnsci.com/sds_843-vegetable-food-dyes/sds_843/)
- Vinegar and Salt are nonhazardous. In the event of contact with eyes, rinse with water at eyewash station for 15 minutes. Reference the provided SDS link to familiarize yourself with appropriate first aid measures: [https://www.flinnsci.com/sds\\_844-vinegar/sds\\_844/](https://www.flinnsci.com/sds_844-vinegar/sds_844/)

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

<https://d1yqpar94jqbqm.cloudfront.net/documents/TexasEducationAgencyTexasSafetyStandards.pdf>

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Please refer to the Ammonia SDS and your school's policies to determine the proper disposal procedure for the ammonia.
- Disinfect work areas where bacteria were in use
- Store Ammonia locked up

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Glass: Glassware should be rinsed thoroughly with water and dried prior to storage in a secure, enclosed place.
- Glass: Inspect glass materials for damage before storing. Dispose of any broken glass materials. Follow your school's policy on disposing of broken glass.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Rubber Gloves
- Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Always wear rubber gloves when handling wires/batteries
- Handle glass with care. Always wear gloves, a lab coat/apron, and safety goggles when handling glass materials.
- Inspect batteries for acid/corrosion prior to distribution. Battery acid is a harmful substance. Dispose of any batteries with visible acid/corrosion.
- Students should never handle broken glass. Inspect all glass materials prior to distribution.
- Instructors should control and supervise the use of sharp tools (e.g. safety box cutters, snippers, scissors, wire cutters)

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

<https://d1yqpar94jqbqm.cloudfront.net/documents/TexasEducationAgencyTexasSafetyStandards.pdf>

Original Text: New Content

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:  
It is important to listen to the conversations of several groups when they are talking over what they read at the end of this activity. Listening to the conversations is an opportunity for formative assessment as students are processing the readings. You should take notes on what students understand and what they remain unclear on. The final activity of this stage provides an opportunity to reteach those concepts students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Glass: Glassware should be rinsed thoroughly with water and dried prior to storage in a secure, enclosed place.
- Glass: Inspect glass materials for damage before storing. Dispose of any broken glass materials. Follow your school's policy on disposing of broken glass.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Be sure to clean your work area with care! Small materials may present slip/trip hazards.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-latex Gloves
- Goggles
- Lab Coat/Apron

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Additional safety considerations for this investigation include:

- Students should wear safety goggles and lab coats/aprons at all times when liquids are present in the work area.
- Ammonia is a hazardous substance, known to be hazardous when inhaled, ingested, or when making contact with skin or eyes. Store locked up.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

<https://d1yqpar94jqbqm.cloudfront.net/documents/TexasEducationAgencyTexasSafetyStandards.pdf>

Updated Text: Teaching Tip for In-Person Lessons

We suggest creating a wonder wall where you can write down things students wonder about in response to the phenomenon. A wonder wall ensures that all students questions about the phenomenon are acknowledged as valid and their contributions to class discourse are valued. The wonder wall also provides resources for extension activities for students in the Do and Share stage.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-latex Gloves
- Safety Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Handle glass with care. Always wear gloves, a lab coat/apron, and safety goggles when handling glass materials.
- Handle liquids with care. Always wear gloves, a lab coat/apron, and safety goggles when handling liquids.
- Students should wear safety goggles and lab coats/aprons at all times when particulates are present in the work area (sand, powder, etc.)

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Glass: Inspect glass materials for damage before storing. Dispose of any broken glass materials. Follow your school's policy on disposing of broken glass.
- Batteries: During clean-up, remove batteries from circuits/devices to mitigate risk of corrosion/acid leak. Store batteries securely.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-latex Gloves
- Safety Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Students should wear safety goggles and lab coats/aprons at all times when particulates are present in the work area (sand, powder, etc.)

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Updated Text: Added the following paragraph to the end of the Teaching Tip for In-Person Lessons:

For those groups who may have finished early, you can use the questions posted to the wonder wall you created earlier in the investigation as an extension activity. We suggest having those groups pick a question from the wonder wall and use this time to collect data in order to answer that question as well. You should help the group choose a question that is appropriate for the amount of time remaining as well as the available equipment for data collection.

Updated Text: Added the following paragraphs to the end of the Teaching Tip for In-Person Lessons:

For more specific guidance on how to work with students at different levels of English language proficiency, as defined by the ELPS, we suggest consulting the section on supporting emerging multilingual students in the Teacher Implementation Guide.

For those groups who may respond well to a more challenging learning experience, you can use one of the additional Plan stage graphic organizers included as an appendix in the Teacher Implementation Guide. These additional Plan stage graphic organizers ask students to think about a bit more information during their investigation. For example, one of the graphic organizers asks students to make an explicit hypothesis prior to beginning the investigation. Another way to challenge students is to not provide a graphic organizer for the plan stage at all. This approach requires students draw on prior experiences in planning and carrying out investigations to develop their plan without the scaffold of the graphic organizer.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-latex Gloves
- Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Students should always wear safety goggles and lab coats/aprons when liquids are present in the work area.
- Although dyes/food coloring are not hazardous materials, they should still be handled with care. Dyes may stain clothing. In event of contact with eye, rinse eyes at eye wash station for 15 minutes. Reference the provided SDS link to familiarize yourself with appropriate first aid measures: [https://www.flinnsci.com/sds\\_843-vegetable-food-dyes/sds\\_843/](https://www.flinnsci.com/sds_843-vegetable-food-dyes/sds_843/)
- Vinegar and Salt are nonhazardous. In the event of contact with eyes, rinse with water at eyewash station for 15 minutes. Reference the provided SDS link to familiarize yourself with appropriate first aid measures: [https://www.flinnsci.com/sds\\_844-vinegar/sds\\_844/](https://www.flinnsci.com/sds_844-vinegar/sds_844/)

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Account for all supplies before returning to the classroom.
- Upon returning to the classroom, all students should wash their hands thoroughly with soap and water.
- Return all supplies to their designated storage spaces.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Original Text: New Content

Updated Text: Added a new section on differentiation of instruction. The section begins on page 41 and ends on page 48, This content was added in response to feedback during the Texas Resource Review. The section on differentiation includes the following five subsections:

1. Meaningful, Rigorous, and Equitable by Design (p. 41-42)
2. Modification to instructional materials (p. 42-43)
3. Accommodation Embedded into the Instructional Materials (p. 43-44)
4. Additional Accommodations (p. 44-45)
5. Supporting Emerging Multilingual Students (p. 45-48)

The subsection on supporting emerging multilingual students provides information on accommodating students in each of the 4 domains of English Language Proficiency at each level of proficiency, as defined by the ELPS.

Updated Text: Added the following paragraphs to the end of the Teaching Tip for In-Person Lessons:

For more specific guidance on how to work with students at different levels of English language proficiency, as defined by the ELPS, we suggest consulting the section on supporting emerging multilingual students in the Teacher Implementation Guide.

For those groups who may respond well to a more challenging learning experience, you can use one of the additional Plan stage graphic organizers included as an appendix in the Teacher Implementation Guide. These additional Plan stage graphic organizers ask students to think about a bit more information during their investigation. For example, one of the

graphic organizers asks students to make an explicit hypothesis prior to beginning the investigation. Another way to challenge students is to not provide a graphic organizer for the plan stage at all. This approach requires students draw on prior experiences in planning and carrying out investigations to develop their plan without the scaffold of the graphic organizer.

Updated Text: Added the following paragraph to the end of the Teaching Tip for In-Person Lessons:

For students who have peer review feedback with few areas for improvement, we suggest using the more advanced peer review guide. This will provide more in-depth guidance for peer reviewers, leading to additional feedback for students on how to improve their scientific writing. This will also benefit the peer reviewers, by drawing attention to additional criteria on which to evaluate the quality of a written scientific argument.

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Additional safety considerations for this investigation include:

- Students should never handle broken glass. Inspect all glass materials prior to distribution.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

<https://d1yqpar94jqbqm.cloudfront.net/documents/TexasEducationAgencyTexasSafetyStandards.pdf>

Updated Text: Teaching Tip for In-Person Lessons

We suggest creating a wonder wall where you can write down things students wonder about in response to the phenomenon. A wonder wall ensures that all students questions about the phenomenon are acknowledged as valid and their contributions to class discourse are valued. The wonder wall also provides resources for extension activities for students in the Do and Share stage.
