Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-latex Gloves
- Lab Coat/Apron

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

- Safety Goggles

Additional safety considerations for this investigation include:

- Students should never handle broken glass. Inspect all glass materials prior to distribution.
- Handle glass with care. Always wear gloves, a lab coat/apron, and safety goggles when handling glass materials.
- Handle lightbulb with caution, as it may get hot during use and may cause burns if handled improperly.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Students should wear safety goggles and lab coats/aprons at all times when liquids are present in the work area.
- Students should wear safety goggles and lab coats/aprons at all times when particulates are present in the work area (sand, powder, etc.)

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Updated Text: Added the following paragraph to the end of the Teaching Tip for In-Person Lessons:  
For students who have peer review feedback with few areas for improvement, we suggest using the more advanced peer review guide. This will provide more in-depth guidance for peer reviewers, leading to additional feedback for students on how to improve their scientific writing. This will also benefit the peer reviewers, by drawing attention to additional criteria on which to evaluate the quality of a written scientific argument.

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:

It is important to listen to the conversations of several groups when they are talking over what they read at the end of this activity. Listening to the conversations is an opportunity for formative assessment as students are processing the readings. You should take notes on what students understand and what they remain unclear on. The final activity of this stage provides an opportunity to reteach those concepts students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-latex Gloves
- Safety Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Handle glass with care. Always wear gloves, a lab coat/apron, and safety goggles when handling glass materials.
- Handle liquids with care. Always wear gloves, a lab coat/apron, and safety goggles when handling liquids.
- Students should wear safety goggles and lab coats/aprons at all times when particulates are present in the work area (sand, powder, etc.)

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Original Text: New Content

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Let your teacher know if any materials got broken during your investigation. Do not touch broken glass.
- Return your supplies to the supply area.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Original Text: New Content

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:

Moving between groups also provides an important opportunity for formative assessment.. You should take notes on what students understand and what they remain unclear on. The next stage (Share) provides an opportunity for reteaching those topics students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

Updated Text: Added the following paragraph to the end of the Teaching Tip for In-Person Lessons:  
For those groups who may have finished early, you can use the questions posted to the wonder wall you created earlier in the investigation as an extension activity. We suggest having those groups pick a question from the wonder wall and use this time to collect data in order to answer that question as well. You should help the group choose a question that is appropriate for the amount of time remaining as well as the available equipment for data collection.

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:

It is important to listen to the conversations of several groups when they are talking over what they read at the end of this activity. Listening to the conversations is an opportunity for formative assessment as students are processing the readings. You should take notes on what students understand and what they remain unclear on. The final activity of this stage provides an opportunity to reteach those concepts students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

this investigation, we also suggest

- Allow bulb time to cool before disconnecting.
- Glass: Inspect glass materials for damage before storing. Dispose of any broken glass materials. Follow your school's policy on disposing of broken glass.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-latex Gloves
- Lab Coat/Apron
- Safety Goggles

Additional safety considerations for this investigation include:

- Students should never handle broken glass. Inspect all glass materials prior to distribution.
- Handle glass with care. Always wear gloves, a lab coat/apron, and safety goggles when handling glass materials.
- Handle lightbulb with caution, as it may get hot during use and may cause burns if handled improperly.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

Additional safety considerations for this investigation include:

- Students should never handle broken glass. Inspect all glass materials prior to distribution.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

<https://d1yqpar94jqbqm.cloudfront.net/documents/TexasEducationAgencyTexasSafetyStandards.pdf>

Updated Text: Added the following paragraph to the end of the Teaching Tip for In-Person Lessons:

For those groups who may have finished early, you can use the questions posted to the wonder wall you created earlier in the investigation as an extension activity. We suggest having those groups pick a question from the wonder wall and use this time to collect data in order to answer that question as well. You should help the group choose a question that is appropriate for the amount of time remaining as well as the available equipment for data collection.

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:

Moving between groups also provides an important opportunity for formative assessment.. You should take notes on what students understand and what they remain unclear on. The next stage (Share) provides an opportunity for reteaching those topics students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

Updated Text: Added the following paragraph to the end of the Teaching Tip for In-Person Lessons:

For students who have peer review feedback with few areas for improvement, we suggest using the more advanced peer review guide. This will provide more in-depth guidance for peer reviewers, leading to additional feedback for students on how to improve their scientific writing. This will also benefit the peer reviewers, by drawing attention to additional criteria on which to evaluate the quality of a written scientific argument.

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:

It is important to listen to the conversations of several groups when they are talking over what they read at the end of this activity. Listening to the conversations is an opportunity for formative assessment as students are processing the readings. You should take notes on what students understand and what they remain unclear on. The final activity of this stage provides an opportunity to reteach those concepts students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-latex Gloves
- Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Students should wear safety goggles and lab coats/aprons at all times when liquids are present in the work area.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

For those groups who may respond well to a more challenging learning experience, you can use one of the additional Plan stage graphic organizers included as an appendix in the Teacher Implementation Guide. These additional Plan stage graphic organizers ask students to think about a bit more information during their investigation. For example, one of the graphic organizers asks students to make an explicit hypothesis prior to beginning the investigation. Another way to challenge students is to not provide a graphic organizer for the plan stage at all. This approach requires students draw on prior experiences in planning and carrying out investigations to develop their plan without the scaffold of the graphic organizer.

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Allow bulb time to cool before disconnecting.
- Glass: Inspect glass materials for damage before storing. Dispose of any broken glass materials. Follow your school's policy on disposing of broken glass.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Original Text: New Content

Updated Text: It is important to administer the Mid-Unit Educative Assessments and end of unit Summative Assessments in a fair and consistent manner. To ensure teachers do so, we have embedded teacher notes into the Learning Hub on how to administer each assessment. Following these teacher notes will ensure that each assessment is administered in the same way to all students. In the next section, we also provide details on how to assign Q&A assessments, Mid-Unit Educative Assessments, and end of unit Summative Assessments.

When assigning any assessments, teachers must be mindful of any required accommodations for students with different needs. The assessment system can be configured to provide additional time or other supports for students that are entitled to such accommodations. Upon assigning an assessment to a class, the teacher can then change the due date for students in accordance with any time requirements. The immersive reader is also embedded into the assessments, so students can utilize the language functions if needed.

In general, we suggest that when administering assessments, teachers should always defer to any district or school rules. Teachers must follow any required accommodations for an individual student.

the ELPS, we suggest consulting the section on supporting emerging multilingual students in the Teacher Implementation Guide.

For those groups who may respond well to a more challenging learning experience, you can use one of the additional Plan stage graphic organizers included as an appendix in the Teacher Implementation Guide. These additional Plan stage graphic organizers ask students to think about a bit more information during their investigation. For example, one of the graphic organizers asks students to make an explicit hypothesis prior to beginning the investigation. Another way to challenge students is to not provide a graphic organizer for the plan stage at all. This approach requires students draw on prior experiences in planning and carrying out investigations to develop their plan without the scaffold of the graphic organizer.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-latex Gloves
- Heat-Insulated Gloves
- Safety Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Wear heat-insulated gloves, or use tongs if available, while handling hot substances. Turn off heat sources when not in use.
- Students should wear safety goggles and lab coats/aprons at all times when liquids are present in the work area.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Let your teacher know if any materials got broken during your investigation. Do not touch broken glass.
- Return your supplies to the supply area.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Rubber Gloves
- Goggles

Additional safety considerations for this investigation include:

- Handle glass with care. Students should wear gloves and safety goggles at all times when handling glass materials.
- Students should never handle broken glass. Inspect all glass materials prior to distribution.
- Students should wear rubber gloves at all times when handling wires/batteries
- Inspect batteries for acid/corrosion prior to distribution. Battery acid is a harmful substance. Dispose of any batteries with visible acid/corrosion.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

<https://d1yqpar94jqbqm.cloudfront.net/documents/TexasEducationAgencyTexasSafetyStandards.pdf>

Updated Text: Added the following paragraph to the end of the Teaching Tip for In-Person Lessons:

For students who have peer review feedback with few areas for improvement, we suggest using the more advanced peer review guide. This will provide more in-depth guidance for peer reviewers, leading to additional feedback for students on how to improve their scientific writing. This will also benefit the peer reviewers, by drawing attention to additional criteria on which to evaluate the quality of a written scientific argument.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-latex Gloves
- Lab Coat/Apron
- Safety Goggles

Additional safety considerations for this investigation include:

- Handle glass with care. Always wear gloves, a lab coat/apron, and safety goggles when handling glass materials.
- Fallen materials may present a trip/slip hazard. Instruct students to be careful to confine materials to the work

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Dispose of any broken materials, do not store cracked/damaged materials
- Test tubes should be rinsed with water and allowed to dry prior to storing
- Remove batteries/unplug power cords from any electronic materials.
- Allow heat sources to cool prior to storing

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Original Text: New Content

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Rubber Gloves
- Safety Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Handle glass with care. Always wear gloves, a lab coat/apron, and safety goggles when handling glass materials.
- Always wear rubber gloves when handling wires/batteries
- Students should never handle broken glass. Inspect all glass materials prior to distribution.
- Instructors should control and supervise the use of sharp tools (e.g. safety box cutters, snippers, scissors, wire cutters)
- Inspect batteries for acid/corrosion prior to distribution. Battery acid is a harmful substance. Dispose of any batteries with visible acid/corrosion.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

<https://d1yqpar94jqbqm.cloudfront.net/documents/TexasEducationAgencyTexasSafetyStandards.pdf>

For more specific guidance on how to work with students at different levels of English language proficiency, as defined by the ELPS, we suggest consulting the section on supporting emerging multilingual students in the Teacher Implementation Guide.

For those groups who may respond well to a more challenging learning experience, you can use one of the additional Plan stage graphic organizers included as an appendix in the Teacher Implementation Guide. These additional Plan stage graphic organizers ask students to think about a bit more information during their investigation. For example, one of the graphic organizers asks students to make an explicit hypothesis prior to beginning the investigation. Another way to challenge students is to not provide a graphic organizer for the plan stage at all. This approach requires students draw on prior experiences in planning and carrying out investigations to develop their plan without the scaffold of the graphic organizer.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-latex Gloves
- Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Students should wear safety goggles and lab coats/aprons at all times when liquids are present in the work area.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

<https://d1yqpar94jqbqm.cloudfront.net/documents/TexasEducationAgencyTexasSafetyStandards.pdf>

It is important to listen to the conversations of several groups when they are talking over what they read at the end of this activity. Listening to the conversations is an opportunity for formative assessment as students are processing the readings. You should take notes on what students understand and what they remain unclear on. The final activity of this stage provides an opportunity to reteach those concepts students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-latex Gloves
- Heat-Insulated Gloves
- Safety Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Wear heat-insulated gloves, or use tongs if available, while handling hot substances. Turn off heat sources when not in use.
- Students should wear safety goggles and lab coats/aprons at all times when liquids are present in the work area.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Batteries: During clean-up, remove batteries from circuits/devices to mitigate risk of corrosion/acid leak. Store batteries securely.
- Glass: Glassware should be rinsed thoroughly with water and dried prior to storage in a secure, enclosed place.
- Glass: Inspect glass materials for damage before storing. Dispose of any broken glass materials. Follow your school's policy on disposing of broken glass.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Updated Text: Safety Considerations  
Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Rubber Gloves
- Goggles

Additional safety considerations for this investigation include:

- Handle glass with care. Students should wear gloves and safety goggles at all times when handling glass materials.
- Students should never handle broken glass. Inspect all glass materials prior to distribution.
- Students should wear rubber gloves at all times when handling wires/batteries
- Inspect batteries for acid/corrosion prior to distribution. Battery acid is a harmful substance. Dispose of any batteries with visible acid/corrosion.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:

It is important to listen to the conversations of several groups when they are talking over what they read at the end of this activity. Listening to the conversations is an opportunity for formative assessment as students are processing the readings. You should take notes on what students understand and what they remain unclear on. The final activity of this stage provides an opportunity to reteach those concepts students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

For those groups who may respond well to a more challenging learning experience, you can use one of the additional Plan stage graphic organizers included as an appendix in the Teacher Implementation Guide. These additional Plan stage graphic organizers ask students to think about a bit more information during their investigation. For example, one of the graphic organizers asks students to make an explicit hypothesis prior to beginning the investigation. Another way to challenge students is to not provide a graphic organizer for the plan stage at all. This approach requires students draw on prior experiences in planning and carrying out investigations to develop their plan without the scaffold of the graphic organizer.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-latex Gloves
- Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Students should wear safety goggles and lab coats/aprons at all times when liquids are present in the work area.
- Students should wear safety goggles and lab coats/aprons at all times when particulates are present in the work area (sand, powder, etc.)
- Fallen Beads/BBs/Marbles/Shot may present a trip/slip hazard. Instruct students to be careful to confine materials

# Proclamation 2024: Report of New Content

to the work area and tread with care when these materials are present.

- Oil is nonhazardous. In the event of contact with eyes, rinse with water at eyewash station for 15 minutes.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-latex Gloves
- Lab Coat/Apron
- Safety Goggles

Additional safety considerations for this investigation include:

- Handle glass with care. Always wear gloves, a lab coat/apron, and safety goggles when handling glass materials.
- Fallen materials may present a trip/slip hazard. Instruct students to be careful to confine materials to the work area and tread with care when these materials are present, and to clean up any materials that fall on the ground immediately.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Dispose of any broken materials, do not store cracked/damaged materials
- Test tubes should be rinsed with water and allowed to dry prior to storing
- Remove batteries/unplug power cords from any electronic materials.
- Allow heat sources to cool prior to storing

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Updated Text: Added the following paragraph to the end of the Teaching Tip for In-Person Lessons:  
For students who have peer review feedback with few areas for improvement, we suggest using the more advanced peer review guide. This will provide more in-depth guidance for peer reviewers, leading to additional feedback for students on how to improve their scientific writing. This will also benefit the peer reviewers, by drawing attention to additional criteria on which to evaluate the quality of a written scientific argument.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Rubber Gloves

Proclamation 2024: Report of New Content (08/25/2023)

Page 936 of 1830

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

- Safety Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Handle glass with care. Always wear gloves, a lab coat/apron, and safety goggles when handling glass materials.
- Always wear rubber gloves when handling wires/batteries
- Students should never handle broken glass. Inspect all glass materials prior to distribution.
- Instructors should control and supervise the use of sharp tools (e.g. safety box cutters, snippers, scissors, wire cutters)
- Inspect batteries for acid/corrosion prior to distribution. Battery acid is a harmful substance. Dispose of any batteries with visible acid/corrosion.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

<https://d1yqpar94jqbqm.cloudfront.net/documents/TexasEducationAgencyTexasSafetyStandards.pdf>

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:

It is important to listen to the conversations of several groups when they are talking over what they read at the end of this activity. Listening to the conversations is an opportunity for formative assessment as students are processing the readings. You should take notes on what students understand and what they remain unclear on. The final activity of this stage provides an opportunity to reteach those concepts students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Batteries: During clean-up, remove batteries from circuits/devices to mitigate risk of corrosion/acid leak. Store batteries securely.
- Glass: Inspect glass materials for damage before storing. Dispose of any broken glass materials.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

For those groups who may respond well to a more challenging learning experience, you can use one of the additional Plan stage graphic organizers included as an appendix in the Teacher Implementation Guide. These additional Plan stage graphic organizers ask students to think about a bit more information during their investigation. For example, one of the graphic organizers asks students to make an explicit hypothesis prior to beginning the investigation. Another way to challenge students is to not provide a graphic organizer for the plan stage at all. This approach requires students draw on prior experiences in planning and carrying out investigations to develop their plan without the scaffold of the graphic organizer.

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Original Text: New Content

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-latex Gloves
- Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Students should wear safety goggles and lab coats/aprons at all times when liquids are present in the work area.
- Students should wear safety goggles and lab coats/aprons at all times when particulates are present in the work area (sand, powder, etc.)
- Fallen Beads/BBs/Marbles/Shot may present a trip/slip hazard. Instruct students to be careful to confine materials to the work area and tread with care when these materials are present.
- Oil is nonhazardous. In the event of contact with eyes, rinse with water at eyewash station for 15 minutes.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

<https://d1yqpar94jqbqm.cloudfront.net/documents/TexasEducationAgencyTexasSafetyStandards.pdf>

It is important to listen to the conversations of several groups when they are talking over what they read at the end of this activity. Listening to the conversations is an opportunity for formative assessment as students are processing the readings. You should take notes on what students understand and what they remain unclear on. The final activity of this stage provides an opportunity to reteach those concepts students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

For more specific guidance on how to work with students at different levels of English language proficiency, as defined by the ELPS, we suggest consulting the section on supporting emerging multilingual students in the Teacher Implementation Guide.

For those groups who may respond well to a more challenging learning experience, you can use one of the additional Plan stage graphic organizers included as an appendix in the Teacher Implementation Guide. These additional Plan stage graphic organizers ask students to think about a bit more information during their investigation. For example, one of the graphic organizers asks students to make an explicit hypothesis prior to beginning the investigation. Another way to challenge students is to not provide a graphic organizer for the plan stage at all. This approach requires students draw on prior experiences in planning and carrying out investigations to develop their plan without the scaffold of the graphic organizer.

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Double-check the area surrounding the workstation to make sure that any materials that fell during the investigation are picked up.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Heat-Insulated Gloves
- Non-latex gloves (do not use while handling hot glue gun, not sufficient PPE for heated substances and may melt/trap hot substances)
- Safety Goggles
- Lab Coat/Apron

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Additional safety considerations for this investigation include:

- Handle liquids with care. Always wear gloves, a lab coat/apron, and safety goggles when handling liquids.
- Handle glass with care. Always wear gloves, a lab coat/apron, and safety goggles when handling glass materials.
- Students should never handle broken glass. Inspect all glass materials prior to distribution.
- Handle hot glue gun with care.
- Wear heat-insulated gloves when handling hot glue or hot water.
- Inspect batteries for acid/corrosion prior to distribution. Battery acid is a harmful substance. Dispose of any batteries with visible acid/corrosion.
- Instructors should control and supervise the use of sharp tools (e.g. safety box cutters, snippers, scissors, wire cutters)

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

<https://d1yqpar94jqbqm.cloudfront.net/documents/TexasEducationAgencyTexasSafetyStandards.pdf>

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Batteries: During clean-up, remove batteries from circuits/devices to mitigate risk of corrosion/acid leak. Store batteries securely.
- Glass: Glassware should be rinsed thoroughly with water and dried prior to storage in a secure, enclosed place.
- Glass: Inspect glass materials for damage before storing. Dispose of any broken glass materials. Follow your school's policy on disposing of broken glass.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Heat-Insulated Gloves
- Safety Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Wear heat-insulated gloves, or use tongs if available, while handling hot substances. Turn off heat sources when not in use.
- Instructors should control and supervise the use of sharp tools (e.g. safety box cutters, snippers, scissors, wire cutters)

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

Updated Text: Teaching Tip for In-Person Lessons

We suggest creating a wonder wall where you can write down things students wonder about in response to the phenomenon. A wonder wall ensures that all students questions about the phenomenon are acknowledged as valid and their contributions to class discourse are valued. The wonder wall also provides resources for extension activities for students in the Do and Share stage.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

Recommended safety materials for this investigation include:

- Non-latex Gloves
- Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Handle glass with care. Always wear gloves, a lab coat/apron, and safety goggles when handling glass materials.
- Students should wear safety goggles and lab coats/aprons at all times when liquids are present in the work area.
- Students should wear safety goggles and lab coats/aprons at all times when particulates are present in the work area (sand, powder, etc.)
- Students should never handle broken glass. Inspect all glass materials prior to distribution.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

<https://d1yqpar94jqbqm.cloudfront.net/documents/TexasEducationAgencyTexasSafetyStandards.pdf>

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:

It is important to listen to the conversations of several groups when they are talking over what they read at the end of this activity. Listening to the conversations is an opportunity for formative assessment as students are processing the readings. You should take notes on what students understand and what they remain unclear on. The final activity of this stage provides an opportunity to reteach those concepts students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

For those groups who may respond well to a more challenging learning experience, you can use one of the additional Plan stage graphic organizers included as an appendix in the Teacher Implementation Guide. These additional Plan stage graphic organizers ask students to think about a bit more information during their investigation. For example, one of the graphic organizers asks students to make an explicit hypothesis prior to beginning the investigation. Another way to challenge students is to not provide a graphic organizer for the plan stage at all. This approach requires students draw on prior experiences in planning and carrying out investigations to develop their plan without the scaffold of the graphic organizer.

Updated Text: Clean Up

Part of maintaining a safe and productive lab environment is proper clean-up of materials and disposal of consumables. The teacher implementation guide provides general instructions for establishing a general set of clean up procedures. For this investigation, we also suggest

- Hot glue guns should be disconnected from power source and allowed to cool before storage.
- Batteries: During clean-up, remove batteries from circuits/devices to mitigate risk of corrosion/acid leak. Store batteries securely.
- Glass: Inspect glass materials for damage before storing. Dispose of any broken glass materials. Follow your school's policy on disposing of broken glass.

These clean up procedures should be detailed for students before they begin working with the materials. We also recommend posting these procedures on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

Updated Text: The third activity of this stage is important because students' prior knowledge and experiences related to the phenomenon or problem should always be used as a starting point for student sense-making. The development of initial models on their own helps to make each individual student's ideas visible so teachers can learn more about each student's thinking. With this information the teacher can make modification to the lesson as needed and, most importantly, leverage the prior knowledge and experiences of the students in their classes as a useful tool for figuring why something happens in the world around them or to develop a solution to the problem. The generation of a list of "things we need to learn more about" also help student identify gaps in their understand and create a desire to learn.

Updated Text: Safety Considerations

Before students begin working with materials during this investigation, it is important to review the class safety rules. It is important to point to the ADI Safety Poster and review the general safety rules on this poster.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Recommended safety materials for this investigation include:

- Safety Goggles
- Lab Coat/Apron

Additional safety considerations for this investigation include:

- Students should wear safety goggles and lab coats/aprons at all times when liquids are present in the work area.

Make sure to go over these lesson specific safety rules after you review the general safety rules on the ADI Safety Poster. We also recommend posting these rules on your classroom chalkboard/whiteboard or projecting them onto the screen so students can refer to them while conducting this investigation.

We also recommend consulting the TEA approved safety standards for kindergarten through 12th grade. These standards can be found using the following link:

<https://d1yqpar94jqbqm.cloudfront.net/documents/TexasEducationAgencyTexasSafetyStandards.pdf>

Updated Text: Added the following paragraph to the end of the In-Person Lesson Plan:

It is important to listen to the conversations of several groups when they are talking over what they read at the end of this activity. Listening to the conversations is an opportunity for formative assessment as students are processing the readings. You should take notes on what students understand and what they remain unclear on. The final activity of this stage provides an opportunity to reteach those concepts students remain unclear about. Taking notes on student conversations will provide information on planning any reteaching that students require.

Updated Text: Added the following paragraph to the end of the Teaching Tip for In-Person Lessons:

For students who have peer review feedback with few areas for improvement, we suggest using the more advanced peer review guide. This will provide more in-depth guidance for peer reviewers, leading to additional feedback for students on how to improve their scientific writing. This will also benefit the peer reviewers, by drawing attention to additional criteria on which to evaluate the quality of a written scientific argument.

Updated Text: Added the following paragraphs to the end of the Teaching Tip for In-Person Lessons:

For more specific guidance on how to work with students at different levels of English language proficiency, as defined by the ELPS, we suggest consulting the section on supporting emerging multilingual students in the Teacher Implementation Guide.

For those groups who may respond well to a more challenging learning experience, you can use one of the additional Plan stage graphic organizers included as an appendix in the Teacher Implementation Guide. These additional Plan stage graphic organizers ask students to think about a bit more information during their investigation. For example, one of the graphic organizers asks students to make an explicit hypothesis prior to beginning the investigation. Another way to challenge students is to not provide a graphic organizer for the plan stage at all. This approach requires students draw on prior experiences in planning and carrying out investigations to develop their plan without the scaffold of the graphic organizer.

Updated Text: BIOZONE WORLD, our new digital science platform, brings our digital worktexts and rich collection of digital resources together in a single place. Utilize BIOZONE's digital worktexts, presentation slides, 3D models, and curated videos to deliver engaging and robust science programs. Educators can easily plan lessons, assign work, and grade student responses using BIOZONE WORLD. Students' access to BIOZONE WORLD allows them to use tools to markup, highlight, and bookmark content. They can also answer questions online, to form a record of work, and they can submit the work for grading. Students have access to the curated collection of digital resources (e.g. presentation slides, 3D models, and curated videos). Teacher access to the online version of the book has significant teacher-only additional features, including: Managing class student enrolments. The ability to view and give feedback on submitted student work, with grading as an option. Viewing model answers in place. Teachers can display suggested answers via Show/Hide buttons - ideal for introducing and reviewing activities via a shared screen. Students do not have access to model answers. COMING SOON: BIOZONE WORLD will soon have text translation into multiple languages (including Spanish). Find out more: [biozone.com/us/biozone-world](http://biozone.com/us/biozone-world)

Updated Text: Student Progress tracker (student version). The student version allows students to self-report their grades for each Learning Outcome, as part of the Texas Essential Knowledge and Skills (TEKS) for Biology. Students can track their progress as they move through each TEKS, identify patterns in their understanding, and then respond by working with more scaffolding, extension, or targeted revision.

Updated Text: Presentation Slides are a very popular way for teachers to deliver a lesson in a presentation style format. Presentation Slides are a useful delivery tool in both face to face or remote teaching. The Presentation Slides are a sizeable collection of slides specifically designed to support and enhance the content of the worktext. A set of slides will be available for each chapter of Biology for Texas. The Presentation Slides are fully ingested into BIOZONE WORLD and automatically appear with the selected activity.

Updated Text: Test Bank content and access to the question library are complementary with multi-year purchases. The Test Bank content is a set of curated questions designed to test student understanding of the material in the worktext. A wide range of questions types are used, and the questions can be ingested into test generator software such as Illuminate and ExamView, or can be reformatted into Quizlet or Kahoot quizzes. Questions can also be ingested into LMS in a number of formats, e.g. Google forms, or a Google or word document. The Test Bank content is provided in QTI and RTF formats, providing teachers with flexibility in how they deliver and use the questions. Questions are fully editable, teachers can pick and mix questions from the entire suite of questions and edit the wording to customize the tests for individual classrooms. Test Banks can be used to gauge student understanding at the end of activities, a set of related activities, or at the end of a chapter.

Updated Text: The Question Library provides all of the questions from the Student Edition worktext in a format that can be ingested into a range of LMS or other digital delivery tools. Questions within the worktext are generally scaffolded; easier questions are asked first, to build student confidence, and the questions may become more complex or difficult as students progress through an activity. The Question Library content is fully editable, providing teachers with flexibility and control in assigning questions within a differentiated classroom. The questions can be customized to match a student's learning ability or reading level.

Updated Text: Mapping Technology

The different types of maps available today are due to advancements in science and engineering. A two-dimensional coordinate system cannot convey much information about the vertical direction. This includes much of the information that interests Earth scientists and geologists, such as the elevation or shape of landforms or the depths of the ocean. Fortunately, recent advances in technology have greatly improved scientists' ability to collect different types of data that can be used to map Earth's geologic features in three dimensions. One such technology is the global positioning system (GPS). The work of mathematician Gladys B. West laid the groundwork for this network of satellites and receivers that collect various types of data used to make maps.

Updated Text: For example, rare earth metals (REMs) are critical to many of our technologies, including electric engines and computer chips. Most of the world's REMs are extracted and refined in China. The United States has a single REM mine and no processing plants. Therefore, all REMs used in the United States must be imported.

Dr. Bernard Hubbard is among those trying to identify possible sources in quantities large enough to be mined. He analyzes spectral images from satellite platforms to identify wavelengths unique to REMs and map their distribution. One of the nation's largest deposits of REMs is located within Round Top Mountain near Sierra Blanca, Texas. This deposit also contains other strategically important metals, including lithium, uranium, and thorium. Mining at Round Top is projected to begin in 2023. A Texas-based REM processing plant is also expected to open by 2025. In addition, existing Texas companies are increasing their efforts to recover and recycle REMs from electronic waste.

Current Page Number(s): 753

Location: paragraph 2, column 1

Original Text: New Content

Updated Text: A portion of the cloud collapsed, due to gravity, to form the sun. Here the pressure became so intense that hydrogen atoms fused together, producing energy as some of the hydrogen converted to helium. The remaining matter in the solar nebula formed a rotating, disk-shaped cloud of interstellar dust. This cloud eventually condensed, in a process known as accretion, in which particles are pulled together by gravity to form much larger objects. These separate masses eventually produced the planets.

Original Text: New Content

Updated Text: 25. Sample answer: Conservation of nonrenewable energy resources in Texas can be achieved with various technological, policy, and social solutions. Technological solutions include increasing energy-efficiency in mining, power plants, manufacturing, and transportation. Social solutions include lifestyle changes, such as choosing public transportation, walking or biking, setting the thermostat lower, and turning off the air conditioning. Government policies can help provide financial incentives that support technological advantages and infrastructure to encourage social solutions.

Original Text: New Content

Updated Text: 5. Model should show how seismic waves travel at different velocities in different types of rock, varying with the rigidity and density. For example, seismic waves pass through the upper mantle more rapidly than the shallower crust, indicating a change in rock type. Seismic waves slow down again when they enter the asthenosphere, indicating a more plastic and partially melted structure. As they move out of the asthenosphere seismic waves speed up again, indicating stronger and more rigid rock. Deeper still, seismic wave velocities increase again, indicating the presence of denser minerals. There are two types of waves, P waves and S waves. S waves are not transmitted through liquids, so the failure of S waves to pass through the outer core indicates that it is liquid.

6. Model should show the inner core is solid iron and nickel, and how Earth's magnetic field is thought to be generated in its outer core by rising and sinking currents of molten metal that are then deflected or spun by Earth's rotation. The mantle mineral composition changes forming rigid layers below and above the asthenosphere.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Original Text: New Content

Updated Text: Hydrocarbons are compounds of hydrogen and carbon atoms (Lesson 2.2). Crude oil, or petroleum, is a mixture of hydrocarbons and other compounds. It exists as a black, gooey liquid that can burn easily. Crude oil forms over millions of years from the decayed remains of ancient organisms, which become crushed beneath layers of rock and are subjected to intense pressure and heat. Consequently, oil is considered a type of fossil fuel. All fossil fuels are energy sinks, or reservoirs of energy.

Original Text: New Content

Updated Text: Greenhouse gases absorb and convert a portion of solar energy as infrared radiation (IR) that warms the lower atmosphere and surface of Earth. Increased greenhouse gases from human activity increase absorption and conversion of IR, which can increase global atmospheric temperatures. The ozone layer is mostly made up of O<sub>3</sub> which interacts with ultraviolet (UV) radiation from the sun to keep 95 percent of these harmful rays from reaching Earth's surface. Ozone depletion reduces this protective effect.

**Component: *Environmental Science | Texas Student Edition***

ISBN: 9798214069432

Current Page Number(s): 87

Location: Under the heading, "The Carbon Cycle", first paragraph, new last sentence

Original Text: New Content

Updated Text: Carbon is the basic building block of all organic compounds required for life. Carbon is found in every cell of your body. It is part of the carbohydrate molecules produced through photosynthesis and eaten or decomposed by consumers. In the carbon cycle (Figure 3-18), a key component is carbon dioxide (CO<sub>2</sub>) gas, which makes up only about 0.04 percent of the volume of the atmosphere and is also dissolved in water. The amount of CO<sub>2</sub> (and water vapor) has a big effect on global temperatures because of the greenhouse effect (Lesson 3.1). Carbon sinks include the atmosphere, ocean, rocks and sediments, and living organisms.

## **Component: *Environmental Science | Texas Student Edition***

ISBN: 9798214069432

Current Page Number(s): 58

Location: Under the heading, "Kinetic Energy", first paragraph, third sentence to the end of the paragraph and the second paragraph, first sentence

Original Text: New Content

Updated Text: Thermal energy is another form of kinetic energy. Thermal energy is the total kinetic energy of all the moving atoms, ions, or molecules in a sample of matter. When electrons move through a material, their kinetic energy increases the material's temperature. The faster the motion of the atoms, ions, or molecule that make up the object, the higher the temperature of the object becomes. Temperature is a measure of the thermal energy present in a sample of matter. Thermal energy is transferred as heat in three ways. Convection is energy that is carried by the movement of particles of a liquid or gas between warmer and cooler locations. Conduction transfers energy between molecules that collide in a liquid or that are connected in a solid. Finally, radiation is energy carried directly by electromagnetic waves, called electromagnetic radiation.

Current Page Number(s): 56

Location: Before What Did You Figure Out? section, insert new discourse icon, prompt, and questions and annos

Original Text: New Content

Updated Text: Have students turn and talk about the following questions with a small group.

- What uses of soil did you observe in the lesson? Sample student response: Tomato plants use soil to grow.
- What did you change when you grew the plants? Student responses will vary. Sample response: water and soil
- What are the three kinds of soil? Student responses will vary. Sample response: clay, loam, and sand
- Why did you need to test three different types of soil when growing a tomato plant? Student responses will vary.

Sample response: We had to see which soil was the best to grow the plant.

- How did you use a model in this lesson? Sample response: Student responses will vary. Sample response: I used a model to represent plants and plant growth.

Proclamation 2024: Report of New Content (08/25/2023)

Page 1025 of 1830

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Original Text: New Content

Updated Text: After identifying and describing safe practices, students can demonstrate these practices as they find shadows and use nonstandard measurement tools to measure shadows in the classroom or outside and explain how shadows are made.

Given criterion such as a nonstandard measurement length, students can find shadows in the classroom or outside and explain how they are made.

ISBN: 9781616291532

Current Page Number(s): 104

Location: Safety, bulleted list

Original Text: New Content

Updated Text: • Follow all lab safety guidelines.

- Only point the flashlight at the objects.
- Review the safety rules on the safety poster in your classroom.

**Component: *Science Techbook for Texas by Discovery Education: Grade K Unit 3 Teacher Edition***

ISBN: 9781616291563

Current Page Number(s): 29

Location: During Reading, replace paragraph text

Original Text: New Content

Updated Text: Read the text aloud as students follow along, stopping to discuss key ideas and details. You may also use the immersive reader to play the audio or read the text aloud to students. Encourage all students to listen carefully while looking at the pictures to make connections. Pause reading for 1–2 minutes when you reach an image of the nighttime sky.

ASK • What do you observe about the stars? Sample response: I observed that there are a lot of stars. I observed that some of them are big and some are small.

- What do you observe about the moon? Sample response: I observed that the moon is big.

Then, have students tell a partner two main ideas from the reading.

Notice objects that you can only see in the sky during the day. Students should notice the rainbow and clouds.

Monitor students during the exploration to ensure that they are on the right track.

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Current Page Number(s): 54

Location: Using the Interactive, paragraphs 1 and 2

Original Text: New Content

Updated Text:

Explain that the purpose of this interactive is to learn about the process of growing vegetables. Say to students, This interactive is a model. A model is used to represent objects or processes in the world around us. Models can also be used to design a solution to a problem. Ask student volunteers to share examples of models before they start the interactive. Guide them to share which object or process the models represent. Explain that the model they will use in this lesson represents a plant and the process of plant growth.

Students will use the interactive to combine variables to identify which variable combination produces the largest crop, using a chart to record their data. (You may want to review how to use the chart for data collection.)

To guide their thinking as they explore, have students think about the following questions before the interactive.

Current Page Number(s): 23

Location: During Reading, ASK questions, following last bullet

Original Text: New Content

Updated Text: • How could you change a soft rock? I can scratch or break a soft rock.

**Component: *Science Techbook for Texas by Discovery Education: Grade K Unit 4 Teacher Edition***

ISBN: 9781616291587

Current Page Number(s): 23

Location: ELPS chart

Original Text: New Content

Updated Text:

Beginning

Write the words/phrases water, air, sun, and room to grow on the board. Read and have students repeat them and take notes by drawing pictures. As they watch the video, have students raise their hands when they hear one of the words. Students should add details to their drawings from the video examples.

Intermediate

Write the words plant needs on the board. Have students draw a picture of a plant. As plant needs are discussed in the video, have students raise their hands, and then pause the video to discuss each need. Allow students to add to their plant drawings to represent each need. Write the needs of plants, and for students who are able, encourage them to label their drawings.

Advanced

Pause the video as each need is described. Ask one student to describe in their own words how that thing helps a plant grow. Ask another student to draw what their peer said. Repeat this to have students reciprocate with their partner. Replay sections of the video as needed.

Advanced High

Have students draw a healthy plant and an unhealthy plant. After watching the video, have students discuss with a partner what things can help or hurt a plant's growth and add details to their drawings that represent how the healthy plant is getting its needs met. Then, ask students to share with the class.

Current Page Number(s): 66

Location: Setting the Purpose, after the first paragraph add new text

Original Text: New Content

Updated Text:

Describe to students that windmills are built to capture the wind to create energy we use for everyday objects. Explain that when designing windmills, engineers must think about different designs of blades to capture the most amount of wind. When they design solutions, they use models to test out their ideas.

ASK

What kind of models could we make to test how we can capture air that moves? Sample response: We could make a pinwheel to show how air moves.

Tell students that they will be developing model windmills using pinwheels. Allow students the freedom to make the blades of the pinwheels different sizes and shapes to test out their ideas, with the goal of showing that the pinwheel moves the fastest when air from a fan is blowing on it.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

## Subject: Science, Grade 3

### Program: *Science Techbook for Texas by Discovery Education - Grade 3: TEKS*

**Component:** *Science Techbook for Texas by Discovery Education: Grade 3 Unit 3 Teacher Edition*

ISBN: 9781616292041

Current Page Number(s): 135

Location: Below the Turn and Talk question

Original Text: New Content

Updated Text: [add new question with ASK icon]

What safety rules did you follow during the investigation? Sample response: I had to be careful when running so that I did not run into anyone.

**Component:** *Science Techbook for Texas by Discovery Education: Grade 3 Unit 3 Teacher Edition*

ISBN: 9781616292041

Current Page Number(s): xiv

Location: Unit Standards> Earth's Resources

Original Text: New Content

Updated Text: 3.11.A, 3.11.B, 3.11.C, 3.1.C, 3.1.G, 3.3.A, 3.4.A, 3.5.D

**Component:** *Science Techbook for Texas by Discovery Education: Grade 3*

ISBN: 9781616291457

Proclamation 2024: Report of New Content (08/25/2023)

Page 1054 of 1830

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

**Component: *Science Techbook for Texas by Discovery Education: Grade 3 Unit 1 Teacher Edition***

ISBN: 9781616291921

Current Page Number(s): 55

Location: Record It! column, after existing items

Original Text: New Content

Updated Text: Students can use a graphic organizer such as a table or Venn diagram to show how matter can be compared based on its physical properties.

**Component: *Science Techbook for Texas by Discovery Education: Grade 3 Unit 3 Teacher Edition***

ISBN: 9781616292041

Current Page Number(s): 89

Location: Last paragraph under ASK questions

Original Text: New Content

Updated Text: On the board as a whole class activity, compile the weather data into line graphs. Complete this for Part 1 and Part 2. Have students provide you with directions on how to create the graph.

After students have collected their data, direct them to clean up their materials.

**Component: *Science Techbook for Texas by Discovery Education: Grade 3 Unit 4 Teacher Edition***

ISBN: 9781616292126

Current Page Number(s): 73

Location: Below blue shaded box with pencil, above Turn and Talk

Original Text: New Content

Updated Text: Point out to students that the interactive allows them to construct a bar graph to collect and organize their data. Show students how to access the graphing tool by clicking the first icon in the upper right corner of the interactive. Then, click "Graph." Encourage students to verbally explain to a partner what the bar graph shows. Students should explain that the graph shows how the combination of frog features affects the lifespan of frogs. They should note that the years of survival are shown on the y-axis and the combination of features is shown on the x-axis.

**Component: *Science Techbook for Texas by Discovery Education: Grade 3***

Original Text: New Content

Updated Text: • How large is the sun compared to Earth?  
• Is your model of the sun and Earth system proportional?  
• How do Earth and the moon stay in orbit around each other?  
• What shape is Earth's orbit around the sun?

## **Component: *Science Techbook for Texas by Discovery Education: Grade 3 Unit 4 Student Edition***

ISBN: 9781616292133

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Current Page Number(s): 130

Location: Part 1, Step 1

Original Text: New Content

Updated Text: Go outdoors with your teacher. Make sure to wear gloves when touching items outside.

**Component: *Science Techbook for Texas by Discovery Education: Grade 3 Unit 2 Teacher Edition***

ISBN: 9781616292010

Current Page Number(s): 70

Location: Part 3, following bulleted instruction items

Original Text: New Content

Updated Text: Select a student group's data to create into a bar graph. Have students provide you with directions on how to create the graph.

**Component: *Science Techbook for Texas by Discovery Education: Grade 3 Unit 2 Teacher Edition***

ISBN: 9781616292010

Current Page Number(s): 7

Location: ASK questions

Original Text: New Content

Updated Text: • How does the rubber band interact with the cardboard hopper? Responses will vary. Sample response: The rubber band caused the ends of the hopper to pull together, pushing it off the launch pad and into the air.

• What happened to the cardboard in terms of cause-and-effect? Responses will vary. Sample response: The rubber band caused a force to interact with the cardboard. The effect was the cardboard moved.

• Why was it important to wear safety goggles during this investigation? Sample response: We had to wear safety goggles in case the popper flew too close to our eyes.

**Component: *Science Techbook for Texas by Discovery Education: Grade 3 Unit 3 Teacher Edition***

ISBN: 9781616292041

Current Page Number(s): 157

Location: After the Video > replace Turn and Talk section

Original Text: New Content

Updated Text: Explain how a proportion can be used to describe objects and systems in science.

Say: A proportion is when the size or number of the parts stays the same compared to the whole. For example, if you take a picture and make it ten times bigger, the large picture is proportional to the small one because all the parts are the same compared to the whole. If you double a whole recipe for a party, the recipe is proportional because all the parts or ingredients are also doubled.

Have students turn and talk to a partner about the questions.

Proclamation 2024: Report of New Content (08/25/2023)

Page 1058 of 1830

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

ASK

How large is the sun compared to Earth? Sample response: The sun is a million times larger than Earth (based on the information in the video).

Is your model of the sun and Earth system proportional? Sample response: It is not proportional because the sun should be much larger than Earth.

How do Earth and the moon stay in orbit around each other? Sample response: Earth's gravitational pull and the moon's speed of motion.

What shape is Earth's orbit around the sun? Sample response: Earth's orbit is a circle or oval shape.

**Component: *Science Techbook for Texas by Discovery Education: Grade 3 Unit 4 Teacher Edition***

ISBN: 9781616292126

Current Page Number(s): 152

Location: Investigating Making Fossils, Part 1, Step 1

Original Text: New Content

Updated Text: Go outdoors with your teacher. Make sure to wear gloves when touching items outside.

**Component: *Science Techbook for Texas by Discovery Education: Grade 3 Unit 2 Student Edition***

ISBN: 9781616292027

Current Page Number(s): 47

Location: Safety

Original Text: New Content

Updated Text: • Follow all lab safety guidelines.

- Lift heavy objects such as books carefully.
- Wear closed-toe shoes to protect feet from falling objects.

**Component: *Science Techbook for Texas by Discovery Education: Grade 3 Unit 2 Teacher Edition***

ISBN: 9781616292010

Current Page Number(s): 58

Location: Turn and Talk

Original Text: New Content

Updated Text: • What is energy? Sample response: Energy is an ability to make changes.

- What are some everyday examples of energy? Sample response: thermal energy, sound energy, mechanical energy
- What are some examples of invisible energy? Sample response: Invisible energy is sound, electrical, and chemical energy.

**Component: *Science Techbook for Texas by Discovery Education: Grade 3***

ISBN: 9781616291457

Updated Text: Have students help you draw a tree map showing the different types of energy that can be changed into electrical energy based on the reading passage.

**Component: *Science Techbook for Texas by Discovery Education: Grade 3 Unit 3 Teacher Edition***

ISBN: 9781616292041

Current Page Number(s): 49

Location: Turn and Talk

Original Text: New Content

Updated Text: • Did you have enough materials to make the building? Is there a resource you wish there was more of? If so, what was the resource and why did you need more of it? Student responses will vary. Sample response: We could not build the roof properly because we ran out of craft paper. We wish we had more craft paper.

• Would it have been fair for any one of the groups to use most or all of one of the materials? How would you make dividing up resources more fair? Student responses will vary. Sample response: This would not be fair because other groups would not be able to use that material. It would be more fair if each group got the same amount of material

• Which of the building construction resources can be conserved through reducing, reusing, or recycling? Student response will vary. Sample response: The cardboard and paper can be recycled. The craft sticks and rocks can be reused. We could have used less paper clips.

• What safety rules did you follow during the investigation? Sample response: I had to be careful using the scissors so that I did not cut myself or someone else.

Original Text: New Content

Updated Text: 3.11.A Explore and explain how humans use natural resources such as in construction, in agriculture, in transportation, and to make products.

3.11.B Explain why the conservation of natural resources is important.

3.11.C Identify ways to conserve natural resources through reducing, reusing, or recycling.

Updated Text: • What are some tools used to gather weather data? Sample response: Thermometers, barometers, and weathervanes are some tools used for weather data.

• How can measurement tools help us describe weather? Sample response: A thermometer tells us how warm or cold weather is. A weathervane tells us the direction of the wind. A barometer tells us pressure, which can help predict future weather.

• How does being able to use tools to predict and measure the weather impact society? Using tools to predict and measure the weather allows us to know what to wear and which activities we can do. It can also help protect us if something dangerous like lightning or a hurricane is going to happen.

Original Text: New Content

Updated Text: Work with your teacher to create a class bar graph of the data from Part 2. What does the graph tell you about the relationship between force and distance traveled? Sample response: The more force applied, the further the car traveled.

**Component: *Science Techbook for Texas by Discovery Education: Grade 5 Unit 4 Teacher Edition***

ISBN: 9781616292331

Current Page Number(s): 19

Location: Turn and Talk, bulleted questions

Original Text: New Content

Updated Text: • How do other organisms interact with the biotic or abiotic factor you chose to remove from the ecosystem? Student responses will vary. Sample responses: Fish also eat worms. Worms eat the dead and decaying grass. Worms live in rotten logs from fallen trees.

- How would removing this factor impact the survival of other organisms in the ecosystem? Sample response: Without worms, there will be less available food sources for the organisms in the ecosystem. Worms are decomposers that help break down decaying matter, so without them, dead organisms would stay around longer. Worms also return nutrients to the soil that help the grass and trees survive and grow, and these plants are sources of food and shelter for other living things.
- How did you demonstrate the use of safety equipment during the field investigation? Sample response: Student responses will vary. Sample response: I wore gloves whenever I was touching water or rocks in the ecosystem.
- How did you stay safe during the investigation? Sample response: We did not put the materials in our mouths, and we followed the guidelines.
- Why is it important to use a hand lens to observe the ecosystem? Sample response: Using the hand lens helps you to observe without having to pick up anything in the ecosystem.

Updated Text: How did you stay safe during the investigation? Sample response: We did not put the materials in our mouths, and we followed the guidelines.

Why is it important to use a hand lens to observe the ecosystem? Sample response: Using the hand lens helps you to observe without having to pick up anything in the ecosystem.

## **Component: *Science Techbook for Texas by Discovery Education: Grade 5 Unit 3 Teacher Edition***

ISBN: 9781616292294

Current Page Number(s): 13

Location: Part 2, paragraph and ASK questions following the pencil box

Original Text: New Content

Updated Text: After students have completed their data table, explain that they will be constructing a line graph. Say, a line graph is a type of graph that shows change over time. In this investigation, you measured how the shadow's length and angle changed throughout the day. You will construct a line graph to show how the shadow's length changed hour by hour during the day.

Remind students that graphs have an x-axis and a y-axis. The x-axis is the horizontal axis, and the y-axis is the vertical axis. Students will need to select a scale to record time on the y-axis. Support students as needed to determine the appropriate scale.

ASK

- Which variable belongs on the x-axis? Sample response: Time
- Which variable belongs on the y-axis? Sample response: Shadow length

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Direct students to construct their line graphs on a piece of graph paper. Remind them to label their axes and add a graph title. Demonstrate to students how to find a point on their graph. Students should use their protractors to draw straight lines to connect their dots. Encourage students to share their graphs with small groups upon completion.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Original Text: New Content

Updated Text: Aside from size and complexity, certain cell structures are found only in eukaryotes' cells. These cell structures each have one or more specific functions. The complementary relationship between structure and function within cells can be analyzed and explained. For example, a eukaryotic cell has a true nucleus. This means its DNA is wrapped neatly in a structure called a membrane. The membrane functions to provide protection and a fixed environment. The cell parts in a eukaryotic cell are also bound in membranes that keep them organized throughout the cell. Animals, plants, and fungi are all eukaryotes. Most eukaryotes are multicellular. However, some eukaryotes such as protists can be unicellular. An amoeba is an example of a unicellular protist that is also a eukaryote. Like plants and animals, amoebas also have true nuclei and membrane-bound cell parts.

Location: Second paragraph on page

Original Text: New Content

Updated Text: All prokaryotic cells are unicellular. Prokaryotic cells are much smaller than eukaryotic cells and much simpler in structure. Similar to eukaryotic cells, the complementary relationships between structure and function in prokaryotic cells can be analyzed and explained. Because prokaryotic cells lack true nuclei, their genetic material and cell parts are not bound in a membrane, which means these parts float freely around inside the cell. Nearly all prokaryotic cells have structures called cell walls that function to give them protection and a fixed shape. Because of their rigid shape, about half of all prokaryotes have structures called flagella, which are whip-like tails that function to allow movement. Prokaryotes divide much faster than eukaryotic cells. They reproduce by simple cell division, creating clones of themselves. Their high rate of reproduction is one reason why these single-celled organisms are so successful. All bacteria are prokaryotic. Because they are much simpler, prokaryotes are thought to have existed for millions of years before eukaryotes evolved.

Proclamation 2024: Report of New Content (08/25/2023)

Page 1086 of 1830

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Original Text: New Content

Updated Text:

- What was the problem you were trying to solve? We needed to create a process for separating the substances in a mixture.
- How well did your solution work? What would you do differently if you had to do it again? Sample response: Our solution worked well. However, some salt was left on the sand in the end. Next time, we might pour a bit more water over the sand to separate more of the salt.
- What is a pure substance? Sample responses: pure forms of matter that cannot be separated or purified further into other components by physical means; made entirely of the same type of substance; made up of all the same type of atoms or molecules
- What allows pure substances to be separated from mixtures?  
Substances can be separated because of differences between their properties. Salt can be removed from salt water because the water evaporates and the salt remains. Iron and sand can be separated by a magnet because only the iron is magnetic.

Original Text: New Content

Updated Text: How do ocean currents and air masses interact to produce typhoons and hurricanes?

- A. An area of low pressure is produced when warm ocean currents heat the air above. Strong winds are produced as the surrounding air rapidly fills this area.
- B. An area of high pressure is produced when cold ocean currents cool the air above. Light winds are created as the surrounding air works to disrupt these areas.
- C. Strong winds are produced when the air reaches extremely high humidity due to warm ocean currents. The winds act quickly to reach a state of equilibrium.
- D. Light wind results when the air reaches low humidity due to cooling ocean currents. The winds move steadily until the system reaches a state of equilibrium.

[Correct Answer: A]

Updated Text: FACILITATING THE LEARNING

Time: 5 minutes

Review with students the conditions that seeds need to germinate. Introduce the project to students. Lead a class discussion by asking:

ASK What would be some conditions that you would need to consider when designing your terrarium-style greenhouse?

[Sample Student Response:

- the types of substrate that would be best for the germinating seeds, as well as growing roots
- amount of space the container provides as compared to the needs of the plants
- the amount of time it takes for the seeds to germinate
- moisture, light, and space needs of the plants]

Updated Text: Part B

Which statement supports the answer to Part A?

- A. By binding reactant molecules, enzymes aid in the formation and breaking of bonds.
- B. Enzymes give off energy to increase the number of collisions between the reactants.
- C. Enzymes aid in reducing dangerous reactions that occur within organisms.
- D. High levels of activation energy are needed for enzymes to work properly.

Original Text: New Content

Updated Text: SETTING THE PURPOSE

Time: 5 min

Explain to students that the purpose of this activity is to help students understand the importance of seed form and function for dispersal in nature, and how these can be applied to design of everyday products. If time allows, introduce the concept of biomimicry by explaining that it involves using nature as inspiration for solving human problems and improving technology, and provide examples of biomimicry such as hook and loop fasteners, inspired by burrs, and solar cells, inspired by photosynthesis. Have students brainstorm to think of other examples and to distinguish between biomimicry and coincidence of human design with nature's forms and functions. Have students think pair share about such examples and then probe for prior knowledge.

ASK What do you know about seeds that could be used in the design of a product?

Sample student response: Seeds have evolved over time to possess various characteristics that aid in their dispersal and germination, such as hooks, barbs, wings, and buoyancy. These adaptations can inspire and inform the design of products such as hook and loop fasteners.

Updated Text: Part B

Which statement supports the answer to Part A?

- A. The leopards evolved into a new species that we now recognize as the jaguar.
- B. Evidence shows that the continents were once a large landmass known as Pangaea.
- C. Domesticated animals have traveled with humans across water for many centuries.
- D. Scientists have proven that jaguars crossed the Bering Land Bridge into Asia.

Updated Text: FACILITATING THE LEARNING

Time: 10 min

To help students with research for their project, consider providing them with ideas for resources and guidance to research and understand the chromosomal disease they choose to study. Encourage them to think critically about the genetic technology available for treatment and how it can be applied to the disease as well as to consider a variety of options for their presentation. As students prepare for their research,

ASK: How will you identify the chromosome involved and its normal function? Sample response: By researching the specific chromosomal disease and looking at genetic and scientific resources

How will you determine the change in function related to the disease? Sample response: By studying the effects of the mutation on the chromosome and the corresponding protein it encodes

How will you determine how the disease is diagnosed and treated? Sample response: By researching medical and scientific resources, consult with experts, and examining case studies

How will you identify how doctors could use genetic engineering to treat this disease? Sample response: By researching and analyzing the latest advancements in genetic engineering techniques and consider their potential applications for treating the disease

Time: 40 min

Constructing a 3D Model of the Cell Membrane

Before students begin, have them brainstorm how they will use the materials to make their models. Students should consider what each material could represent and its role in the structure and function of the bilayer. For example, lead students to think how to use cotton swabs to represent the phospholipid bilayer, and to conclude that each cotton swab represents a hydrophilic head and the stick is the hydrophobic tail.

As students work, guide them to identify specific anatomical features to compare and to use appropriate terminology related to homologies and convergent evolution. In particular, they may need practice using the rather long scientific names. Guide the students in identifying potential sources of error or bias in the data and in drawing conclusions from

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

the data.

ASK What are four potential sources of error or bias in the data and in drawing conclusions based on the evidence presented in the data? Sample student answer:

- Sampling bias: Data may not be representative of the entire population if the sample was not randomly selected.
- Measurement error: errors in measurement caused by inaccurate tools or human error, can lead to inaccurate data.
- Interpretation bias: researchers' beliefs or opinions may influence their interpretation of the data, leading to bias in the conclusions drawn.
- Extraneous variables: other factors that were not accounted for may have influenced the data and conclusions drawn.

Updated Text: FACILITATING THE LEARNING

Time: 5 min

As students read the text, probe for understanding, listening for misconceptions and questions to share with the class. In particular, be sure that students are using the relevant vocabulary and concepts related to radiometric dating as a one minute check in. Have students quick write a sentence using relevant words.

ASK How would you use these words in a sentence: half-life, common ancestry and radiometric data? Sample student response: Radiometric data can be used to determine the half-life of radioactive isotopes, which can then be used to estimate the age of rocks and fossils, providing evidence for common ancestry between species that lived in the past.

Original Text: New Content

Updated Text: Explain the Difference In your own words, explain the difference between hypothesis, theory, and law, and give an example of each. Use examples from the field of biology. Sample response: A hypothesis is testable explanation based on prior knowledge, research, or observation used to investigate a scientific question. Hypotheses are used to investigate a scientific question. However, only hypotheses that have broad applicability are usually considered to be theories. An example of a hypothesis is as follows: A scientist has a hypothesis that altering one specific gene in the wheat will allow it to withstand extreme temperatures. Therefore, the scientist conducts an investigation to determine if genetically modified wheat can survive the long, cold winters in the northern United States. After much testing and collection of data, if the hypothesis is repeatedly shown to be true, it can become a theory. A theory describes why things happen. A theory is an explanation that is strongly supported by scientific evidence. An example of a theory is as follows: The theory of evolution is a widely accepted theory because it is supported by a wide range of evidence, such as the fossil record, genetic evidence, and field and experimental observations. Sometimes there are new developments that can cause a theory to change. Once a theory is repeatedly tested and accepted by the scientific community, it becomes a law. A law is a statement that describes a natural phenomenon that always happens the same way under the same set of circumstances. An example of a law is as follows: Mendel's work on inheritance is considered a law because it defines how traits are passed to offspring and applies to living organisms.

Original Text: New Content

Updated Text: Protein X is a potential treatment for leukemia. The gene encoding protein X was inserted into two different viral vectors, one retrovirus (RV) and one adeno-associated virus (AAV). The viruses were then injected into a subject. The image shows the polymerase chain reaction (PCR) results for in vivo expression of the gene for protein X. The thickness of the band is an indication of how much mRNA for the protein is present.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Current Page Number(s): 30

Location: Going Deeper: English Language Development, paragraph at the top of page 30

Original Text: New Content

Updated Text: At the end of the paragraph, add: "PhD Science Texas allows and encourages the use of students' home language as an instructional support. Examples of these supports appear within the driving question board, anchor chart, and anchor model routines. Utilizing the environmental print in the classroom also allows students to make connections between their home language and English. The use of instructional routines simultaneously promotes science learning and English proficiency for English language learners and allows learners multiple entry points into participation. Establishing repeatable routines allows students to engage more deeply in learning opportunities when they understand the structures to communicate. See the Instructional Routines section in this Implementation Guide for further details."

**Component: *Implementation Guide: Levels K-5***

ISBN: 9798888114346

Current Page Number(s): 31

Location: Going Deeper: English Language Development, Sentence Frames and Word Banks; second paragraph, second sentence

Original Text: New Content

Updated Text: "A word bank might include leveled terms for English learners based on their proficiency levels (beginning, intermediate, advanced, or advanced-high level) or challenging terms for students working above grade level."

**Component: *Implementation Guide: Levels K-5***

ISBN: 9798888114346

Current Page Number(s): 39

Location: Implementation and Instructional Resources

Original Text: New Content

Updated Text: New section added: Communicating with Caregivers

**Component: *Implementation Guide: Levels K-5***

ISBN: 9798888114346

Current Page Number(s): 5

Location: Introduction: Research in Action

Original Text: New Content

Updated Text: To address use of students' home language, additional research in action that references The English Learners Success Forum's (ELSF's) Guidelines for Improving Science and Engineering Materials for Multilingual Learners and guides PhD Science Texas philosophy was added to the table.

## **Subject: Science, Grade 2**

### **Program: *PhD Science Texas Level 2 Texas Program Bundle (Modules 1-3): TEKS***

**Component: *Matter with Spotlight Lessons on Weather Events Teacher Edition***

ISBN: 9798885885218

Current Page Number(s): 442

Location: Learn: Record Weather Information, paragraph above the sample student response table, last sentence

Original Text: New Content

Updated Text: Revise the last sentence before the sample student response table to read: "Discuss the safety rules for working outside and with thermometers."

Below the revised sentence, insert the following Teacher Question and sample student responses:

"What safety practices are important when taking measurements outdoors?"

- We should wear safety goggles to protect our eyes.

-We should not throw or tap thermometers on anything, and, if a thermometer breaks, we should never touch the pieces.

-We should never look directly at the Sun."

**Component: *Matter with Spotlight Lessons on Weather Events Teacher Edition***

ISBN: 9798885885218

Current Page Number(s): 443

Location: Learn: Record Weather Information, inline Check for Understanding box, TEKS Assessed

Original Text: New Content

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Updated Text: In the TEKS Assessed box, insert 2.1C above 2.1D with all words in bold except for "classroom and":

"2.1C Identify, describe, and demonstrate safe practices during classroom and field investigations as outlined in Texas Education Agency–approved safety standards."

**Component: *Matter with Spotlight Lessons on Weather Events Teacher Edition***

ISBN: 9798885885218

Current Page Number(s): 443

Location: Learn: Record Weather Information, inline Check for Understanding box, Evidence

Original Text: New Content

Updated Text: In the Evidence box, replace "use" with "demonstrate safe practices (2.1C) while using". Revised sentence should start: "Students demonstrate safe practices (2.1C) while using tools to accurately . . ."

## Subject: Science, Grade 3

**Program: *PhD Science Texas Level 3 Texas Program Bundle (Modules 1-3): TEKS***

**Component: *Survival and Change Teacher Edition***

ISBN: 9798885885256

Current Page Number(s): 255

Location: Learn: Read About Plant Survival Strategies; before Revise Anchor Chart

Original Text: New Content

Updated Text: [New paragraph] "Tell students that in other parts of the world, animals such as caribou pikas eat mosses. Invite students to share what they learned about the effects of cold temperatures in winter and the lack of precipitation, and how they affect animals that eat moss. Ask students to respond to the question in their Science Logbook (Lesson 23 Activity Guide)."

[Teacher Question] "How would cold temperatures and a lack of precipitation affect a pika's growth?"

[Sample Student Response] -A pika would not grow as much in cold temperatures and with less precipitation if there was not as much moss growth."

**Component: *Earth Changes with Spotlight Lessons on Changes in Matter Teacher Edition***

ISBN: 9798885885249

Current Page Number(s): 53

Location: Learn: Compare Land Samples; last paragraph

Original Text: New Content

Updated Text: To the end of the last paragraph in the Learn, add: "Explain that plants and other materials on Earth's surface are continuously broken down into smaller pieces, resulting in the formation of new soil." Insert Spotlight on Knowledge and Skills icon after the added inline text.

Insert corresponding sidebar Spotlight on Knowledge and Skills box with the following text:

"Spotlight on Knowledge and Skills

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

During these lessons, students investigate how the cycling of matter such as rocks, soil, and plant material contributes to the formation of land (3.5E). In Level 4, students further explore the cycling of matter as they investigate how energy flows and matter cycles through food webs (4.12B)."

**Component: *Forces and Motion with Spotlight Lessons on the Solar System Teacher Edition***

ISBN: 9798885885263

Current Page Number(s): 485

Location: Lesson 2, Learn, Define Thermal Energy

Original Text: New Content

Updated Text: Insert the following text:

"Direct students' attention to different objects around the classroom, and then ask students to provide examples of what could cause different objects to heat up.

Sample student responses:

- When a book gets left on the radiator, the book feels hot by the end of class.
- The desks that are closest to the window are warmer than the desks that are far away from the window.
- Light bulbs also give off heat. I can feel the heat when I put my hand near the lamp.

Acknowledge the variety of examples provided by students. Then confirm that there are many examples of thermal energy in students' daily lives, including hair dryers, clothes dryers, and convection ovens."

Location: Learn: Construct an Argument About Rocks; paragraph above the inline English Language Development box

Original Text: New Content

Updated Text: "Establish that weathering contributes to the cycling of rock material on Earth."

**Component: *Survival and Change Teacher Edition***

ISBN: 9798885885256

Current Page Number(s): 226

Location: Learn: Introduce Butterfly Life Cycle, paragraph before the Teacher Question

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Original Text: New Content

Updated Text: "Review that students have observed the stages of a butterfly's life cycle in different ways, including individual drawings of each stage on cards and an illustration of all the stages together."

Add a Teacher Question: "What are some other ways we could represent a butterfly's life cycle?"

Add two sample student responses:

"- We could take photographs of the caterpillar in our classroom as it goes through its life cycle. Then we can use those photos to show its life cycle.

- Maybe we could draw a picture to show each stage of a butterfly's life cycle."

Add a new paragraph: "Acknowledge student responses, and confirm that there are many possible ways to represent a butterfly's life cycle. Prompt students to create another representation by illustrating the life cycle of a butterfly in their Science Logbook (Lesson 20 Activity Guide A)."

Add sample student response image of a student drawing of the butterfly life cycle.

**Component: *Forces and Motion with Spotlight Lessons on the Solar System Teacher Edition***

ISBN: 9798885885263

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Updated Text: Insert new text as follows:

"Ask students to use what they learned about magnets to answer the questions in their Science Logbook (Lesson 22 Activity Guide). Invite students to share their responses with the class."

[Insert new Teacher Question.] "Over 2,000 years ago, humans made the scientific discovery that some types of rocks attract metals. How have past discoveries about magnetic forces affected society and our lives today?"

Sample student responses:

-Today we can use magnets to solve easy problems like holding papers on a refrigerator and really hard problems like moving an elevator sideways.

-Magnets can make people's lives better, like by making it easier for people who have trouble zipping their clothes."

[Insert new Teacher Question.] "Think about the magnet text you read. How do you think that using magnets to solve problems affected science?"

Sample student responses:

-I think we can do more with science because once we figure out how to solve a problem using magnets, we can use what we learned to solve new problems.

-I think it has helped humans find new ways to protect the environment because the maglev train is better for the environment than normal trains.

[body text] Summarize that the class learned some of the ways that people on Earth use magnets to solve problems."

## **Component: *Forces and Motion with Spotlight Lessons on the Solar System Science Logbook***

ISBN: 9798885885447

Current Page Number(s): 15

Location: Lesson 5

Original Text: New Content

Updated Text: Add a new activity guide for students to create a tree map during the pinwheel activity.

## **Component: *Survival and Change Teacher Edition***

ISBN: 9798885885256

Current Page Number(s): 14

Location: Focus Standards, 3.1F

Original Text: New Content

Updated Text: Apply italics to "bar graphs," in 3.1F.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

**Component: *Survival and Change Teacher Edition***

ISBN: 9798885885256

Current Page Number(s): 241

Location: Learn: Describe Strategies to Survive Seasonal Changes; first set of sample student responses

Original Text: New Content

Updated Text: "Ask students to share how they think the growth of an animal in the Stay category would be affected by the changes in temperature and precipitation."

**Component: *Forces and Motion with Spotlight Lessons on the Solar System Teacher Edition***

ISBN: 9798885885263

Current Page Number(s): 293

Location: Learn, Imagine a Solution

Original Text: New Content

Updated Text: Replace "Why is the ceramic disc magnet able to hold more paper clips?" with "How does the structure of each magnet affect the number of paper clips that the magnet can hold?"

**Component: *Forces and Motion with Spotlight Lessons on the Solar System Science Logbook***

ISBN: 9798885885447

Current Page Number(s): 15

Location: Lesson 5

Original Text: New Content

Updated Text: Add "B" to "LESSON 5 ACTIVITY GUIDE" under the name line and above "Speed Investigation"; update the header to include "B".

**Component: *Survival and Change Science Logbook***

ISBN: 9798885885430

Current Page Number(s): 26

Location: Lesson 8

Original Text: New Content

Updated Text: A new activity guide for students to use a blank bar graph template to create a bar graph of the air temperature in either Houston, TX, or Atlanta, GA.

**Component: *Survival and Change Teacher Edition***

ISBN: 9798885885256

Current Page Number(s): 242

Location: Learn: Describe Strategies to Survive Seasonal Changes; first Teacher Question

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Original Text: New Content

Updated Text: "How do you think cold winter weather conditions affect the animal's activity?"

**Component: *Forces and Motion with Spotlight Lessons on the Solar System Teacher Edition***

ISBN: 9798885885263

Current Page Number(s): 293

Location: Learn, Imagine a Solution, Check for Understanding, TEKS Assessed box

Original Text: New Content

Updated Text: Insert the following standard above on its own row above 3.7A:

"3.5F Explain the relationship between the structure and function of objects, organisms, and systems."

[apply bold to "Explain the relationship between the structure and function of objects"]

**Component: *Forces and Motion with Spotlight Lessons on the Solar System Science Logbook***

ISBN: 9798885885447

Current Page Number(s): 27

Location: Lesson 10 Activity Guide

Original Text: New Content

Updated Text: New activity added to the lesson: "Plan an investigation about how to change the sooter's motion. Record the steps of your investigation plan."

Also include write-on lines.

**Component: *Survival and Change Science Logbook***

ISBN: 9798885885430

Current Page Number(s): 27

Location: Lesson 8 Activity Guide B

Original Text: New Content

Updated Text: In the header, change "B" to "C" so it reads: "Level 3 ▶ Survival and Change ▶ Lesson 8 ▶ Activity Guide C"

**Component: *Survival and Change Teacher Edition***

ISBN: 9798885885256

Current Page Number(s): 243

Location: Learn: Describe Strategies to Survive Seasonal Changes; second Teacher Question after the inline Check for Understanding box, first sample student response

Original Text: New Content

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Updated Text: "When an environment gets snowy and a lot colder in winter, some animals don't have a way to stay warm or have enough food, so they move away until spring."

**Component:** *Survival and Change Teacher Edition*

ISBN: 9798885885256

Current Page Number(s): 244

Location: Learn: Describe Strategies to Survive Seasonal Changes; after the inline English Language Development box

Original Text: New Content

Updated Text: Summary of new content added to address TEKS 3.12A. The teacher explains that hibernation and migration are strategies that allow some animal populations to thrive during seasonal changes. The teacher explains that animal populations thrive, or grow in size, when the animals within the population have offspring. An English Language Development box was added to support the term "thrive" as "to grow" or "to develop well."

**Component:** *Earth Changes with Spotlight Lessons on Changes in Matter Teacher Edition*

ISBN: 9798885885249

Current Page Number(s): 6

Location: Module Map, Lessons 3-4, Texas Essential Knowledge and Skills column

Original Text: New Content

Updated Text: Add "3.5E" above 3.5G.

**Component:** *Forces and Motion with Spotlight Lessons on the Solar System Teacher Edition*

ISBN: 9798885885263

Current Page Number(s): 293

Location: Learn, Imagine a Solution, Check for Understanding, Evidence box

Original Text: New Content

Updated Text: "Students use subtraction to identify the relationship (3.2C) between two types of magnets (3.5C) and determine that the stronger ceramic disc magnet is structured to attract more paper clips (3.5F, 3.7A)."

**Component:** *Forces and Motion with Spotlight Lessons on the Solar System Science Logbook*

ISBN: 9798885885447

Current Page Number(s): 47

Location: Lesson 16

Original Text: New Content

Updated Text: "What is the relationship between the structure of each material and the distance the marble travels?"

**Component:** *Survival and Change Science Logbook*

ISBN: 9798885885430

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Current Page Number(s): 27

Location: Lesson 8 Activity Guide B

Original Text: New Content

Updated Text: In the title, change "B" to "C" so it reads: "LESSON 8 ACTIVITY GUIDE C"

**Component: *Survival and Change Teacher Edition***

ISBN: 9798885885256

Current Page Number(s): 246

Location: Land, first set of sample student responses

Original Text: New Content

Updated Text: "How does winter weather affect butterflies?"

**Component: *Earth Changes with Spotlight Lessons on Changes in Matter Teacher Edition***

ISBN: 9798885885249

Current Page Number(s): 13

Location: Focus Standards, Texas Essential Knowledge and Skills for Science

Original Text: New Content

Updated Text: Between 3.5D and 3.5G, add a new row: "3.5E investigate the flow of energy and cycling of matter through systems;". Apply italics to "investigate the cycling of matter through systems"

**Component: *Forces and Motion with Spotlight Lessons on the Solar System Teacher Edition***

ISBN: 9798885885263

Current Page Number(s): 326

Location: End-of-Module Assessment

Original Text: New Content

Updated Text: "Each object exerts a force in the system. Draw a line to connect each object to the force the object exerts."

"Object in the System".

**Component: *Forces and Motion with Spotlight Lessons on the Solar System Teacher Edition***

ISBN: 9798885885263

Current Page Number(s): 49

Location: Lessons 4-6 Overview, Materials Table, Student Materials, fifth row

Original Text: New Content

Updated Text: "Science Logbook (Lesson 5 Activity Guides A and B)"

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

## **Component: *Survival and Change Science Logbook***

ISBN: 9798885885430

Current Page Number(s): 72

Location: Lesson 20

Original Text: New Content

Updated Text: Add Lesson 20 Activity Guide A for students to illustrate a butterfly life cycle.

## **Component: *Survival and Change Teacher Edition***

ISBN: 9798885885256

Current Page Number(s): 246

Location: Land, first set of sample student responses, first sample student response, second sentence

Original Text: New Content

Updated Text: "Some butterflies have to migrate because they aren't suited to the environment during the winter and may not have enough food."

## **Component: *Earth Changes with Spotlight Lessons on Changes in Matter Teacher Edition***

ISBN: 9798885885249

Current Page Number(s): 43

Location: Standards Addressed, Texas Essential Knowledge and Skills, Recurring Themes and Concepts table

Original Text: New Content

Updated Text: [Standard] "3.5E"

[Student Expectation] "Investigate the flow of energy and cycling of matter through systems."

[Lesson(s)] "3, 4"

Apply bold to "Investigate the cycling of matter through systems."

## **Component: *Forces and Motion with Spotlight Lessons on the Solar System Teacher Edition***

ISBN: 9798885885263

Current Page Number(s): 326

Location: End-of-Module Assessment Sample

Original Text: New Content

Updated Text: "Each object exerts a force in the system. Draw a line to connect each object to the force the object exerts."

"Object in the System".

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Current Page Number(s): 49

Location: Lessons 4-6 Overview, Materials Table, Student Materials

Original Text: New Content

Updated Text: "Sticky notes (6)" [Lesson(s)] "5"

**Component: *Survival and Change Science Logbook***

ISBN: 9798885885430

Current Page Number(s): 73

Location: Lesson 20 Activity Guide

Original Text: New Content

Updated Text: Add "B" to the header so it reads: "Level 3 ▶ Survival and Change ▶ Lesson 20 ▶ Activity Guide B"

## **Subject: Science, Grade 4**

**Program: *PhD Science Texas Level 4 Texas Program Bundle (Modules 1-3): TEKS***

**Component: *Earth Features with Spotlight Lessons on Mixtures and Solutions Teacher Edition***

ISBN: 9798885885270

Current Page Number(s): 496

Location: Materials section; Teacher Materials table, third row

Original Text: New Content

Updated Text: ", digital scale (1)"

**Component: *Earth Features with Spotlight Lessons on Mixtures and Solutions Teacher Edition***

ISBN: 9798885885270

Current Page Number(s): 504

Location: Learn: Analyze Data; after the inline English Language Development box

Original Text: New Content

Updated Text: Insert the new activity for students to explore mass and relative density in the attached file after the inline English Language Development box.

**Component: *Earth Features with Spotlight Lessons on Mixtures and Solutions Teacher Edition***

ISBN: 9798885885270

Current Page Number(s): 505

Location: Learn: Analyze Data; inline Check for Understanding box

Original Text: New Content

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Updated Text: Replace: "Students explain the relative density of materials based on the data they collected to classify materials based on whether they sink or float in water." with: "Students use data they collect to classify materials by mass and relative density."

**Component: *Earth Features with Spotlight Lessons on Mixtures and Solutions Teacher Edition***

ISBN: 9798885885270

Current Page Number(s): 505

Location: Learn: Analyze Data; inline Check for Understanding box; TEKS Assessed

Original Text: New Content

Updated Text: Apply bold to "mass,"

**Component: *Earth Features with Spotlight Lessons on Mixtures and Solutions Teacher Edition***

ISBN: 9798885885270

Current Page Number(s): 505

Location: Learn: Analyze Data; inline Check for Understanding box; Evidence and Next Steps table--new first row

Original Text: New Content

Updated Text: Add an Evidence row that reads: "Students use patterns (4.5A) in how they classify materials by mass (4.6A) as evidence to support the claim (4.3A) that whether a material sinks or floats is not determined by mass." To the top of the Next Steps section, add a Next Steps row that reads: "If students do not use evidence from their sort to support the claim that whether an object sinks or floats depends on relative density and not mass, ask guiding questions such as this: Did all the materials with the least mass float?"

**Component: *Earth Features with Spotlight Lessons on Mixtures and Solutions Teacher Edition***

ISBN: 9798885885270

Current Page Number(s): 461

Location: Learn: Describe and Classify Properties of Matter, sample class tree map

Original Text: New Content

Updated Text: "At this point in learning, students may express the misconception that the ability to sink or float in water depends on mass. In Lesson 5, students will learn that relative density is a property of a material that determines its ability to sink or float in water. If needed, return to the tree map in Lesson 5 and create a new category for relative density."

**Component: *Earth Features with Spotlight Lessons on Mixtures and Solutions Science Logbook***

ISBN: 9798885885454

Current Page Number(s): 131

Location: Lesson 5 Activity Guide; end of Analyze Data section/before the Reflection section

Original Text: New Content

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Updated Text: Insert new activity for students to explore mass and relative density

See PHDTX24\_LOGL4M01\_SPL05\_4.6Aii\_newSLquestion\_RF.docx

**Component:** *Earth Features with Spotlight Lessons on Mixtures and Solutions Teacher Edition*

ISBN: 9798885885270

Current Page Number(s): 495

Location: Standards Addressed, Texas Essential Knowledge and Skills, Content Standards table, 4.6A

Original Text: New Content

Updated Text: Apply bold to "mass,"

**Component:** *Earth Features with Spotlight Lessons on Mixtures and Solutions Teacher Edition*

ISBN: 9798885885270

Current Page Number(s): 496

Location: Materials section; Teacher Materials table, second row

Original Text: New Content

Updated Text: Revision: "Chart paper (2 sheets)"

**Component:** *Earth Features with Spotlight Lessons on Mixtures and Solutions Teacher Edition*

ISBN: 9798885885270

Current Page Number(s): 496

Location: Materials section; Teacher Preparation table

Original Text: New Content

Updated Text: Add a table row that reads: [Teacher Preparation] "Measure and record the mass of each material used in the relative density stations." [Lesson(s)] "5"; this row will go under the existing row in the Teacher Preparation section.

## Subject: Science, Grade 5

**Program:** *PhD Science Texas Level 5 Texas Program Bundle (Modules 1-3): TEKS*

**Component:** *Sun, Earth, and Moon System with Spotlight Lessons and a Capstone Project on Forces, Motion, and Energy Teacher Edition*

ISBN: 9798885885324

Current Page Number(s): 527

Location: Land, after the first paragraph

Original Text: New Content

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Updated Text: Add a Teacher Question: "Why is it important to complete a trial with 0 N?"

Add two sample student responses:

"-So we can determine what happens when no force is applied to the train model.

-So we can model balanced forces to determine how they affect the train's motion."

Add a new paragraph: "Agree that applying a force of 0 N will demonstrate balanced forces acting on the train."

**Component: *Earth Processes with Spotlight Lessons on Physical Properties of Matter Teacher Edition***

ISBN: 9798885885300

Current Page Number(s): 235

Location: Launch, first paragraph on page 235, first sentence

Original Text: New Content

Updated Text: "Point to and read aloud the title. Tell students that the graph shows predictions about the volume of water (in acre-feet) available in Texas for the years 2020 through 2060. Explain that the predictions are based on patterns that people observed in data in the past."

**Component: *Sun, Earth, and Moon System with Spotlight Lessons and a Capstone Project on Forces, Motion, and Energy Teacher Edition***

ISBN: 9798885885324

Current Page Number(s): 529

Location: Learn: Conduct Force Investigations, sample student response data table

Original Text: New Content

Updated Text: Add a new row to the data table above the row for 3 N. In the new row:

Strength of Force column: "0 N"

Trial 1 through Trial 5 columns: "No motion"

Middle Number column: "No motion"

**Component: *Earth Processes with Spotlight Lessons on Physical Properties of Matter Teacher Edition***

ISBN: 9798885885300

Current Page Number(s): 235

Location: Launch, first paragraph on page 235, second and third sentences

Original Text: New Content

Updated Text: "Work with students to add a title to each axis."

**Component: *Sun, Earth, and Moon System with Spotlight Lessons and a Capstone Project on Forces, Motion, and Energy Teacher Edition***

ISBN: 9798885885324

Current Page Number(s): 530

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Original Text: New Content

Updated Text: Revised Evidence column: "At 5 N, the train model traveled 100 cm in 0.85 seconds. At 3 N, the train model traveled 100 cm in 1.76 seconds. At 0 N, the train model did not move. Our observations show that when we use a stronger force, the train model travels faster."

**Component: *Earth Processes with Spotlight Lessons on Physical Properties of Matter Teacher Edition***

ISBN: 9798885885300

Current Page Number(s): 235

Location: Launch

Original Text: New Content

Updated Text: Delete the following text and sample student graph: "What data does this graph show? . This graph shows how much water is available each year in Texas. . The graph shows the amount of water that will be available in future years. Use student responses to create a title for the graph. Instruct students to record the title on the graph in their Science Logbook (Lesson 22 Activity Guide A).

Sample student response:

**Component: *Sun, Earth, and Moon System with Spotlight Lessons and a Capstone Project on Forces, Motion, and Energy Teacher Edition***

ISBN: 9798885885324

Current Page Number(s): 530

Location: Learn: Analyze Data and Revise Claims, inline Check for Understanding box, TEKS Assessed, 5.7A

Original Text: New Content

Updated Text: Apply bold to "equal and" in 5.7A.

**Component: *Earth Processes with Spotlight Lessons on Physical Properties of Matter Teacher Edition***

ISBN: 9798885885300

Current Page Number(s): 236

Location: Launch, paragraph that begins "Highlight responses that relate. . ."

Original Text: New Content

Updated Text: New content added to address TEKS 3.7B. Students record their plan for a descriptive investigation about how to move a scooter board with an attached rope from a start line to finish line by changing its motion. Student investigation plans should include steps for pulling on the rope to move the scooter from one location to another while changing its motion (e.g., how to stop or start the scooter moving or move it faster and slower).

Location: Replace the last three paragraphs in the lesson plan with the following paragraphs (note that the first of the new paragraphs specifically pertains to diverse scientists):

Original Text: New Content

Updated Text: "Use Slides 11-19 to introduce two diverse scientists whose research contributed to the field of communication technology, Hedy Lamarr and Jesse Russell. Use the slides and slide notes to inform the discussion. Reiterate that Hedy Lamarr was known as a famous actress, but she had an innovative spirit and a strong desire to make a difference. Jesse Russell overcame disadvantages to be a successful engineer and inventor. Use slide 18 to emphasize the importance of having diverse people contribute to scientific thought and how it benefits society. With a diversity of

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

experiences comes a diversity of thoughts and ideas. Slide 19 provides an opportunity for students to identify the contributions and importance of diverse scientists.

“Use slides 20-23 to introduce students to how to evaluate scientific research from a cost-benefit perspective. The slides provide a narrative of what a cost-benefit analysis is. Use the slide notes to guide the discussion and provide thought starters for students as they evaluate the costs and benefits of the research of Hedy Lamarr and Jesse Russell.

Additionally, ask students the following questions:

How would our world be different today without these technologies?

Hedy Lamarr’s ideas were initially rejected, but she continued her pursuit. Was her investment worthwhile?

Jesse Russell overcame hardship as a child but was accepted to a university. Did his hard work pay off?

Location: In Grade 7, Unit 2, Lesson 11, Section 2 (Challenge: Develop a Model of Ocean Thermal Expansion)

Original Text: New Content

Updated Text: Insert the following section into the Develop a Plan section after the 'Pass out the Rising Seas...' sentence.

“Emphasizing Planning Investigations

After a more open-ended discussion, focus students attention on the actual planning of the investigation. Remind them that, among other considerations, an effective descriptive investigation:

Answers a scientific question

Focuses on the relevant details to observe or measure

Uses the appropriate tools

Lead a discussion of each bullet point to help students plan the details of their investigation. In this case, students are trying to answer the question, “What happens when I warm up the ocean?” They’ll want to measure the amount the water expands as the amount of heat increases. They’ll need tools that model a heat source and an ocean, and tools to measure the amount of thermal expansion and temperature.”

Location: In Grade 7, Unit 2, Lesson 11, Section 2 (Challenge: Develop a Model of Ocean Thermal Expansion)

Original Text: New Content

Updated Text: Lead a class discussion about three critical questions about safety:

What hazards might we face?

What practices can we employ to avoid these hazards?

What safety equipment will help protect us?

In this investigation, students are working with a heat source (hair dryer or heat lamp) and so the biggest hazards are a contact burn and electrocution. Students should come up with a safety plan with practices to minimize these hazards such as operating the equipment in an 'safe zone' outside of high traffic areas and placing a hot hair dryer in a designated location on the table after use. They should always use insulated gloves or mittens when handling materials that might be hot.

Updated Text: Add an activity where students plot earthquakes on a map to look for patterns: “Where do earthquakes happen on Earth? California? Japan? Anywhere? Let’s look at the pattern. Create a large poster-sized grid for making a map of the world. It should extend from -180 to 180 on the x-axis (longitude) and -90 to 90 on the y-axis (latitude) – see Teacher Prep section. Teach students about how to locate the longitude and latitude to indicate the exact position of any spot on the planet. We’ll be using it to plot the epicenter of earthquakes around the world. The IRIS Seismic Monitor is a fantastic interface for teaching about earthquakes and includes a list of earthquakes in the last 30 days (<http://ds.iris.edu/seismon/eventlist/index.phtml>). Have students take turns plotting 1-2 earthquakes each on the class map grid (complete this task spread out over a couple days by having students take turns while the class is engaged in working on other tasks). Students may be able to see patterns emerging after 30 or 40 points, but the patterns become very clear after 100 or 200 points. Have students compare the location of earthquakes with the location of Earth’s highest mountain ranges. Do they match up? Why or why not? Have students notice other patterns and record observations and questions in their science notebooks.” Include the new slides.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Updated Text: Add After students have completed their graphs, ask students if there are ways to reduce the cost of a hurricane disaster. Give students time to share their ideas—you may choose to do a quick think-pair-share. Students may suggest:

- Buildings can be designed to withstand high winds
- Flood walls or levees can be constructed to keep flood waters from moving inland
- Emergency alerts go out to tell people to evacuate, which can save lives

These are all ways that communities can prepare for hurricanes. These preparations are ways to mitigate, or help prevent damage from hurricanes. Of course, these preparations cost money. Show the Benefits Cost display Lesson 3.3c-benefits-cost-display.pdf [SRP: see file content note below]. Explain that officials calculate a benefit-cost ratio when deciding whether it is worth investing in the mitigation (preparation). They do this by dividing the benefits by the costs. Ask students to list some benefits of preparing for a hurricane in advance. Students may suggest:

- Less damage to buildings and roads
- Less wildlife habitat loss
- Fewer lives lost

For each benefit, there is a savings. This amount is divided by the cost, which gives us a cost benefit ratio.

The Federal Insurance and Mitigation Administration (FEMA) determined that preparing for a disaster is less expensive than paying to clean up after a disaster. The FEMA website contains the chart shown in the Benefits-Cost display Lesson 3.3c-benefits-cost-display.pdf. Any ratio greater than 1:1 indicates that the benefits outweigh the costs. At the top of the chart, we see that the overall hazard benefit-cost ratio is \$4:1. Ask students which other items on the chart could be considered in a hurricane disaster. Students should suggest Hurricane Surge, and may also suggest Wind, and Riverine Flood. (Riverine refers to a river bank, which can flood during a hurricane.) Ask students if the benefits outweigh the costs for each hazard. (yes).

The Benefits Cost display Lesson 3.3c-benefits-cost-display.pdf contains the following image - see link.

[View Current Content](#)

Location: Grade 8, Unit 1, Lessons 11

Link to Updated Content:

[View Updated Content](#)

Original Text: New Content

Updated Text: Updated lesson to focus on energy conservation where students explain how energy transfer within the system causes the drag racer to start moving (weight falling converts gravitational potential energy to kinetic energy in the system) and the energy conversion from friction into heat.

**Component: *Online Lesson Plans***

Original Text: New Content

Updated Text: Inert the below after the bullets and before the "You will expand..." paragraph an Emphasizing Energy Conservation box and accompanying text as shown below (see link)

Remind students that the principle of Conservation of Energy states that energy can't get created or destroyed. But, it can transfer from one object to another or change forms. Have students provide three examples from the Greenhouse Reading of energy transfer from one object to another.

Energy transfer examples: Sun's radiation -> Earth; Land & Ocean -> Space; Radiation going to space -> Greenhouse gases; Greenhouse gases -> the planet.

Original Text: New Content

Updated Text: To complete this activity in one day, keep the car-building step very simple. Example: A very simple design would be to add four small sections of plastic straw, or four washers to the bottom of the block to reduce friction. Another possible design would be to make the dragster more aerodynamic so that the air resistance is lower. Note that it's much easier to measure a change in the rolling resistance of the car by changing the bottom of the block than to

measure changes in the air resistance at the low speeds of the classroom dragster. Also, if other materials are available in the classroom (e.g., aluminum foil, toothpicks), then students could be encouraged to consider these materials in their designs. The scale can be useful for students to explore how the mass of the materials affect the results of the experiment.

Updated Text: "Data shows that it takes Josie 22 minutes to get ready for school each morning. She likes to sleep in, so she is often late. Propose a solution to solve the problem of getting ready in 15 minutes or less. Which of the following might you propose? Select TWO correct answers.

A. Josie should pre-tie her shoes each night.

B. Josie should skip brushing her teeth to save 3 minutes each morning.

C. Josie should get her supplies ready the day before, so she isn't rushing to pack her backpack each morning.

D. Josie should pick out her clothes before bed each night, so she doesn't spend time choosing in the morning."

Current Page Number(s): TEKS Lesson 5.10.C, Día 4, Screen 3

Location: Paso 1, Paso 2, Paso 3 y Paso 4 paragraphs

Original Text: New Content

Updated Text: "Paso 1

Usa las proporciones para preparar tu modelo de río. Cubre el interior del rollo de toallas de papel con papel de aluminio. Llénalo parcialmente de modo que tenga unos dos tercios de arena. Asegúrate de que la arena tenga entre 5 y 7 cm de profundidad. Presiona la arena para que no se mueva.

Paso 2

Luego, usa los libros para elevar un lado del rollo de toallas de papel. Vierte agua en el fondo del molde para asar para formar un "océano". Coloca el rollo de toallas de papel de modo que la parte más baja se apoye en el molde, y el río desemboque en el océano.

Paso 3

En tu cuaderno, dibuja un mapa secuencial para mostrar el aspecto actual de tu modelo.

Paso 4

Ponte los lentes de seguridad. Vierte lentamente dos vasos de agua cerca de la parte superior del rollo, para que corra por el río. Observa lo que ocurre a lo largo del río y en la base del molde, en el océano."

Updated Text: "Muchas de las propiedades físicas observables y comprobables pueden usarse para comparar y contrastar otra materia, además de la que se estudia en las investigaciones.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Tal es el caso de cierta materia sólida, como las rocas. Los sólidos tienen un volumen definido y no adoptan la forma del recipiente que los contiene. Los líquidos, como el agua, también tienen un volumen definido, pero asumirán la forma del recipiente en el que se encuentran. Por ejemplo, al verter leche del cartón a un vaso, esta cambia de forma. Los gases, como el aire, no tienen un volumen fijo. Estos se expandirán para ocupar el recipiente que los contiene.

Otra propiedad que se puede usar para comparar y contrastar materia es el magnetismo. Un imán atraerá clips metálicos. La mayoría de los no metales, como el plástico y la madera, no serán atraídos por el imán."

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Current Page Number(s): TEKS Lesson 5.6.A, add new screen after Day 7 screen 3

Location: New full screen

Original Text: New Content

Updated Text: "Many observable or testable physical properties can be used to compare and contrast matter besides those explored in the investigations.

For example, some matter is solid, such as rocks. Solids have a fixed volume and do not take the shape of their container. Liquids like water also have a fixed volume, but they will take the shape of a container. For example, milk poured out of a carton into a glass changes its shape. Gases like air do not have a fixed volume. They will spread out to fill whatever container they are in.

Another property that can be used to compare and contrast matter is magnetism. A magnet will pull metal paper clips towards itself. Most nonmetals, such as plastic and wood, will not be attracted by a magnet."

Current Page Number(s): TEKS Lesson 5.10.C, Day 4, Screen 3

Location: Step 1, Step 2, step 3 and step 4 paragraphs

Original Text: New Content

Updated Text: "Step 1

Use proportions to set up your model river. Cover the inside of the paper towel roll with aluminum foil. Partially fill up your paper towel roll so that it is about two-thirds full of sand. Make sure the sand is about 5–7 cm deep. Pat down the sand so it does not move.

Step 2

Then, use your books to elevate one side of the paper towel roll. Pour water in the bottom of your roasting pan to form an "ocean". Place the paper towel roll so the lower end rests in the pan and the river drains into the ocean.

Step 3

In your notebook, draw a sequence map to show what your model currently looks like.

Step 4

Put on your goggles. Slowly pour two cups of water a little bit at a time near the top of the paper towel roll into your river. Watch what happens along the river and at the base of the pan in the ocean."

Original Text: New Content

Updated Text: "Todos los organismos son sistemas que necesitan energía para hacer cosas. Los seres humanos y otros animales obtienen energía de los alimentos. Cuando comes, la energía contenida en los alimentos como energía química entra en el sistema digestivo. Una vez allí, sufre cambios químicos como los que se describen en la lección TEKS 6.6.E Evidencias de cambios químicos. Un cambio que puede sufrir la energía química en los alimentos es que se transforma en otras formas de energía química, como el azúcar en sangre, que pueden usar tus otros sistemas corporales. Ya sea que muevas las piernas, que tu corazón bombee o que expulses aire de los pulmones y eso haga ruido, toda la energía para tus sistemas corporales proviene de los alimentos que comiste. El sistema nervioso transforma la energía química en energía eléctrica para funcionar. El cuerpo humano también transforma la energía química en energía térmica que ayuda a mantener constante una temperatura corporal cálida. Esta energía térmica finalmente se transfiere al entorno. El sistema digestivo absorbe los nutrientes de la materia en los alimentos para que los usen los diferentes sistemas del cuerpo, y toda la materia que no se puede utilizar se elimina como desecho."

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Updated Text: "La fotosíntesis dentro del sistema de las plantas también se relaciona con la conservación de la materia. La materia se conserva en este sistema porque hay el mismo tipo y número de átomos en los reactivos y los productos de la fotosíntesis. Los reactivos son las entradas de una reacción química, o lo que ingresa en ella. Los productos son las salidas de una reacción química, o lo que se produce en ella. Los elementos que participan en la fotosíntesis son carbono (C), oxígeno (O) e hidrógeno (H). Estos elementos se combinan de diferentes maneras para formar dióxido de carbono (CO<sub>2</sub>), agua (H<sub>2</sub>O), azúcar (C<sub>6</sub>H<sub>12</sub>O<sub>6</sub>) y oxígeno (O<sub>2</sub>).

Estas son tres maneras diferentes de describir la fotosíntesis.

- Las plantas usan la energía luminosa para convertir el dióxido de carbono y el agua en azúcar y oxígeno.
- dióxido de carbono + agua [arrow with "energía luminosa" label over the arrow] azúcar + oxígeno
- 6CO<sub>2</sub> + 6H<sub>2</sub>O [arrow with "energía luminosa" label over the arrow] C<sub>6</sub>H<sub>12</sub>O<sub>6</sub> + 6 O<sub>2</sub>

EXPLICA: ¿Qué debe ser verdadero para que la materia se conserve en el sistema de las plantas durante la fotosíntesis? Elige todas las opciones que correspondan.

- A. La masa de la energía luminosa usada en el proceso debe ser igual a la masa del dióxido de carbono, el agua, el azúcar y el oxígeno producidos.
- B. La masa del dióxido de carbono y el agua usados en el proceso debe ser igual a la masa del azúcar y el oxígeno producidos. [correct answer]
- C. El número de átomos de hidrógeno en los reactivos debe ser igual al número de átomos de hidrógeno en los productos. [correct answer]
- D. La masa del carbono en los reactivos debe ser igual a la masa del carbono en los productos. [correct answer]
- E. Los productos de la fotosíntesis deben ser los mismos que los reactivos."

Updated Text: "La primera computadora digital de mediados de los años 40 usaba 3,000 tubos de vacío para su procesador. Los tubos de vacío eran frágiles, propensos a fallar y difíciles de mantener. Se necesitó una gran inversión para desarrollar una alternativa a los tubos de vacío: el transistor. Unos años más tarde, los transistores sustituyeron a los tubos de vacío en el procesador. Los transistores son pequeños, livianos y, una vez que se invirtió el costo de desarrollo inicial, pueden producirse en masa a un costo relativamente bajo. ¿Cuál de las siguientes opciones describe el análisis de costo y beneficio del desarrollo de transistores?

A. Cuesta mucho dinero desarrollar transistores, por lo que no tenía mucho sentido producirlos dado que los tubos de vacío ya estaban disponibles.

[correct answer] B. Cuesta mucho dinero desarrollar transistores, pero a la larga es mucho menos costoso producir y mantener los transistores que los tubos de vacío.

C. Si bien los transistores son livianos, durables y baratos, tiene sentido seguir usando tubos de vacío porque eso es lo que se usaba antes.

D. Si bien los tubos de vacío se rompen con facilidad y son difíciles de mantener, tiene sentido seguir usándolos para mantener alto el precio de la electrónica."

Updated Text: "[title] Investiga la administración de los recursos y la pobreza

Los recursos naturales son fundamentales para el sustento de cientos de millones de personas, incluidas muchas que viven en la pobreza. Por ejemplo, hay personas que pescan para comer y también venden el pescado para mantener a su familia. Gran parte de quienes utilizan los recursos naturales de este modo no tienen otras opciones para subsistir. Por ello, los recursos naturales son un factor importante para reducir la pobreza en el mundo.

[fish photo]

Realiza una investigación

Con un grupo, investiga una solución reciente para reducir la pobreza mediante la administración de los recursos.

Mientras investigas, piensa en las siguientes preguntas:

- ¿Cómo usan las personas los recursos naturales para ganarse el sustento?
- ¿Cómo se relaciona la pobreza con los recursos naturales y la administración de esos recursos?
- ¿Qué estrategias de administración de los recursos pueden ayudar a reducir la pobreza?

Haz un cartel que incluya la solución que investigaste y las notas sobre la reducción de la pobreza. Cuelguen los carteles de la clase juntos y hagan un recorrido para explorar otras soluciones para reducir la pobreza mediante la administración de los recursos.

[Sugerencia] Realizar una investigación

Probablemente uses Internet para buscar gran parte de la información, y esta información debe ser confiable. Además de enumerar tus fuentes, ten en cuenta lo siguiente a medida que encuentres información para esta actividad.

- ¿La fuente es confiable? Para evaluar la credibilidad, busca autores expertos en su campo, analiza el propósito del texto e intenta usar fuentes lo más recientes posible. Además, busca en sitios web tradicionalmente más confiables, como los que terminan en .gov, .edu u .org.
- ¿Los datos son comprobables? Es decir, ¿puedes hallar los mismos datos en varias fuentes confiables?
- ¿Las opiniones son de expertos en el tema?"

Updated Text: Si los estudiantes no identifican esta respuesta como correcta, tal vez necesiten repasar cómo se pueden tomar decisiones informadas mediante la evaluación de evidencias provenientes de múltiples fuentes apropiadas y la evaluación de los métodos utilizados.

A. Esto es incorrecto porque es probable que un folleto publicitario incluya información sesgada, o parcial, sobre los productos que figuran en él.

B. Esto es incorrecto porque una encuesta basada en las respuestas de las personas que viven cerca de la fábrica probablemente incluirá opiniones sesgadas, o parciales.

\*C. Esto es correcto porque un estudio científico es una fuente apropiada de información que puede servir para evaluar los métodos utilizados en un estudio.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

\*D. Esto es correcto porque se puede utilizar un estudio de métodos de muestreo de aire de otras fábricas para evaluar los métodos utilizados en un estudio.

Updated Text: "[title] Research Resource Management and Poverty

Natural resources are critical to the livelihoods of hundreds of millions of people, including many people living in poverty. For example, people may catch fish to eat and to sell to provide for their families. Many people who rely on natural resources in this way may not have other options for supporting themselves. This makes natural resources an important factor in reducing poverty around the world.

[fish photo]

Conduct Research

Working with a group, research to learn about a recent solution for reducing poverty through resource management. As you research, think about the following questions:

- How do people use natural resources for their livelihoods?
- How is poverty related to natural resources and the management of those resources?
- What resource management strategies can help reduce poverty?

Incorporate your researched solution and notes about reducing poverty into a poster. Hang your class posters together and do a gallery walk to explore other solutions for reducing poverty through resource management.

[Tip] Conduct Research

You will likely be using the Internet for much of your information and that information must be reliable. In addition to listing your sources, consider the following as you find information for this activity.

- Is the source credible? To assess credibility, look for authors who are experts in their field, evaluate the purpose of the text, and try to use sources that are as recent as possible. Also try to look on websites that are traditionally more reliable, such as those that end in .gov, .edu, or .org.
- Are the facts verifiable? That is, can you find the same facts in multiple credible sources?
- Are the opinions from an expert or experts on the topic?"

Original Text: New Content

Updated Text: All organisms are systems that need energy to do things. Humans and other animals get energy from food. When you eat, the energy contained in the food as chemical energy enters your digestive system. Once there, it undergoes chemical changes just like those described in TEKS Lesson 6.6.E on Chemical Changes. One change the chemical energy in food can undergo is to be transformed to other forms of chemical energy such as blood sugar that can be used by your other body systems. Whether it's the movement of your legs, the pumping of your heart, or the push of air from your lungs that makes a sound, all the energy for your body systems comes from the food you have eaten. The nervous system transforms chemical energy into electrical energy to function. Human bodies also transform chemical

energy into thermal energy that helps maintain a constant warm body temperature. This thermal energy eventually transfers to the surrounding environment. Your digestive system absorbs nutrients from the matter in food to be used by the different systems within the body, and any matter that cannot be used is passed out as waste.

Original Text: New Content

Updated Text: Photosynthesis within the plant system also involves the conservation of matter. Matter is conserved in this system because the type and number of atoms in the products and reactants of photosynthesis are the same. Reactants are the inputs of, or what goes into, a chemical reaction. Products are the outputs of, or what is produced from, a chemical reaction. The elements involved in photosynthesis are carbon (C), oxygen (O), and hydrogen (H). These elements combine in different ways to form carbon dioxide (CO<sub>2</sub>), water (H<sub>2</sub>O), sugar (C<sub>6</sub>H<sub>12</sub>O<sub>6</sub>), and oxygen (O<sub>2</sub>). Here are three different ways to describe photosynthesis. • Plants use light energy to convert carbon dioxide and water to sugar and oxygen. • carbon dioxide + water [arrow with "light energy" label over the arrow] sugar + oxygen • 6CO<sub>2</sub> + 6H<sub>2</sub>O [arrow with "light energy" label over the arrow] C<sub>6</sub>H<sub>12</sub>O<sub>6</sub> + 6 O<sub>2</sub> EXPLAIN: What must be true for matter to be conserved in the plant system during photosynthesis? Select all that apply. A. The mass of light energy used in the process must equal the mass of carbon dioxide, water, sugar, and oxygen produced. B. The mass of carbon dioxide and water used in the process must equal the mass of sugar and oxygen produced. [correct answer] C. The number of hydrogen atoms in the reactants must equal the number of hydrogen atoms in the products. [correct answer] D. The mass of carbon in the reactants must equal the mass of carbon in the products. [correct answer] E. The products of photosynthesis must be the same as the reactants.

Original Text: New Content

Updated Text: The first digital computer in the mid-1940s used 3,000 vacuum tubes for its processor. Vacuum tubes were fragile, prone to failure, and hard to maintain. It required a lot of investment to develop a different approach for vacuum tubes— the transistor. Within a few years later transistors replaced vacuum tubes in the processor. Transistors are small, light, and once the initial development cost has been invested, transistors can be mass-produced relatively inexpensively. Which of the following describes the cost-benefit analysis for developing transistors?

A. It cost a lot of money to develop transistors, and so it did not make much sense to produce them since vacuum tubes are already available.

[correct answer] B. It cost a lot of money to develop transistors, but over the long run they are much less expensive to produce and maintain than vacuum tubes.

C. Even though transistors are light, durable, and inexpensive, it makes sense to keep using vacuum tubes because that is

# Proclamation 2024: Report of New Content

Updated Text: "[title] Research Resource Management and Poverty

Natural resources are critical to the livelihoods of hundreds of millions of people, including many people living in poverty. For example, people may catch fish to eat and to sell to provide for their families. Many people who rely on natural resources in this way may not have other options for supporting themselves. This makes natural resources an important factor in reducing poverty around the world.

[fish photo]

### Conduct Research

Working with a group, research to learn about a recent solution for reducing poverty through resource management. As you research, think about the following questions:

- How do people use natural resources for their livelihoods?
- How is poverty related to natural resources and the management of those resources?
- What resource management strategies can help reduce poverty?

Incorporate your researched solution and notes about reducing poverty into a poster. Hang your class posters together and do a gallery walk to explore other solutions for reducing poverty through resource management.

### [Tip] Conduct Research

You will likely be using the Internet for much of your information and that information must be reliable. In addition to listing your sources, consider the following as you find information for this activity.

- Is the source credible? To assess credibility, look for authors who are experts in their field, evaluate the purpose of the text, and try to use sources that are as recent as possible. Also try to look on websites that are traditionally more reliable, such as those that end in .gov, .edu, or .org.
- Are the facts verifiable? That is, can you find the same facts in multiple credible sources?
- Are the opinions from an expert or experts on the topic?"

Original Text: New Content

Updated Text: The first digital computer in the mid-1940s used 3,000 vacuum tubes for its processor. Vacuum tubes were fragile, prone to failure, and hard to maintain. It required a lot of investment to develop a different approach for vacuum tubes— the transistor. Within a few years later transistors replaced vacuum tubes in the processor. Transistors are small, light, and once the initial development cost has been invested, transistors can be mass-produced relatively inexpensively. Which of the following describes the cost-benefit analysis for developing transistors?

- A. It cost a lot of money to develop transistors, and so it did not make much sense to produce them since vacuum tubes are already available.
- [correct answer] B. It cost a lot of money to develop transistors, but over the long run they are much less expensive to produce and maintain than vacuum tubes.
- C. Even though transistors are light, durable, and inexpensive, it makes sense to keep using vacuum tubes because that is what has been used before.
- D. Even though vacuum tubes are easy to break and hard to maintain, it makes sense to keep using them to keep the price of electronics high.

Updated Text: All organisms are systems that need energy to do things. Humans and other animals get energy from food. When you eat, the energy contained in the food as chemical energy enters your digestive system. Once there, it undergoes chemical changes just like those described in TEKS Lesson 6.6.E on Chemical Changes. One change the chemical energy in food can undergo is to be transformed to other forms of chemical energy such as blood sugar that can be used by your other body systems. Whether it's the movement of your legs, the pumping of your heart, or the push of air from your lungs that makes a sound, all the energy for your body systems comes from the food you have eaten. The nervous system transforms chemical energy into electrical energy to function. Human bodies also transform chemical energy into thermal energy that helps maintain a constant warm body temperature. This thermal energy eventually transfers to the surrounding environment. Your digestive system absorbs nutrients from the matter in food to be used by the different systems within the body, and any matter that cannot be used is passed out as waste.

Original Text: New Content

Updated Text: Photosynthesis within the plant system also involves the conservation of matter. Matter is conserved in this system because the type and number of atoms in the products and reactants of photosynthesis are the same. Products are the inputs of, or what goes into, a chemical reaction. Reactants are the outputs of, or what is produced from, a chemical reaction. The elements involved in photosynthesis are carbon (C), oxygen (O), and hydrogen (H). These elements combine in different ways to form carbon dioxide (CO<sub>2</sub>), water (H<sub>2</sub>O), sugar (C<sub>6</sub>H<sub>12</sub>O<sub>6</sub>), and oxygen (O<sub>2</sub>).

Here are three different ways to describe photosynthesis.

- Plants use light energy to convert carbon dioxide and water to sugar and oxygen.
- carbon dioxide + water [arrow with "light energy" label over the arrow] sugar + oxygen
- 6CO<sub>2</sub> + 6H<sub>2</sub>O [arrow with "light energy" label over the arrow] C<sub>6</sub>H<sub>12</sub>O<sub>6</sub> + 6 O<sub>2</sub>

EXPLAIN: What must be true for matter to be conserved in the plant system during photosynthesis? Select all that apply.

- A. The mass of light energy used in the process must equal the mass of carbon dioxide, water, sugar, and oxygen produced.
- B. The mass of carbon dioxide and water used in the process must equal the mass of sugar and oxygen produced. [correct answer]
- C. The number of hydrogen atoms in the reactants must equal the number of hydrogen atoms in the products. [correct answer]
- D. The mass of carbon in the reactants must equal the mass of carbon in the products. [correct answer]
- E. The products of photosynthesis must be the same as the reactants.

Current Page Number(s): TEKS Lesson 7.8.B, Evaluate, Screen 3

Location: Item 2

Original Text: New Content

Updated Text: "2. Imagine that the purpose of this experimental heat exchanger is to raise the output temperature of Liquid B as high as possible while keeping the input temperature of Liquid A as low as possible. Using your understanding of the principles of heat transfer, which of the following design solutions do you propose would be important to add to this model?"

- A. Add insulation to reduce the heat that Liquid A transfers to outside the heat exchanger.
- B. Add insulation to increase the heat that Liquid A transfers to outside the heat exchanger.
- C. Remove insulation to reduce the heat that Liquid A transfers to outside the heat exchanger.
- D. Remove insulation to increase the heat that Liquid A transfers to outside the heat exchanger."

Location: Item 32, prompt and answer choices

Original Text: New Content

Updated Text: "The atomic theory is the theory that all matter is made up of atoms. A chemical equation is a model that shows how atoms rearrange in a chemical reaction. The production of lime (calcium oxide, CaO), which is used as an ingredient in concrete, involves heating calcium carbonate (CaCO<sub>3</sub>) to decompose it into calcium oxide and carbon dioxide. A model of the decomposition reaction is shown in the chemical equation below.

An engineer wants to produce 5,000 kg of lime to make a batch of concrete. Use the chemical equation to help propose a solution for how much calcium carbonate would the engineer need to begin with to produce 5,000 kg of lime.

A. 2,800 kg

B. 3,929 kg

C. 7,800 kg

D. 8,929 kg"

Current Page Number(s): Variation and Adaptation (TEKS 8.13.C) Quiz A, p. 3

Location: new Item 7, prompt and answer choices

Original Text: New Content

Updated Text: "In studies conducted on one of the Galápagos Islands, scientists observed the effect of natural events on the beak shape of a population of medium ground finches. These studies involved measuring the size and shape of the beaks of hundreds of finches on the island.

Medium ground finches usually eat small, soft seeds that are plentiful on the island. During a drought in 1977, plants on the island did not produce many seeds. The soft seeds were quickly eaten up. Finches that could eat larger, harder seeds instead of small, soft seeds were able to survive. Finches that could not eat the larger seeds died of starvation.

Researchers compared measurements of average beak size before and after the drought.

Proclamation 2024: Report of New Content (08/25/2023)

Page 1264 of 1830

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

[TABLE, title] "Average Beak Size in Medium Ground Finches"

[Column 2 head] "1977 (before drought)"

[Column 3 head] "1978 (after drought)"

[Row 1] "beak length (mm)" "10.68" "11.07"

[Row 2] "beak depth (mm)" "9.42" "9.96"

[Row 3] "beak width (mm)" "8.68" "9.01"

Based on these data, and the theory that adaptation to environmental factors results in change in a population over time, propose a solution for confirming that the change in beak size was due to a change in the type of seeds available. Move ONE correct answer to each box.

Measure the beak sizes of the population [BLANK] a period of wet weather that causes [BLANK] small, soft seeds to be available. If the increase in beak size after the drought was due to the type of seeds available, then a [BLANK] beak size should be better adapted to the wet conditions with soft seeds, and the average beak size in the population should [BLANK].

- A. after
- B. more
- C. fewer
- D. larger
- E. before
- F. smaller
- G. increase
- H. decrease"

Original Text: New Content

Updated Text: "If students miss this item, they may need to review how variations in traits exist in populations and that certain traits may be selected for. A. Box 1: After is correct for the first box. Measure the beak sized after a period of wet weather. B. Box 2: More is correct for the second box. Wet weather causes more small, soft seeds to be available. C. Fewer is not used. D. Larger is not used. E. Before is not used. F. Box 3: Smaller is correct for the third box. A smaller beak size should be better adapted to the wet conditions. G. Increase is not used. H. Box 4: Decrease is correct for the fourth box. The average beak size in the population should decrease. Correct answer: Measure the beak sizes of the population [after] a period of wet weather that causes [more] small, soft seeds to be available. If the increase in beak size after the drought was due to the type of seeds available, then a [smaller] beak size should be better adapted to the wet conditions with soft seeds, and the average beak size in the population should [decrease]."

Location: Re-review: New content added. Please include the following as evidence added to the Course Unit Storylines and Teacher Guides. Information from the following page is added as a resource for teachers as a guide in using the instructional model to accommodate multilingual learners. The following is a direct quote from the text to be added, "OpenSciEd Instructional Model:

The instructional routines that make up the OpenSciEd Instructional Model provide many scaffolded opportunities for multilingual students to practice talking in partners, small groups, and then finally as a whole class.

Activities include options for students to express their ideas in many ways, with an emphasis on students using both linguistic (e.g., talking and writing) and non-linguistic (e.g., drawing, graphing) resources to share their thinking."

<https://www.openscienced.org/multilingual-learners/>

[https://docs.google.com/document/d/11p8XkqNpTseXO274Dg7JaDYDG7FgSV2tEK2kGn\\_38j8/edit#bookmark=id.its599174opd](https://docs.google.com/document/d/11p8XkqNpTseXO274Dg7JaDYDG7FgSV2tEK2kGn_38j8/edit#bookmark=id.its599174opd)

Since this evidence shows teacher guidance for linguistic accommodations, the score should be changed from PM to M.

Location: Re-review: New content added. Please include the following as evidence added to the 6th grade science course Unit Storylines and Teacher Guides Activities Section. Home communication letters found at the end of the unit overview are provided for teachers as a resource to share with caregivers for how they can help student learning. The following is a direct quote from the resource, "Helping your child make sense of their learning:

There is no pre-teaching vocabulary because words often have multiple meanings, and are often easier to remember once students have some experience with it; therefore, ask your child to recall evidence or experiences to help elaborate on what their ideas and explanations are.

Encourage your child to connect how their models or drawings help explain their ideas about the one-way mirror phenomenon.

Ask your child how different structures or parts interact with other structures within their models.

Ask your child what question(s) they are working on currently, and how the class has made progress so far.

If your child sees the phenomenon or a similar phenomenon outside of school, encourage your child to record it and share with the class, or explain to you what they think is happening."

Please see the following example of the Unit 6.1 Overview Materials with a home communication letter at the end.

<https://docs.google.com/document/d/1XpCnIUFmt3gij8jzWX57PGYFOikGPcpxLHUauj2UN0s/edit>

Since this evidence shows information for each unit that teachers can use to communicate with caregivers, the score should be changed from PM to M.

Location: Re-review: New content added. Please include the following as evidence added to the Course Unit Storylines and Teacher Guides activities. An activity can be assigned by teachers to share with parents and caregivers the technology that will be utilized throughout the course. The information includes a link to a video library for access to videos in each unit of the course.

<https://www.youtube.com/opensciedaccount>

Parents can view a library of the simulations that will be used in each unit as well.

<https://www.openscied.org/phenomena-simulation-library-middle-school/>

The following is a direct quote of text included in the caregiver technology information page, " "Students will interact with multiple forms of media throughout the course. Simulations and data visualization tools will enable students to create and refine models of their ideas of key scientific phenomena. Embedded engineering practices in units focused on problem-solving and technology emphasize that there is not always one right answer. When having conversations about science, you can encourage your child's curiosity through talking about their own noticings and wonderings from the technology that they utilize in class. When supporting your students' use of technology, hold off on providing answers right away for your child; we want students to make progress on their own questions and to think of ways to make sense of what's around them."

[https://docs.google.com/document/d/11p8XkqNpTseXO274Dg7JaDYDG7FgSV2tEK2kGn\\_38j8/edit#bookmark=id.9nsrlo629z8u](https://docs.google.com/document/d/11p8XkqNpTseXO274Dg7JaDYDG7FgSV2tEK2kGn_38j8/edit#bookmark=id.9nsrlo629z8u)

Since this evidence shows materials provided to parents and caregivers to support student engagement with the technology and online aspects of the curriculum, the score should be changed from N to Y.

Location: OMISSION: Please include the following as evidence. Throughout the course, "connect to previous unit ideas" are incorporated into lessons to spiral content and support mastery and retention. For example, 6.3.01 Connect to Previous Unit Ideas begins with, "In our previous Cup Design Unit, we developed some useful ways to represent what was happening to the matter and energy in a system. Let's recall what those were, so we can figure out if they could help us explain what caused some of the changes happening outside in the videos' precipitation events. Discuss these ideas with a partner:

How did we represent the particles that make up different states of matter in a gas, a liquid, and a solid?

How did we represent the different ways that energy can be transferred into and out of a system like a cup with liquid in it?"

Since the evidence shows spiraling of content throughout the course, the score should be changed from DNM to M.

Updated Text: Add question #3:

Connecting to Current Research:

Read the following passage. Look for connections between current research and Dalton's research.

A long time ago, Earth looked very different and didn't have any life. It was covered in water, and scientists think that life started in this watery environment. They've been trying to figure out how the building blocks of life, like proteins and DNA, first appeared. Now, a group of scientists at Scripps Research found some new chemical reactions that could explain how this happened.

These reactions use simple ingredients like cyanide, which was around on early Earth, along with other substances like ammonia and carbon dioxide. These reactions help create amino acids and nucleic acids. Amino acids are like the building blocks of proteins, which are important for living things, and nucleic acids are like the building blocks of DNA, which carries genetic information.

The scientists believe that these reactions are what might have happened on Earth a long time ago. This discovery not only helps us understand how life might have started, but it's also useful for making certain things in industries.

Before this, scientists had some ideas about different reactions, but the new ones are different because they use ingredients that were probably available on early Earth. The scientists found out that if they mix cyanide, ammonia, and carbon dioxide with something called keto acid, amino acids start forming. This is important because amino acids are crucial for life as we know it.

How does this research relate to Dalton's research?

How do these newly discovered reactions demonstrate particles breaking apart or joining together to form different types of particles?

Original Text: 2. Change the units on your scale to **ounces** and tare your scale.

3. Have one group member hold the ruler on the table behind the scale, NOT ON THE SCALE - THIS WILL AFFECT YOUR MEASUREMENTS. Get eye-level with the top of the magnet taped to the scale. Record the number from your ruler that is in line with the top of the magnet. This is your starting reference to help you figure out when the magnets are 1-6 cm apart.

Updated Text: 2. Change the units on your scale to **grams** and tare your scale.

Location: Re-review: New content added. Please include the following as evidence added to the 8th grade science course. OSE strategies for supporting emerging multilingual learners sensemaking will be provided to teachers and added to the Course Unit Storylines and Teacher guides in the 6th grade science course. It is a resource from OSE that explains a variety of specific instructional strategies that teachers will utilize throughout the 6th grade curriculum to purpose scaffold the content for multilingual learners.

<https://www.opensci.ed.org/wp-content/uploads/2020/06/OpenSciEd-Strategies-for-Supporting-Emerging-Multilingual-Learners-May-2020-3.pdf>

OSE also provides a video for teachers on Supporting emerging multilingual learners. This video will be added to Unit Storylines and Teacher Guides as a resource for teachers to accommodate multilingual learners.

Proclamation 2024: Report of New Content (08/25/2023)

Location: Re-review: New content added. Please include the following as evidence added to the 8th grade science course Unit Storylines and Teacher Guides Activities Section. Home communication letters found at the end of the unit overview are provided for teachers as a resource to share with caregivers for how they can help student learning. The following is a direct quote from the resource, "Helping your child make sense of their learning: There is no pre-teaching vocabulary because words often have multiple meanings, and are often easier to remember once students have some experience with it; therefore, ask your child to recall evidence or experiences to help elaborate on what their ideas and explanations are. Encourage your child to connect how their models or drawings help explain their ideas about the one-way mirror phenomenon. Ask your child how different structures or parts interact with other structures within their models. Ask your child what question(s) they are working on currently, and how the class has made progress so far. If your child sees the phenomenon or a similar phenomenon outside of school, encourage your child to record it and share with the class, or explain to you what they think is happening." Please see the following example of the Unit 8.1 Overview Materials with a home communication letter at the end.

videos in each unit of the course.

<https://www.youtube.com/opensciaccount>

Parents can view a library of the simulations that will be used in each unit as well.

<https://www.opensci.org/phenomena-simulation-library-middle-school/>

The following is a direct quote of text included in the caregiver technology information page, "Students will interact with multiple forms of media throughout the course. Simulations and data visualization tools will enable students to create and refine models of their ideas of key scientific phenomena. Embedded engineering practices in units focused on problem-solving and technology emphasize that there is not always one right answer. When having conversations about science, you can encourage your child's curiosity through talking about their own noticings and wonderings from the technology that they utilize in class. When supporting your students' use of technology, hold off on providing answers right away for your child; we want students to make progress on their own questions and to think of ways to make sense of what's around them."

[https://docs.google.com/document/d/11p8XkqNpTseXO274Dg7JaDYDG7FgSV2tEK2kGn\\_38j8/edit#bookmark=id.9nsrlo629z8u](https://docs.google.com/document/d/11p8XkqNpTseXO274Dg7JaDYDG7FgSV2tEK2kGn_38j8/edit#bookmark=id.9nsrlo629z8u)

Since this evidence shows materials provided to parents and caregivers to support student engagement with the technology and online aspects of the curriculum, the score should be changed from N to Y.

Original Text: Measure in centimeters, the height of the center point of your object above the table. Record this in column B of row 1 and of row 2 of the data table on the *Deformation Results* handout.

Correct Answer

**E**

One member of the group should place a spring scale against the center point of the object and push down with 1 N force and hold it at that level. Another group member should measure in centimeters, the height of the beam with the force applied to it. Have a third member record that height in row 2, column C and calculate the deformation in column D of the data table. In column A of row 2, write the force used, in this case "1".

Updated Text: Measure in centimeters, **using a ruler,** the height of the center point of your object above the table. Record this in column B of row 1 and of row 2 of the data table on the *Deformation Results* handout.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Location: Omission: Evolution Connection, Career Connection, Visual Connection, Everyday Connection, and Scientific Method Connection sections are found throughout the materials. These sections provide direction and linked resources for teachers to facilitate student-made connections across core concepts and scientific and engineering practices. For example:

Chapter 45.3 Environmental Limits to Population Growth

"EVOLUTION CONNECTION- Energy Budgets, Reproductive Costs, and Sexual Selection in *Drosophila*"

"VISUAL CONNECTION- Figure 45.10 (a) Yeast grown in ideal conditions in a test tube show a classical S-shaped logistic growth curve, whereas (b) a natural population of seals shows real-world fluctuation."

Chapter 44.4 Aquatic Biomes

"EVOLUTION CONNECTION- Global Decline of Coral Reefs"

Indicator 8.1.2 should be changed to "met".

Link to Updated Content:

Location: Omission: English Language Learner Support sections are found throughout the text, providing differentiation for a diverse classroom. For example:

Chapter 1.1 The Science of Biology:

"ENGLISH LANGUAGE LEARNER SUPPORT

At the beginning of each chapter, have students read the Introduction, Chapter Outline, Section Goals, and preview the various headings and graphics.

As a class, with a partner or group, or individually, have students complete a K-W-L Chart for the topics covered in the upcoming section. Then, as they read the section, they can complete their "L" sections."

"ENGLISH LANGUAGE LEARNER SUPPORT

Students will work with the scientific method throughout this text. At various steps during the process, have individual students describe their work to the class. Provide sentence frames where needed. For example:

"I observe that..."

"My hypothesis is..."

"I predict that..."

This evidence demonstrates that the materials guide instruction and differentiation for a diverse classroom. Indicator 8.1.2 should be changed to "met".

Updated Text: Make question 7 multipart or add an additional question:

Male elk grow large, branched antlers that require a significant amount of energy and nutrients to develop. These antlers can be cumbersome, making it more difficult for elk to maneuver through dense vegetation and escape predators.

However, during the mating season, male elk use their antlers to compete with other males for access to females. The size and quality of the antlers can making them attractive to females.

Analyze and describe how elk antlers are an example of the handicap principle.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Location: Chapter 3.2 Carbohydrates:

"ENGLISH LANGUAGE LEARNER SUPPORT

Set aside time for one-on-one conferences and invite language learners to schedule conferences. Encourage language learners to ask for information that will help them to comprehend complex concepts. Beginning ELLs may use limited high-frequency vocabulary, such as "I do not understand" or "Can you explain" whereas more advanced language learners may be more comfortable using abstract and content based vocabulary. In either case, work with students to figure out where they are stuck and how you can help. Use simple language and employ visual aids and/or gestures where appropriate."

This evidence demonstrates that the materials guide instruction and differentiation for a diverse classroom. Indicator 8.1.2 should be changed to "met".

Current Page Number(s): online

Location: Omission:

Each chapter in every unit starts with an "Introduction" that introduces an "Anchoring Phenomenon" that is used throughout the chapter. For example, Chapter 3 Introduction explains how "swimming pools require regular additions of various chemical compounds in carefully measured amounts". Each chapter begins with an "Introduction" followed by appropriate content in subchapters presented in increasing complexity for deeper understanding. Additional sections include "Key Terms, Summary, Key Equations, and various Exercises to check for understanding, mastery and application to real life.

Since this evidence shows how "Anchoring phenomena" is embedded into each chapter introduction, indicator 2.2.1 should be changed to "partially met".

Location: OMISSION: Please use the following as evidence found in Chapter 3 > Section 3.3. Students prior knowledge of dilutions is addressed by providing an example of iced tea becoming diluted when ice cubes melt.

"Dilution is the process whereby the concentration of a solution is lessened by the addition of solvent. For example, a glass of iced tea becomes increasingly diluted as the ice melts. The water from the melting ice increases the volume of the solvent (water) and the overall volume of the solution (iced tea), thereby reducing the relative concentrations of the solutes that give the beverage its taste (Figure 3.16)."

Students then apply their understanding of the chemistry concept of dilutions to a virtual lab investigation.

"Use the simulation (<http://openstax.org/l/16Phetsolvents>) to explore the relations between solute amount, solution volume, and concentration and to confirm the dilution equation."

Since the evidence above shows an opportunity for students to use their prior knowledge and apply it to phenomena and engineering situations, the score should be changed from DNM to M.

The materials use the "Introductory Paragraph" of the Chapters to leverage students' prior knowledge in order for them to relate the topic at hand. For example, Chapter 4.1 says, "An earlier chapter of this text introduced the use of element symbols to represent individual atoms. When atoms gain or lose electrons to yield ions, or combine with other atoms to form molecules, their symbols are modified or combined to generate chemical formulas that appropriately represent these species. Extending this symbolism to represent both the identities and the relative quantities of substances undergoing a chemical (or physical) change involves writing and balancing a chemical equation."

Since this evidence shows how the Introduction prompts students to think about prior knowledge, indicator 2.2.2 should be changed to "partially met"

Location: Omission: The materials contain English Language Learner Support sections throughout, which provide scaffolding activities. For example:

Chapter 4.2 Classifying Chemical Reactions

"Periodically assign simple extended speaking assignments to language learners, asking them to relate something they have learned to their day-to-day life or a personal experience. Give students a list of topics to choose from based on the current chapter being studied. Have language learners present to a small audience consisting of either their fellow ELL classmates or a group of classmates that includes native speakers.

Guide beginning ELLS to select topics that lend themselves to their limited vocabulary. Beginning language learners will rely on a bank of high-frequency words to communicate their ideas. However, as they participate in classroom activities and listen to their peers' speaking assignments, beginning learners will naturally acquire and begin to incorporate abstract and content-based vocabulary."

Indicator 8.2.1 should be changed to "met"

current chapter being studied. Have language learners present to a small audience consisting of either their fellow ELL classmates or a group of classmates that includes native speakers.

Guide beginning ELLs to select topics that lend themselves to their limited vocabulary. Beginning language learners will rely on a bank of high-frequency words to communicate their ideas. However, as they participate in classroom activities and listen to their peers' speaking assignments, beginning learners will naturally acquire and begin to incorporate abstract and content-based vocabulary."

Indicator 8.2.1 should be changed to "met"

Updated Text: Omission: The materials contain English Language Learner Support sections throughout, which provide scaffolding activities. For example:

Chapter 4.2 Classifying Chemical Reactions

"Periodically assign simple extended speaking assignments to language learners, asking them to relate something they have learned to their day-to-day life or a personal experience. Give students a list of topics to choose from based on the current chapter being studied. Have language learners present to a small audience consisting of either their fellow ELL classmates or a group of classmates that includes native speakers.

Guide beginning ELLs to select topics that lend themselves to their limited vocabulary. Beginning language learners will rely on a bank of high-frequency words to communicate their ideas. However, as they participate in classroom activities and listen to their peers' speaking assignments, beginning learners will naturally acquire and begin to incorporate abstract and content-based vocabulary."

Indicator 8.2.1 should be changed to "met"

Location: OMISSION (continued): Please include the following as evidence of a virtual lab investigation that provides digital versions of all equipment and supplies needed during the instructional activity. For example, in Chapter 10 > Exercises > Section 10.1, students are provided a link to a virtual simulation and the following questions, "Open the PhET States of Matter Simulation (<http://openstax.org/l/16phetvisual>) to answer the following questions:

(a) Select the Solid, Liquid, Gas tab. Explore by selecting different substances, heating and cooling the systems, and changing the state. What similarities do you notice between the four substances for each phase (solid, liquid, gas)? What differences do you notice?

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

(b) For each substance, select each of the states and record the given temperatures. How do the given temperatures for each state correlate with the strengths of their intermolecular attractions? Explain.

(c) Select the Interaction Potential tab, and use the default neon atoms. Move the Ne atom on the right and observe how the potential energy changes. Select the Total Force button, and move the Ne atom as before. When is the total force on each atom attractive and large enough to matter? Then select the Component Forces button, and move the Ne atom. When do the attractive (van der Waals) and repulsive (electron overlap) forces balance? How does this relate to the potential energy versus the distance between atoms graph? Explain."

Since the evidence shows digital investigations that do not require safety precautions like traditional labs, the score should be changed from DNM to PM.

Location: OMISSION: Please include the following as evidence, found in the Chemistry course Introduction. "Pedagogical foundation and features

Throughout Chemistry 2e, you will find features that draw the students into scientific inquiry by taking selected topics a step further. Students and educators alike will appreciate discussions in these feature boxes.

- Chemistry in Everyday Life ties chemistry concepts to everyday issues and real-world applications of science that students encounter in their lives. Topics include cell phones, solar thermal energy power plants, plastics recycling, and measuring blood pressure.
- How Sciences Interconnect feature boxes discuss chemistry in context of its interconnectedness with other scientific disciplines. Topics include neurotransmitters, greenhouse gases and climate change, and proteins and enzymes.
- Portrait of a Chemist presents a short bio and an introduction to the work of prominent figures from history and present day so that students can see the "faces" of contributors in this field as well as science in action."

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

"Interactives that engage

Chemistry 2e incorporates links to relevant interactive exercises and animations that help bring topics to life through our Link to Learning feature. Examples include:

- PhET simulations
- IUPAC data and interactives
- TED Talks"

Students use application skills throughout each chapter of the course to conduct virtual lab investigations and make real-world connections to the chemistry content.

Since this evidence shows additional content that supports students in constructing, building, and developing knowledge, indicator 2.2.1 should be changed to "partially met".

Location: Please include the following as evidence found in the Physics course Preface. The preface includes a coverage, scope and pacing guide for the year-long physics course. The following is a direct quote, "Physics covers the scope and sequence requirements of a typical one-year physics course. The text provides comprehensive coverage of physical concepts, quantitative examples and skills, and interesting applications. High School Physics has been designed to meet and exceed the requirements of the relevant Texas Essential Knowledge and Skills (TEKS), while allowing significant flexibility for instructors." The preface also includes required time for each chapter, example, "Chapter 1: What Is Physics? (7 days)

Chapter 2: Motion in One Dimension. (9 days)

Chapter 3: Acceleration. (5 days)

Chapter 4: Forces and Newton's Laws of Motion. (9 days)...", etc.

Since this evidence shows scheduling considerations and time requirements, the score should be changed from did not meet to met

Original Text: New Content

Updated Text: Plan A large part of an astronaut's time in space is spent performing investigations. An astronaut wants to investigate the best methods for growing a productive garden on the International Space Station. Plan an experiment to help the astronaut answer the question: How does fertilizer affect the growth of plants in space?

Plants grown without fertilizer will act as the control group. Based on your observations of how plants grow with and without fertilizer on Earth, form a hypothesis. The hypothesis should identify the independent variable and state why you think changing the variable will alter the effectiveness of the fertilizer. Write a procedure that will test the hypothesis. Remember to identify the dependent variable, include ways to collect and display data, and indicate how you will compare results.

Answers must include a hypothesis that predicts the results of the experiment, a procedure that correctly identifies the independent variable (fertilizer), dependent variable (plant growth), control group (no fertilizer), and experimental group (fertilizer). The procedure must include a plan for testing the hypothesis, collecting and displaying data, and comparing the results.

Location: Making Connections, paragraphs 1 and 2

Original Text: New Content

Updated Text: Review with students how plants grow with and without fertilizer to answer the following question.

Plan Help students recall the steps required for planning an experimental investigation. Students may need a short review on how to come up with a hypothesis, how to identify the independent and dependent variables, and different methods of collecting and displaying data.

**Component: McGraw Hill Texas Science Grade 7 Digital Teacher Edition**

ISBN: 9781265566210

Current Page Number(s): 181

Location: Chapter TEKS Review, question 3

Original Text: New Content

Updated Text: Answers must describe the physical properties, locations, and movements of two of the objects from the provided list. For example, an asteroid is a small, rocky object that doesn't rotate on an axis, orbits the Sun, and is composed of chunks of rock and ice. A meteor is a meteoroid that has entered Earth's atmosphere and is made up of rock and metal. A comet is a small, rocky, icy object that orbits the Sun in a highly elliptical orbit. The Kuiper Belt is a band of small, celestial bodies beyond the orbit of Neptune. The objects moving in the Kuiper Belt include comets, are not evenly distributed, and differ in shapes and sizes. The Oort Cloud is a spherical shell surrounding the solar system. It is composed of celestial bodies that travel in many different directions and is thought to be the source of icy objects that become comets.

Original Text: New Content

Updated Text: Automotive engineers must understand the concepts of balanced and unbalanced forces to design safe vehicles.

Plan Use scientific practices to plan an experimental investigation that answers the question: How can you protect a passenger in a car crash?

Choose a vehicle to use or build to test its safety. Your vehicle must travel about 2 m with an average speed of at least 0.75 m/s and then stop suddenly. What force will move your vehicle? How will you stop the vehicle? Test your vehicle to be sure it meets the distance and speed requirements.

Make a clay passenger, and place it on your vehicle. Use the force you chose to move the vehicle on the track and stop it. Observe what happens to the passenger. This test will act as the control group. All changes made to your vehicle will be compared to this control run.

Try different ways to protect the passenger.

Based on your observations of what happened to the passenger during the control run, form a hypothesis. The hypothesis should identify the independent variable and state why you think changing the variable will alter the safety of the vehicle. Write a procedure that will test the hypothesis. Remember to identify the dependent variable, include ways to collect and display data, and indicate how you will compare results.

# Proclamation 2024: Report of New Content

Physics to Go

1. Particles can hit an object at a specific location while waves are spread out. When shot toward two slits, particles go through one slit or the other, while waves go through both slits. Waves can diffract and interfere, while particles do not.
2. No, this will not work. As the slit gets thinner, there is greater diffraction and the beam will spread out.
3. Einstein's explanation of the photoelectric effect showed that light can behave as a particle. In particular, the photoelectric effect makes sense only in terms of a collision between an electron and a particle of light.
4. This is a good opportunity for students to apply their understanding to everyday phenomena. The baseball has a defined path. It moves left and it moves right. From its past behavior, you have a good chance of knowing where it will be. The electron in a box is restricted in certain ways. This restricts its energy and the probability of where it will be found. The wavelength of the baseball moving at 30 m/s would be given by  $\lambda = h/mv = (6.6 \times 10^{-34} \text{ J}\cdot\text{s}) / (0.145 \text{ kg})(30 \text{ m/s}) = 1.5 \times 10^{-34} \text{ m}$
5. Using  $KE = E - w$  electron light and substituting in the energy of the photon and the work function gives  $10 \text{ eV} - 42 \text{ eV} = 58 \text{ eV}$

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Here are some examples of how the concepts you studied in this chapter relate to other sciences. ( unable to paste images into this document)

## Waves

**Biology** Nerve cells transmit messages from the brain to the muscles through waves of electrical impulses. These electrical waves are associated with the motion of positive and negative ions into and out of the nerve cells.

**Chemistry** Light waves can transmit energy that is absorbed by molecules. Similarly, molecules can emit energy in the form of light waves.

**Earth Science** Water waves play an important role in shaping land masses. Like all waves, water waves carry energy. This energy can be used to break up rocks, move sand around, and redefine the contours of beaches and inlets.

**Vibrating Strings** Biology Vocal cords are similar to vibrating strings. Since the length remains the same, tightening the vocal cords increases the wave speed in the cords and the frequency of vibration increases.

**Chemistry** Polymers are long-chain molecules found in rubber and plastics that can vibrate like strings. By studying those vibrations, chemists can determine the composition and structure of the polymers.

**Earth Science** Standing waves similar to those set up in vibrating strings can occur in the ground when the soil is saturated with water during an earthquake. This phenomenon increases the destructive power of the earthquake.

## Refraction

**Biology** Cells are somewhat transparent to light. By observing light as it refracts through cells, biologists can learn about cell structure.

**Chemistry** Different combinations of a set of elements, such as FeO, Fe<sub>2</sub>O<sub>3</sub>, and FeO<sub>2</sub>, refract light differently. Chemists can use this refraction pattern to determine the particular elemental combination in a sample.

**Earth Science** The refraction of light passing through Earth's atmosphere during a lunar eclipse allows some light to pass into the shadow of Earth on the Moon. This light, which is predominantly in the red region, gives rise to the "blood moon" phenomenon.

## Lenses

**Biology** Eyes are equipped with variable focal length lenses that allow us to form clear images of objects by adjusting the focus.

**Chemistry** Lenses made of material other than glass allow focusing of images from non-visible spectral lines to assist in compound identification.

**Earth Science** Telescopes have lenses that magnify images of the planets. The gravitational lens effect of distant galaxies helps determine their mass.

## Mirrors and Reflection

**Biology** Tigers and other animals can hunt successfully at night due to a reflective layer of cells inside their eyes. This layer allows light a second chance to interact with the light detecting cells of the eye, improving night vision. Such animals can often be spotted at night due to the reflection of light from their eyes.

**Chemistry** Chemists analyze the structure of organic compounds using infrared spectrophotometers. These instruments use a light source, a series of mirrors, and a light detector to determine the functional groups in a compound. Earth

# Proclamation 2024: Report of New Content

Science We see the Moon because sunlight is reflected by the Moon. Similarly, when astronauts are in space, they see Earth only because it is reflecting sunlight.

## Color

Biology Color plays an important role in nature. Birds and insects may be attracted to a plant by its color, and thus aid in pollination. The colors of some animals can provide camouflage, making it more difficult for predators or prey to spot them, or color can serve as an attraction to mates.

Chemistry Many substances change color as a reaction to chemical environment. Substances used to measure pH change color as a reaction to the pH content of a given solution. Other substances change color depending on their valence state.

Earth Science The color of the minerals in a rock is an important indicator in rock identification. Rocks are scraped across porcelain plates and the streaks that are left are analyzed for their color.

He decided that electrons reside outside of the nucleus, but he was not sure what they were doing. Somehow, he knew, these electrons are attracted to the positive protons within the nucleus.

Updated Text: Pg 695, PDF pg 739 - New additional paragraph after the last paragraph in the right-hand column

Finally, Rutherford discovered that the atom must contain a very dense positive nucleus and through his experimentation, the atom model went through yet another change. He decided that electrons reside outside of the nucleus, but he was not sure what they were doing. Somehow, he knew, these electrons are attracted to the positive protons within the nucleus.

**A hypothesis is defined as a tentative explanation or an educated guess based on some observations. A Theory is defined as a well, substantiated explanation, a logical explanation of an observation. A Law describes how nature will behave, usually a math equation, what really happens in nature.**

**Mufflers help silence sound waves several ways. They help convert sound energy into heat and dissipate the energy that way. Also they use the principles of destructive interference to bounce sound off of baffles to make the sound waves interact in a destructive interference pattern and help mitigate the noise created by the internal combustion engine. Noise-cancelling headphones work by using the interference of sound waves in a destructive manner. A microphone in each earbud picks up all the outside noise and then the interior of the earbud emits the same frequency, but out of phase, with the incoming noise. This use of destructive interference helps cancel out most of the noise.**

**Concerning technology, when 2 waves of the same frequency and phase come together, the result is called constructive interference which can increase the frequency of amplitude of a wave. If two waves interact out of phase with each other, they can cancel out and decrease the frequency or amplitude of a wave. This is known as destructive interference. Two great examples of destructive interference are mufflers on vehicles and noise- cancelling headphones.**

**Mufflers help lower the amplitude of sound coming out of the back of your vehicle. A set of baffles in the muffler are set a certain distance apart so that sound waves in between them bounce off each other out of phase and the amplitude is lessened In noise-cancelling headphones, microphones in the earbuds monitor the sound around you as you are listening to music. These microphones listen to the outside noise and specific frequencies and then emit the opposite, out of phase sound, that helps cancel out the sounds when they collide. This reduces the outside noise that you hear so you can hear your music easier.**

Original Text: Checking Up

1. An electron is a subatomic particle of the atom with a negative charge and is located outside of the nucleus.

2. Rutherford was surprised because he was using Thomson's model and he expected the alpha particles to be deflected only when they came near a proton.

3. The nucleus of the atom was known to be very dense and have a positive charge due to the presence of protons. The nucleus was also discovered to contain most of the mass of the atom.

Updated Text: pg 698 PDF pg 742. 2 additional questions were added (4 and 5 ) in the Left-hand column under "Checking Up"

Checking Up

1. An electron is a subatomic particle of the atom with a negative charge and is located outside of the nucleus.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

2. Rutherford was surprised because he was using Thomson's model and he expected the alpha particles to be deflected only when they came near a proton.

3. The nucleus of the atom was known to be very dense and have a positive charge due to the presence of protons. The nucleus was also discovered to contain most of the mass of the atom.

4. **NO, theories never become laws because laws form the body of evidence upon which we base theories** 5. **There could be new or different pieces of evidence or new perspectives to consider that would negate a theory.**

5. **There could be new or different pieces of evidence or new perspectives to consider that would negate a theory.**

Original Text: In this topic, students will learn how a magnet can create a force that cause changes in motion and position of some everyday objects. First, in Experience 1, they will describe and predict how a magnet interacts with different materials. Then, in Experience 2, they will use magnets to investigate how they can push or pull different objects.

Updated Text: In this topic, students will learn how a magnet can create a force that cause changes in motion and position of some everyday objects. First, in Experience 1, they will describe and predict how a magnet interacts with different materials. Then, in Experience 2, they will use magnets to investigate how they can push or pull different objects. As you progress through the topic, connect the activities back to Topic 1, Objects. Students can apply what they learned in Topic 1 about properties of objects and ways to classify objects (TEKS K.6) with how objects interact with various materials in Topic 2.

Original Text: New Content

Updated Text: Dear Students and Caregivers,

In Grade K, students will be introduced to topics in Physical, Earth, and Life science. Students will learn about objects, magnets, motion, light, and shadows. They will explore patterns in the sky, rocks, soil, and water. Finally, students will learn about plants and animals.

This program uses phenomena, events that students might observe in the world around them, to inspire interest in science and guide inquiry. The design of the instructional materials follows the research-based 5E model. This model has 5 phases: Engage, Explore, Explain, Elaborate, and Evaluate. Following this model, activities are sequenced to support deeper understanding.

Caregivers, below are suggestions for you to help your students gain proficiency in science and succeed in this course: Look through recently completed content and be sure to ask lots of questions. Encourage students to explain what they have learned in their own words or in their first language.

Ask about homework assignments and check that your student has completed them.

Help your student collect materials and information for school activities.

Advise your student to use computers, tablets, or other devices in school or at the library. If you have a home computer, help your student do research online.

With your help and these strategies, your student can have a fun and successful experience this year!

Cordially,

---

Science Teacher

Original Text: In this Topic, students learn about animals, specifically about the external structures of birds, mammals, and fish; how animals grow and change; and how animals go through a life cycle. First, in Experience 1, students compare how the external structures of different animals help them live, interact, and survive in their environment. Then, in Experience 2, they identify and compare ways young animals resemble their parents. Finally, in Experience 3, students record observations and describe the basic life cycles of a bird, mammal, and fish.

Updated Text: In this Topic, students learn about animals, specifically about the external structures of birds, mammals, and fish; how animals grow and change; and how animals go through a life cycle. First, in Experience 1, students compare how the external structures of different animals help them live, interact, and survive in their environment. Then, in Experience 2, they identify and compare ways young animals resemble their parents. Finally, in Experience 3, students record observations and describe the basic life cycles of a bird, mammal, and fish. As you progress through the topic, connect the activities back to Topic 6, Living Things and Environments. Students can apply what they learned in Topic 6 about how living things have basic needs (TEKS 1.12A) to how the structures of animals help them survive in an environment. They can also apply what they learned about living things producing young to parents and young animals (TEKS 1.12B) with life cycles they learn about in Topic 7.

Location: Topic 6, Experience 2 Key Ideas Presentation: Animal Structures and Behaviors, Slide 6, How do animals get water and air?, Slide and Teacher Support

Original Text:

Original slide broken into four slides based on SRP Review of TEKS 13.B.xvii, 13.B.xxiii, and 13.B.xxiv, all subsequent slides are renumbered. [Slide] How do animals get water and air? [Photo of a dolphin][photo of 3 elephants][photo of a diving beetle] [slide notes] How do animals get water and air? Teacher Support Read aloud the title question. Point to each photo and name the animal. Ask students what they know about these animals. Display the next slide. Have a volunteer read the first sentence. Remind students that all animals need water and air to stay alive. Discussion Have students look at the photo of the dolphin as a volunteer reads the text below the photo. Call on a student to point to the blowhole on the dolphin. Provide help as needed. Ask: Why would a dolphin have a blowhole rather than a nose? Lead students to understand that a dolphin lives in water, so a nose would draw in water, not air. Discuss how the blowhole is a better structure for the dolphin to get air. Direct students' attention to the photo of the elephant as a volunteer reads the text below the photo. Point out that elephants live in hot climates and are tall animals. Tell students that an elephant's trunk is a nose, but with great flexibility different uses. Ask students how the elephant's trunk is helps them get water. Ask: How does a trunk help an elephant get water? (With a long trunk, an elephant doesn't have to bend down to drink, it can bring the water to its mouth.) Let students know that elephants store up to 5.5 liters of water in their trunk. They either transfer it into their mouth to drink or spray themselves or each other with it to cool off. Ask: How else do you think elephants use their trunks? (Elephants also use their trunks to grab food and place it in their mouths. They breathe air through the trunk.) Ask student to look at the photo of the diving beetle as a volunteer reads the text below the photo. Tell students that the diving beetle is under water and point out the air bubble. Ask: How can the beetle use this air bubble? (It can breathe in air from the bubble.)

Updated Text: [Slide] How do animals get water and air? [Photo of a dolphin] [slide notes] How do animals get water and air? Teacher Support Read aloud the title question. Point to the photo and name the animal. Ask students what they know about this animal. Display the next slide. Have a volunteer read the first sentence. Remind students that all animals need water and air to stay alive. Discussion Have students look at the photo of the dolphin as a volunteer reads the text next to the photo. Call on a student to point to the blowhole on the dolphin. Provide help as needed. Ask: Why would a dolphin have a blowhole rather than a nose? Lead students to understand that a dolphin lives in water, so a nose would draw in water, not air. Discuss how the blowhole is a better structure for the dolphin to get air. Ask: What structures do dolphins use to take in water? Why do you think this? Sample Answer: Dolphins use their mouth and teeth to take in water. Dolphins get water from the food they eat. Discuss how many types of dolphin live in salt water. They need freshwater, so even though they live in water, they cannot drink the water. Therefore, like many marine animals, they depend on the food they eat for water. Remind students of the anteater and spider they saw on the previous slides and go back to those photos. Have students make careful observations of the photos. Ask: What behavior do you think a spiders uses to find water? Sample Answer: A spider traps water in its web. If necessary, direct students' attention to the droplets of water in the web. Tell students that some spiders eat their webs that have water droplets on it. Other spiders use special structures in their mouths that let them take water into their mouths. Ask: What structures do you think

anteaters use to take in water? Sample Answer: Anteaters use their snout and tongue to take in water. Address Misconceptions Students may think an anteater and dolphins drink water like other mammals. Let them know that both animals get water from the food they eat rather than going to a water source and drinking. Anteaters may also lick dew drops from vegetation. Point out that both the spider and anteater take in dew drops for water.

Location: Edited Grade-Level School to home letter throughout the document to better meet the requirements of the TRR rubric.

Original Text: Dear Family Member or Caregiver, I am looking forward to helping my students learn about science. Because I know that you want your student to be successful, I offer these suggestions so that you can help them gain proficiency in science. Look through recently completed lessons and be sure to ask lots of questions. One of the best ways for students to check on their learning is to explain it to someone else. Ask about homework assignments and check that they have completed them. Help your student collect materials and information for school activities. Encourage computer literacy. Advise your student to use computers, tablets, or other devices in school or at the library. If you have a home computer, help your student learn to do research online. In Grade 2, students will be introduced to topics in Physical, Earth, and Life science. Students will learn about matter, force, motion, and sound. They will explore patterns in the sky and Earth's resources. Finally, students will learn about organisms and environments. I encourage you to stay involved in your student's learning. By all means, visit the classroom during open house or make an appointment with me if you have questions. Cordially, \_\_\_\_\_ Science Teacher

Updated Text: Dear Students and Caregivers, In Grade 2, students will be introduced to topics in Physical, Earth, and Life science. Students will learn about matter, force, motion, and sound. They will explore patterns in the sky and Earth's resources. Finally, students will learn about organisms and environments. This program uses phenomena, events that students might observe in the world around them, to inspire interest in science and guide inquiry. The design of the instructional materials follows the research-based 5E model. This model has 5 phases: Engage, Explore, Explain, Elaborate, and Evaluate. Following this model, activities are sequenced to support deeper understanding. Caregivers, below are suggestions for you to help your students gain proficiency in science and succeed in this course: Look through recently completed content and be sure to ask lots of questions. Encourage students to explain what they have learned in their own words or in their first language. Ask about homework assignments and check that your student has completed them. Help your student collect materials and information for school activities. Advise your student to use computers, tablets, or other devices in school or at the library. If you have a home computer, help your student do research online. With your help and these strategies, your student can have a fun and successful experience this year! Cordially,

---

going to a water source and drinking. Anteaters may also lick dew drops from vegetation. Point out that both the spider and anteater take in dew drops for water. Try This! Form several small groups. Assign each group one of the animals shown in this presentation. Have students build a tree map for their animal that shows what structures and what behaviors the animal uses to find and take in food, water, and air. Then, place the tree maps on the wall and have students compare how the different animals find and take in food, water, and air. An example tree map for a group assigned dolphins would include dolphins as the top category. It could then have three subcategories, food, water, and air. From those categories, the map could include structures and behaviors, where they would list structures like a blowhole and behaviors swimming to the surface.

Updated Text: [New Activity slide] Finding and Taking in Water and Air Answers Explain Compare how the giraffe and the elephant behave to find and take in water and air. [Answer Box] Sample answer: A giraffe spreads its front legs and bends down to reach the water. It drinks with its mouth. An elephant uses its trunk to reach the water and transfers the water into its mouth to drink. Both animals take in air around them through their noses. [Photo of giraffe drinking water: ELS25\_RD02\_TX\_T06L02\_R2640451.jpg] [slide notes] Finding and Taking in Water and Air Teacher Support Complete this activity as a class or print the slide for use by individual students or student pairs. Read aloud the sentence. Work with students to write an answer to compare how the giraffe and the elephant behave to find and take in food. Have students recall how the elephant finds and takes in water and air. Help students identify the behaviors the animals use and not just the structures. Make sure students recall that an elephant's trunk is the elephant's nose. Display the next slide to show a sample answer.

answer. Ask the group whether they want to change or add anything in the answer. Record a final answer. Display the next slide to show students the correct answers.

Updated Text: [Slide] Exit Ticket Compare how the behaviors and structures of each animal help it find and take in food, water, and air. [Photo of anteater][Photo of honey bees in a honey comb][photo of a spider in a web] [slide notes] Exit Ticket Teacher Support Complete this activity as a class or print the slide for use by individual students or student pairs. Read aloud the directions. Let students know they will verbally answer the question. If necessary, review the meanings of structure and behavior. Call on students to name the animal in each picture. [anteater, honeybees, spider] Have student partners discuss the answer for each picture. Ask What structures does the anteater use to find food and take in food, air, and water? how the behaviors of the spider and anteater help them find food, water, and air. Sample Answer: A spider builds a web to trap food and water. An anteater digs the ground to find ants. Say Compare how the structures of the spider and bee help them find food, water, and air. Move around the classroom and listen to assess student ideas. Then ask volunteers to share their answer. Ask the group whether they want to change or add anything in the answer. If their answer includes a structure and a behavior, ask them to identify which is which. For example, the anteaters' long snouts are structures. Digging into anthills is a behavior.

Original Text: In this topic, students learn that the natural world has recognizable patterns that can be observed in systems and processes. First, in Experience 1, they describe the sun as a star and recognize that the moon reflects the sun's light. Then, in Experience 2, they measure, record, and graph weather information. Finally, in Experience 3, they investigate different types of severe weather events and explain that each one is most common in a given region of the United States.

Updated Text: In this topic, students learn that the natural world has recognizable patterns that can be observed in systems and processes. First, in Experience 1, they describe the sun as a star and recognize that the moon reflects the sun's light. Then, in Experience 2, they measure, record, and graph weather information. Finally, in Experience 3, they investigate different types of severe weather events and explain that each one is most common in a given region of the United States. As you progress through the topic, connect the activities back to Topic 3, Sound and Volume. Students can use what they learned in Topic 3 about sound and vibrations (TEKS 2.8A) and apply it to what they learn in Topic 4 about severe weather events such as tornadoes. They can also apply what they learned in Topic 3 about how people use levels of sound (TEKS 2.8B) and how devices that use sound could be used to warn people about severe weather events.

**Original Text:** In this topic, students learn about Earth’s resources. First, in Experience 1, they investigate the way the movement of water and wind can change Earth’s surface. Then, in Experience 2, students distinguish between natural resources and resources made by people. Finally in Experience 3, students recognize that people affect resources and that resources can be conserved by reuse and recycling.

**Updated Text:** In this topic, students learn about Earth’s resources. First, in Experience 1, they investigate the way the movement of water and wind can change Earth’s surface. Then, in Experience 2, students distinguish between natural resources and resources made by people. Finally in Experience 3, students recognize that people affect resources and that resources can be conserved by reuse and recycling. As your progress through the topic, connect the activities back to Topic 4, Patterns in the Sky. Students can use what they learned in Topic 4 about precipitation, wind, and severe weather events, such as floods (TEKS 2.10B, 2.10C) and apply it to what they are learning about resources and how the movement of water and wind can change Earth’s surface in Topic 5.

**Original Text:** In this topic, students learn about how organisms interact with each other and with their environments. First, in Experience 1, they identify differences in environments and describe how the physical characteristics of environments support the plants and animals in an ecosystem. Then, in Experience 2, they explain and demonstrate how some plants depend on other living things, wind, or water for pollination and seed dispersal. Finally, in Experience 3, they describe the purpose of a food-chain model, identify producers and consumers in a food chain, and then create food chains to demonstrate the dependence of animals on other living things.

ISBN: 9781428553804

Location: [Teacher Version] Topic 2, Experience 1, Hands-On Station Activity: How does friction affect the distance a model car will travel? whole page

Original Text: [no introduction] 1 Predict How will different surfaces affect how far a model car travels? 2 Investigate Plan an investigation to explore the patterns of friction on a model car. Consider following the steps below as you plan and conduct your investigation. 1. Set up a wood ramp between a stack of books and an even surface. 2. Place one of the materials along the even surface at the bottom of the ramp. 3. Place the car at the top of the ramp. Release the car. After the car stops, measure the distance from the base of the ramp to the car. Record your measurement in the table. 4. Repeat steps 3 and 4 with the other surface materials.

Updated Text: [introduction] In this Hands-On Station Activity, you will plan and conduct an investigation to explore the patterns of contact forces. 1 Predict How will different surfaces affect how far a model car travels? 2 Investigate Plan a descriptive investigation to explore the patterns of friction on a model car. Remember that friction is a contact force. Use the following materials as you plan your investigation. Materials: wood ramp; toy car; materials with different surface textures (examples could include notebook paper, sand paper, or cloth material) Conduct your descriptive investigation and record your data in step 3.

ISBN: 9781323223352

Current Page Number(s): 150

Location: Topic 6 Overview, Preview the Topic

Original Text:

Preview the Topic In this topic, students learn about ecosystems. First, in Experience 1, students identify producers, consumers, and decomposers and explain how plants can use energy and matter to create their own food. Next, in Experience 2, students describe the cycling of matter and the flow of energy through food webs. Finally, in Experience 3, students use fossil evidence to identify and describe past environments. PREVIEW ANCHORING PHENOMENON Students watch and respond to a short Anchoring Phenomenon Video of a panda eating bamboo. As students progress through the Experiences, they will use sense-making activities to help them answer the Anchoring Phenomenon question, How does a bamboo plant make food that pandas can eat? Teacher Background Watch the Teacher Background Video Ecosystems to refresh your knowledge of topic content. Key concepts to support instruction of this topic: • Animals and plants play important roles in maintaining an ecosystem. • Certain animals and plants have developed the ability to adapt and thrive in changing ecosystems. Others perish or migrate to new locations. • Carbon dioxide is a gas in the atmosphere that plants and other producers use to make their own food. • Food webs are systems of interconnected food chains. • Decomposers are organisms that break down dead plant and animal matter. They use matter and energy from waste and dead organism bodies. Teacher Prep In addition to the Teacher Background Video, there are Teacher Prep Videos to help you prepare for every Experience. These include a preview of the Experience as well as classroom management strategies to make every Science Experience a success! Common Misconceptions As students explore the content, be attentive to common misconceptions that may arise, and address as needed. Common misconceptions are listed in bold type. The subsequent text explains the misconceptions. • Ecosystems do not change over time. Explain that there are several factors that cause ecosystems to change. These factors include environmental changes, such as drought or flooding, and human activity, such as clearing land for building. • Producers are unable to defend themselves against consumers. Point out that many plants have natural defense structures, such as thorns and spikes or internal poisons intended to sicken, that protect them from consumers. • Fossils are always the remains of an organism's body. Explain that fossils include imprints such as footprints or shapes left by the body of a plant or animal, and that all fossils provide evidence of life in the past.

assign assets and activities that support the TEKS on the course to provide intervention. Look especially for "got-more-time" assets, those marked with a plus sign which are designed to personalize learning, such as Topic Readers. You can also use the activities in "Targeted Instruction" to close any learning gaps identified. [Box] Targeted Instruction If you have students who have not yet met grade-level mastery of concepts in this Experience, try this out: • Use a rope to model waves. Stretch a rope over a table surface or the floor. Have a student hold each end of the rope. One student should move the end of their rope back and forth until a wave occurs and moves along the rope. Have the student moving the rope vary how fast and how far they move the rope. Energy transfer is visible through the wave motion of the rope—the energy from the student’s moving hand transfers along the rope to the other end. Students should see the relationship between the amount of energy input and the size of the waves and how fast they move back and forth. Ask How do the waves change when the movement on the rope changes? Sample answer: Larger movements make bigger waves. Faster movements make more waves.

You can also use the activities in "Targeted Instruction" to close any learning gaps identified. [Box] Targeted Instruction If you have students who have not yet met grade-level mastery of concepts in this Experience, try these out: • Model weathering and erosion by water. Have students closely examine the surface of small pieces of dry sandstone textures and shapes. Add the rocks to a jar; cover the rocks with water, place the lid on the jar, and vigorously shake the jar for a minute (be sure to hold the lid tightly). Carefully pour the rocks onto a paper towel. Observe changes to the rocks' surfaces. • Model weathering by ice. Take two similar sized small pieces of sandstone. Place one piece in a cup and the other in a second cup. Pour equal amounts of water over each piece of sandstone. Put one cup in the freezer overnight. Leave the other cup at room temperature. Take the cup out of the freezer and allow it to thaw. Make

observations about the sandstone—it may be more breakable. Compare it to the piece of sandstone left at room temperature. • Model wind deposition by making a sand dune. You will need a large plastic bin containing about 6 cm of sand, a small rock. Use the bottom of a cardboard box to blow on the sand. Safety Wear safety goggles. Have students write a summary describing the slow processes they modeled.

Updated Text: PLANT STRUCTURE AND FUNCTION Students answer questions about plant structure and function by completing an editable/printable or online quiz. Give students mastering English language extra time to translate assessments as needed. If the quiz reveals students have not yet achieved grade-level mastery of the content in this Experience, remember that you can assign assets and activities that support the TEKS on the course to provide intervention. Look especially for "got-more-time" assets, those marked with a plus sign which are designed to personalize learning, such as Topic Readers. You can also use the activities in "Targeted Instruction" to close any learning gaps identified. [Box] Targeted Instruction If you have students who have not yet met grade-level mastery of concepts in this Experience, try this out: • Wet two paper towels. Leave one flat and roll the other into a tight shape. Examine both after 15 minutes, 1 hour, and then several hours later. from the plant. Ask What do you observe about the two paper towels? Sample answer The rolled paper towel stayed wet for a longer time than the flat paper towel. Let students know that the shape reduced the surface area that is exposed to the air. This prevents water from evaporating Say Think about what you just observed. A cactus has spines, which are a type of leaf. How do you think spines function? How do you think

spines help cacti survive in their environment? Sample answer: Spines will hold on to water longer, preventing evaporation. This is important because cacti live in dry deserts.

Original Text: Dear Family Member or Caregiver, I am looking forward to helping my students learn about science. Because I know that you want your student to be successful, I offer these suggestions so that you can help them gain proficiency in science. Look through recently completed lessons and be sure to ask lots of questions. One of the best ways for students to check on their learning is to explain it to someone else. Ask about homework assignments and check that they have completed them. Help your student collect materials and information for school activities. Encourage computer literacy. Advise your student to use computers, tablets, or other devices in school or at the library. If you have a home computer, help your student learn to do research online. In Grade 4, students will be introduced to topics in Physical, Earth, and Life science. Students will learn about matter, force, motion, and energy. They will explore Earth, space, and patterns on Earth. Finally, students will learn about interactions in ecosystems and organisms. I encourage you to stay involved in your student's learning. By all means, visit the classroom during open house or make an appointment with me if you have questions. Cordially, \_\_\_\_\_ Science Teacher

Updated Text: Dear Students and Caregivers, In Grade 4, students will be introduced to topics in Physical, Earth, and Life science. Students will learn about matter, force, motion, and energy. They will explore Earth, space, and patterns on Earth. Finally, students will learn about interactions in ecosystems and organisms. This program uses phenomena, events that students might observe in the world around them, to inspire interest in science and guide inquiry. The design of the instructional materials follows the research-based 5E model. This model has 5 phases: Engage, Explore, Explain, Elaborate, and Evaluate. Following this model, activities are sequenced to support deeper understanding. Caregivers, below are suggestions for you to help your students gain proficiency in science and succeed in this course: Look through recently completed content and be sure to ask lots of questions. Encourage students to explain what they have learned in their own words or in their first language. Ask about homework assignments and check that your student has completed them. Help your student collect materials and information for school activities. Advise your student to use computers, tablets, or other devices in school or at the library. If you have a home computer, help your student do research online. With your help and these strategies, your student can have a fun and successful experience this year! Cordially, \_\_\_\_\_ Science Teacher

Original Text: In this topic, students learn that energy is everywhere and can be observed in cycles, patterns, or systems. First, in Experience 1, students investigate and describe energy transformations in systems. Then, in Experience 2, students explore electrical energy in the context of circuits and energy transformation. Finally, in Experience 3, students explore and explain how light travels.

Updated Text: In this topic, students learn that energy is everywhere and can be observed in cycles, patterns, or systems. First, in Experience 1, students investigate and describe energy transformations in systems. Then, in Experience 2, students explore electrical energy in the context of circuits and energy transformation. Finally, in Experience 3, students explore and explain how light travels. As you progress through the topic, connect the activities back to Topic 1 Matter and Topic 2 Forces and Motion. Students can apply what they learned in Topic 1 about materials that conduct or insulate electric energy (TEKS 5.6A) to what they learn in Topic 3 about the transformation of energy in systems and circuits. They can use what they learned in Topic 2 about patterns of motion (TEKS 5.7A) to what they learn in Topic 3 about how complete circuits can transform energy into motion.

computer literacy. Advise your student to use computers, tablets, or other devices in school or at the library. If you have a home computer, help your student learn to do research online. In Grade 5, your student will be introduced to topics in Physical, Earth, and Life science. Students will learn about matter, force, motion, and energy. They will explore Earth, space, and patterns on Earth. Finally, students will learn about interactions in ecosystems and organisms. I encourage you to stay involved in your student's learning. By all means, visit the classroom during open house or make an appointment with me if you have questions. Cordially, \_\_\_\_\_ Science Teacher

Updated Text: Dear Students and Caregivers, In Grade 5, your student will be introduced to topics in Physical, Earth, and Life science. Students will learn about matter, force, motion, and energy. They will explore Earth, space, and patterns on Earth. Finally, students will learn about interactions in ecosystems and organisms. This program uses phenomena, events that students might observe in the world around them, to inspire interest in science and guide inquiry. The design of the instructional materials follows the research-based 5E model. This model has 5 phases: Engage, Explore, Explain, Elaborate, and Evaluate. Following this model, activities are sequenced to support deeper understanding. Caregivers, below are suggestions for you to help your students gain proficiency in science and succeed in this course: Look through recently completed content and be sure to ask lots of questions. Encourage students to explain what they have learned in their own words or in their first language. Ask about homework assignments and check that your student has completed them. Help your student collect materials and information for school activities. Advise your student to use computers, tablets, or other devices in school or at the library. If you have a home computer, help your student do research online. With your help and these strategies, your student can have a fun and successful experience this year! Cordially, \_\_\_\_\_ Science Teacher

Updated Text: 1. Tree Maps

Tree maps help scientists to show the hierarchical relationship between data. A tree map starts with the highest level of data and breaks it down into smaller categories.

Ask two classmates what their favorite meal is. Construct a Tree Map to break down each classmate's favorite meal. The highest level of the tree map is provided. On the first level below the "Favorite Meal" level, list each favorite meal of your classmates. On the next level, list the parts of each meal.

Students should draw two lines from Favorite Meal to two new boxes with meals such as Macaroni and Cheese or Saag Paneer. From the listed meals, students should list the parts of the meal, such as pasta, milk, and cheese under Macaroni and Cheese and spinach, cheese (paneer), spices, and rice under Saag Paneer.

Original Text: In this topic, students learn about patterns related to Earth’s rotation. First, in Experience 1, they demonstrate how Earth rotates on its axis and explain how this rotation is related to the day–night cycle and the appearance of the sun moving across the sky. Then, in Experience 2, students investigate how the movement of the sun across the sky causes changes in shadow positions and shape.

Updated Text: In this topic, students learn about patterns related to Earth’s rotation. back to Topic 2, Force and Motion. Students can apply what they learned in Topic 2 about patterns of motion (TEKS 5.7A) to what they are learning about the motion of Earth in space in Topic 4.

## Component: *Grade 5 Teacher Guide*

ISBN: 9781323223369

Current Page Number(s): 158

Location: Topic 6 Overview, Preview the Topic

**Original Text:** Preview the Topic In this topic, students learn about patterns, cycles, systems, and relationships within environments and ecosystems. First, in Experience 1, students describe how organisms survive by interacting with biotic and abiotic factors in a healthy ecosystem. Then, in Experience 2, students explain and predict how changes in an ecosystem can affect the cycling of matter and the flow of energy in a food web. Finally, in Experience 3, students describe a healthy ecosystem and explain how human activities can be beneficial or harmful to an ecosystem. **PREVIEW ANCHORING PHENOMENON** Students watch and respond to a short Anchoring Phenomenon Video of animals crossing a wildlife bridge. As students progress through the Experiences, they will use sense-making activities to help them answer the Anchoring Phenomenon question How can animals live safely near roads in Texas? **Topic Readiness Test** Students answer questions to show what they already know about ecosystems by completing a printed or online Topic Readiness Test. **Teacher Background** Watch the Teacher Background Video Ecosystems to refresh your knowledge of topic content. **Key concepts to support instruction of this topic:** • An ecosystem consists of all the organisms living in a particular place as well as the nonliving parts of the environment. • Biotic refers to the living

**Updated Text:** Preview the Topic In this topic, students learn about patterns, cycles, systems, and relationships within environments and ecosystems. First, in Experience 1, students describe how organisms survive by interacting with biotic and abiotic factors in a healthy ecosystem. Then, in Experience 2, students explain and predict how changes in an ecosystem can affect the cycling of matter and the flow of energy in a food web. Finally, in Experience 3, students describe a healthy ecosystem and explain how human activities can be beneficial or harmful to an ecosystem. As you progress through the topic, connect the activities back to Topic 3, Energy. Students can apply what they learned in Topic 3 about the transfer of energy within a system (TEKS 5.8A) to the flow of energy through ecosystem interactions in Topic 6. **PREVIEW ANCHORING PHENOMENON** Students watch and respond to a short Anchoring Phenomenon Video of animals crossing a wildlife bridge. As students progress through the Experiences, they will use sense-making activities to help them answer the Anchoring Phenomenon question How can animals live safely near roads in Texas? **Topic Readiness Test** Students answer questions to show what they already know about ecosystems by completing a printed or online Topic Readiness Test. **Teacher Background** Watch the Teacher Background Video Ecosystems to refresh your knowledge of topic content. **Key concepts to support instruction of this topic:** • An ecosystem consists of all the organisms living in a particular place as well as the nonliving parts of the environment. • Biotic refers to the living or once-living parts of an ecosystem. Abiotic refers to the parts of an ecosystem that are nonliving and have never been living. • A healthy ecosystem contains suitable types and amounts of biotic and abiotic factors needed to support the organisms that live there. **Teacher Prep** In addition to the Teacher Background Video, there are Teacher Prep Videos to help you prepare for every Experience. They include a preview of the Experience and classroom management strategies to make every Science Experience a success! **Common Misconceptions** As students explore the content, be attentive to common misconceptions that may arise and address as needed. Common misconceptions are listed in bold type. The subsequent text explains the misconceptions. • An ecosystem is simply a collection of organisms living together. Reinforce the concept that an ecosystem includes biotic and abiotic factors, and the interactions between living and nonliving things in the environment. • Organisms higher in a food web eat all the organisms lower in the food web. Explain that organisms higher in the food web may eat some, but not necessarily all, of the organisms below them. For example, consumers at the top of a food web would not necessarily eat plants.

Updated Text: LIGHT Students answer questions about light by completing an editable/printable or online quiz. Give students mastering English language extra time to translate assessments as needed. If the quiz reveals students have not yet achieved grade-level mastery of the content in this Experience, remember that you can assign assets and activities that support the TEKS on the course to provide intervention. Look especially for "got-more-time" assets, those marked with a plus sign which are designed to personalize learning, such as Topic Readers. You can also use the activities in "Targeted Instruction" to close any learning gaps identified. [Box] Targeted Instruction If you have students who have not yet met grade-level mastery of concepts in this Experience, try these out: • Dim the light in the room, and have students use a flashlight to demonstrate the reflection of light off a wall or reflective surface. • Have students work in pairs to demonstrate refraction. On a white piece of paper, have students draw a simple image, such as an arrow. Fill a glass with water. One student should lower the paper with the drawing behind the glass of water. The other student should observe what happens to the drawing as it is lowered. Have the students switch places. • Demonstrate light absorption. Shine a flashlight on a solid object, such as dark block. Have students make observations. Shine the flashlight a transparent object, such as an ice cube. Ask What did you observe? Which object do you think absorbed light? Why? Sample answer: The solid block absorbed light, the light did not go through it. The ice cube did not, as the light went through it. (Students

Original Text: Reading 4D Read aloud the text with beginning and intermediate language learners. Use prereading supports, to enhance comprehension. Point out that the Spanish cognate for equal is igual. • Beginning Read aloud page 3 of the text with students, pointing out the words equal and unequal. Then draw two identical circles. Write equal below the circles. Then, draw one small and one large circle. Write unequal below the circles. Ask students to point to the two sets of circles and read the labels. • Intermediate Provide the following sentence frames for students to complete and read aloud: Equal means the \_\_\_\_\_ number or size. Unequal means a \_\_\_\_\_ number or size. • Advanced/Advanced High Have student pairs summarize the Read About It and take turns describing the strength of equal forces and unequal forces.

Updated Text: Reading 4D Read aloud the text with beginning and intermediate language learners. Use prereading supports to enhance comprehension. Point out that the Spanish cognate for equal is igual. • Beginning Review the title, subheads, and captions in the reading, and have students make predictions about the text as a prereading support. Read aloud page 3 of the text with students, pointing out the words equal and unequal. Then draw two identical circles. Write equal below the circles. Then, draw one small and one large circle. Write unequal below the circles. Ask students to point to the two sets of circles and read the labels. • Intermediate As a prereading activity, display the pictures from the text and ask students to make predictions about the reading. Have student pairs discuss and explain their predictions. Provide the following sentence frames for students to complete and read aloud: Equal means the \_\_\_\_\_ number or size.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Unequal means a \_\_\_\_\_ number or size. • Advanced/Advanced High As a prereading activity, activate student prior knowledge by having student pairs discuss what they already know about forces, what new information they want to learn from the text, and how they have used forces in their lives. Have student pairs summarize the Read About It and take turns describing the strength of equal forces and unequal forces.

Original Text: Reading 4C, 4D Guide students to use pre reading supports to enhance and confirm comprehension. • Beginning Have student pairs match the terms canyon, delta, and sand dune to images in the text that illustrate each type of landform. • Intermediate Using illustrations from the text, have students locate in the text the key understandings about each type of landform. • Advanced Have student pairs take turns reading a caption from a photo. Then have them tell how the picture helps them understand the text. • Advanced High Have student pairs explain how the images support the text to provide additional or enhanced information about the formation of each landform.

Updated Text: Reading 4C, 4D Guide students to use prereading supports to enhance and confirm comprehension. • Beginning As a prereading activity, display the pictures from the text and ask students to look for connections between the images in order to predict the topic of the reading. Have student pairs match the terms canyon, delta, and sand dune to images in the text that illustrate each type of landform. • Intermediate Review the title and have students make predictions about the text as a prereading support. Using illustrations from the text, have students locate in the text the key understandings about each type of landform. • Advanced As a prereading activity, give students five minutes to brainstorm ideas relating to the topic of the reading. Then give them another five minutes to organize their ideas and to form sentences. Once they have completed this, encourage them to get up and move around the room and share their ideas with other learners. During the reading, have student pairs take turns reading a caption from a photo. Then have them tell how the picture helps them understand the text. • Advanced High As a prereading activity, share the question “What do you know about how Earth’s surface changes over time?” Give students 60 seconds to discuss the question with a partner. Have students find a new partner and repeat the process. Have student pairs explain how the images support the text to provide additional or enhanced information about the formation of each landform.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Earth on its . Guide students to use forms of the word rotation, as needed, including rotate and rotates. • Advanced Ask students questions for which the answers are the terms on the board. Then guide students to define each of the terms. • Advanced High Have students discuss with a partner their observations of the video. Then have partners take turns asking questions about how the words model, rotation, and axis relate to their observations.

Updated Text: Listening 21 Write the terms model, rotation, and axis on the board. Instruct students to repeat the words after you as you read the words aloud. Guide students to respond to increasingly complex directions as needed throughout the activity. • Beginning Model using the words rotation and axis as you spin a globe. Verbally instruct students to repeat the actions when prompted with the terms rotation and axis. Monitor for the student's ability to follow your directions in order to complete the task. • Intermediate Verbally instruct students to model the words rotation and axis using a globe. Monitor for student's ability to follow your directions and use the globe to complete the task. • Advanced Instruct students to physically demonstrate the terms rotation and axis using their bodies as models. Monitor for the student's ability to follow your direction of using their body as a model rather than a globe in order to complete the task. • Advanced High Verbally instruct students to discuss with a partner their observations of the video. After the discussion, instruct partners to draw a model and label it with the words model, rotation, and axis. Monitor for the student's ability to follow your directions of discussing their observations and drawing a model in order to complete the task.

Original Text: Learning Strategies 1F, Listening 2I Have students demonstrate listening comprehension by summarizing information about organisms and food chains. • Beginning Ask simple yes/no questions about the interactions between organisms in the food chain. Further, encourage students to use accessible language as they are able. • Intermediate Have students summarize the interactions between the organisms in the food chain to a partner. Students should use the words producer, consumer, and decomposer in their sentences. Then have students switch roles. • Advanced Have students discuss with a partner the cycling of matter through the food web. Students should demonstrate understanding of the terms producer, consumer, and decomposer in their sentences. • Advanced High Have students take turns summarizing a specific change in the food web and how that change would affect the flow of energy through the ecosystem.

Updated Text: Learning Strategies 1F, Listening 2I Display a simple food chain or food web. Have students demonstrate listening comprehension by following increasingly complex directions as needed throughout the summarizing activity about organism interactions. • Beginning. Instruct students to point to producers, consumers, and decomposers when prompted. Further, encourage students to use accessible language as they are able. Monitor for the student's ability to follow your directions in order to complete the task. • Intermediate Instruct students to write the letter "P" beside producers, the letter "C" beside consumers, and the letter "D" beside decomposers on the model. Monitor for the student's ability to follow your directions in order to correctly label all of the organisms present. • Advanced Verbally instruct students to choose three colors with which to represent producers, consumers, and decomposers. Instruct students to create a legend that explains what each color will represent (for example, green may represent producers). After students have created a legend, instruct students to circle the producers, consumers, and decomposers in their chosen colors. Monitor for the student's ability to follow your directions in order to create the legend and circle the correct organisms. • Advanced High Verbally instruct students to draw one additional producer, consumer, and decomposer on the food web, label each organism accordingly, and include arrows indicating the flow of energy to and from each additional organism. Monitor for the student's ability to follow this complex set of directions in order to complete the complex task provided.

Original Text: Listening 2D Write property and mixture on the board and say the words. Have students repeat after you. Encourage students to monitor their understanding of spoken language and ask for clarification as needed. • Beginning Have students write the words sand and iron on index cards. Then make simple statements that describe the properties of iron or sand before and after they are mixed. Have students hold up the index card to show which substance has that property. • Intermediate Have students describe to a partner one property of iron or sand before and after they are mixed. Then have students switch roles. • Advanced Have student pairs take turns asking and answering questions about the properties of iron and sand before and after they are mixed. • Advanced High Have students discuss their experiences with other mixtures that maintain the properties of their ingredients.

Updated Text: Listening 2D Write property and mixture on the board and say the words. Have students repeat after you. Monitor student understanding of vocabulary by asking questions. • Beginning Model or list the properties of iron or sand. Ask simple yes/no questions to monitor if students can identify properties of metals. • Intermediate Have students describe to a partner one property of iron or sand before and after they are mixed. After listening to a partner, monitor how students respond using the following sentence frames: I heard you say \_\_\_\_; I think \_\_\_\_ is an example of \_\_\_\_ because \_\_\_\_\_. Then have students switch roles. • Advanced Have student pairs take turns asking and answering questions about the properties of iron and sand before and after they are mixed. As students listen to others, remind them to ask themselves questions such as: Do I understand what this person is saying? Monitor if a student knows what that word means. • Advanced High Have small groups pantomime mixing and separating the sand and iron filings. Monitor how each student acts out the process, and have other students narrate the actions.

Original Text: Listening 2D Have students monitor their understanding of spoken language and seek clarification as needed. Write battery, wires, bulb, and circuit on the board. Read the words aloud with students. Then model the demo again. • Beginning Have students write the words on index cards, and place them near the corresponding parts of the circuit in the demo. • Intermediate After students have described their observations, have them ask partners questions using the words battery, wires, bulb, and circuit. • Advanced/Advanced High Have students use the words battery, wires, bulb, and circuit to discuss with a partner another way to build the circuit they observed.

Updated Text: Listening 2D Write battery, wires, bulb, and circuit on the board. Read the words aloud with students. Monitor their understanding by asking them what each word means. Then model the demo again. • Beginning Use a diagram to model how a circuit works. Monitor how students are listening as you say battery, wires, bulb, and circuit. Have students write the words on index cards and place them near the corresponding parts of the circuit in the diagram. • Intermediate Have students describe to a partner each part of the circuit. After listening to a partner, have students respond using the following sentence frames: I heard you say \_\_\_\_; I think this part of the circuit does \_\_\_\_ because \_\_\_\_\_. Then have students switch roles. Monitor their responses. • Advanced/Advanced High Have students work in small groups to write a list of questions about things they don't understand about circuits. Monitor how students listen to other students and share their lists.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Location: Teacher Guide ELPS Targeted Support

Original Text: Learning Strategies 1D, 1E Write the terms habitat, conservation, and pollution on the board and briefly define them. Guide students to internalize new vocabulary by using and reusing it in speaking and writing activities that build concept and language attainment. • Beginning Draw a T-chart on the board with the headings beneficial and harmful. Display pictures of human activities that impact ecosystems and ask students to classify them as helpful or harmful. Record the activities in the T-chart based on the students' answers. Encourage students to speak using learning strategies by asking for assistance or by conveying ideas by using synonyms or descriptions for English words. • Intermediate Have students orally complete these sentence frames with the words on the board: can be harmful to an ecosystem. can be beneficial to an ecosystem. Cutting down trees can destroy and decrease the health of an ecosystem. • Advanced/Advanced High Have pairs of students take turns choosing a human activity and describing its impact on an ecosystem. Have the other student classify the activity as beneficial or harmful. Then have students work together to describe ways in which harmful impacts could be lessened.

Updated Text: Learning Strategies 1D, 1E Write the terms habitat, conservation, and pollution on the board and briefly define them. Guide students to internalize new vocabulary by using and reusing it in speaking and writing activities that build concept and language attainment. • Beginning Display pictures of human activities that impact ecosystems and ask students to classify them as helpful or harmful verbally. Then have students demonstrate their understanding of a beneficial and a harmful activity by writing and completing this sentence frame: \_\_\_\_\_ is a \_\_\_\_\_ activity. • Intermediate Have students orally complete these sentence frames with the words on the board: \_\_\_\_\_ can be harmful to an ecosystem. \_\_\_\_\_ can be beneficial to an ecosystem. Then have students use the terms beneficial and harmful to write new sentences. • Advanced/Advanced High Have pairs of students take turns choosing a human activity and describing its impact on an ecosystem. Have the other student classify the activity as beneficial or harmful. Then have students work together to write a summary describing ways in which harmful impacts could be lessened.

Original Text: Learning Strategies 1E, 1F, Speaking 3D Draw a water cycle diagram on the board. Write the terms condensation, evaporation, and precipitation next to the diagram. Guide students to internalize the vocabulary words by using and reusing them orally to build concept and language attainment. • Beginning Have students use words that they already know along with pictures to explain the meanings of the words condensation, evaporation, and precipitation. • Intermediate Ask questions about the diagram, using the words condensation, evaporation, and precipitation. Have students answer using words they already know as well as the terms on the board in order to internalize the vocabulary. • Advanced Have students give oral definitions of the terms condensation, evaporation, and precipitation, using words they already know. • Advanced High Have students work independently to define the words condensation, evaporation, and precipitation. Then have partners compare their definitions and tell how the words are related.

Updated Text: Learning Strategies 1E, 1F, Speaking 3D Draw a water cycle diagram on the board. Write the terms condensation, evaporation, and precipitation next to the diagram. Guide students to internalize the vocabulary words by using and reusing them orally to build concept and language attainment. • Beginning Have students use words that they already know along with pictures to explain the meanings of the words condensation, evaporation, and precipitation. Have students demonstrate understanding of the terms by drawing pictures and writing the words next to them. • Intermediate Ask questions about the diagram, using the words condensation, evaporation, and precipitation. Have students answer using words they already know as well as the terms on the board in order to internalize the vocabulary. Have students write their own definitions for the new vocabulary. • Advanced Have students give oral definitions of the terms condensation, evaporation, and precipitation, using words they already know. Have students write their own definitions for the new vocabulary and compare them to definitions in a dictionary. • Advanced High Have students work independently to write definitions for the words condensation, evaporation, and precipitation. Then have partners say what they wrote to compare their definitions and tell how the words are related.

Original Text:

Preview the Topic In Experience 1, students learn about the hierarchical organization of organisms, populations, and the community within an ecosystem. In Experience 2, students become familiar with the ways organisms compete for abiotic and biotic factors. In Experience 3, students investigate the interactions organisms and populations have, such as predation and symbiotic relationships. Finally, in Experience 4, students discover that organisms have variations that can influence the survival of populations. PREVIEW ANCHORING PHENOMENON Students learn about two bear populations in a warming Arctic ecosystem: the polar bear and pizzly bear, a cross between a polar bear and a grizzly bear. Students consider how and why each population might change over time. Topic Readiness Test Students answer questions to show what they already know about organisms and ecosystems by completing a printed or online Topic Readiness Test.

Teacher Background To teach the content of this Topic, you should be familiar with these concepts:

- A population is all members of the same species living together in the same area.
- A variation is a difference in a trait among members of a species in a population. Variation of traits in a population depends on genetic and environmental factors.
- A food web is the arrangement of several interconnected food chains in an ecosystem. When the size of a population changes, the pattern of energy transfer in a food web also changes. Energy transfer is the amount of energy that moves along a food chain from one organism to another.

Teacher Prep Videos Watch the Teacher Prep Videos to help you prepare for each Experience in the program. These videos include a preview of the Experience as well as classroom management strategies to make every Science Experience a success! Common Misconceptions Common misconceptions (in bold type) and explanations follow. These misconceptions will be addressed at point of use.

- All the members of a species live in the same ecosystem. Members of a species can belong to different populations in diverse ecosystems. For example, in Texas, coyote populations range from the Rolling Plains to the Gulf Prairies and Marshes, and they also roam big cities.
- Predator and prey populations in an ecosystem are always similar in size. Predator populations tend to be smaller than

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

their prey populations. Predators are high on the food chain, so a healthy ecosystem will always have more prey than predators. Predator and prey population sizes influence each other.

Updated Text: Preview the Topic In this topic, students will describe and investigate the organization and relationships in ecosystems and describe how variations can be an advantage or disadvantage. In Experience 1, students learn about the hierarchical organization of organisms, populations, and the community within an ecosystem. In Experience 2, students become familiar with the ways organisms compete for abiotic and biotic factors. In Experience 3, students investigate the interactions organisms and populations have, such as predation and symbiotic relationships. Finally, in Experience 4, students discover that organisms have variations that can influence the survival of populations. Students learned about the basic characteristics of living things in Topic 7. They will build on that knowledge in this topic as they explore how organisms compete for the resources they need to survive. PREVIEW ANCHORING PHENOMENON Students learn about two bear populations in a warming Arctic ecosystem: the polar bear and pizzly bear, a cross between a polar bear and a grizzly bear. Students consider how and why each population might change over time. Topic Readiness Students answer questions to show what they already know about organisms and ecosystems by completing a printed or online Topic Readiness Test. Remediation is provided for students who struggle with prerequisite concepts. You could also use the Look Back Presentation to remind students of content they learned in prior grades. Teacher Background To teach the content of this Topic, you should be familiar with these concepts: • A population is all members of the same species living together in an area. • A variation is a difference in a trait among members of a species in a population. Variation of traits in a population depends on genetic and environmental factors. • A food web is the arrangement of several interconnected food chains in an ecosystem. When the size of a population changes, the pattern of energy transfer in a food web also changes. Energy transfer is the amount of energy that moves along a food chain from one organism to another. Teacher Prep Videos Watch the Teacher Prep Videos to help you prepare for each Experience in the program. These videos include a preview of the Experience as well as classroom management strategies to make every Science Experience a success! Common Misconceptions Common misconceptions (in bold type) and explanations follow. These misconceptions will be addressed at point of use. • All the members of a species live in the same ecosystem. Members of a species can belong to different populations in diverse ecosystems. • Predator and prey populations in an ecosystem are always similar in size. Predator populations tend to be smaller than their prey populations. Predator and prey population sizes influence each other.

Original Text: Dear Family Member or Caregiver, I am looking forward to helping my students learn about science. Because I know that you want your student to be successful, I offer these suggestions so that you can help them gain proficiency in science. Look through recently completed content and be sure to ask lots of questions. One of the best ways for students to check on their learning is to explain it to someone else. Ask about homework assignments and check that your student has completed them. Help your student collect materials and information for school activities. Encourage computer literacy. Advise your student to use computers, tablets, or other devices in school or at the library. If you have a home computer, help your student learn to do research online. In Grade 6, students will be introduced to topics in Physical, Earth, and Life science. Students will learn about forces, energy, and changes in matter. They will explore the causes of seasons and tides, the structure of Earth, and how to manage Earth's resources. Finally, students will learn about cell theory, characteristics of living things, and how organisms interact in ecosystems. I encourage you to

stay involved in your student's learning. By all means, visit the classroom during open house or make an appointment with me if you have questions. Cordially, \_\_\_\_\_ Science Teacher

Updated Text: Dear Students and Caregivers, In Grade 6, students will be introduced to topics in Physical, Earth, and Life science. Students will learn about forces, energy, and changes in matter. They will explore the causes of seasons and tides, the structure of Earth, and how to manage Earth's resources. Finally, students will learn about cell theory, characteristics of living things, and how organisms interact in ecosystems. This program uses phenomena, events that students might observe in the world around them, to inspire interest in science and guide inquiry. The design of the instructional materials follows the research-based 5E model. This model has 5 phases: Engage, Explore, Explain, Elaborate, and Evaluate. Following this model, activities are sequenced to support deeper understanding. Caregivers, below are suggestions for you to help your students gain proficiency in science and succeed in this course: Look through recently completed content and be sure to ask lots of questions. Encourage students to explain what they have learned in their own words or in their first language. Ask about homework assignments and check that your student has completed them. Help your student collect materials and information for school activities. Advise your student to use computers, tablets, or other devices in school or at the library. If you have a home computer, help your student do research online. With your help and these strategies, your student can have a fun and successful experience this year! Cordially, \_\_\_\_\_ Science Teacher

Original Text: After the problem has been identified, and the criteria and constraints identified, an engineer will develop possible solutions. This often involves working in teams with other engineers and designers to brainstorm ideas and research materials that can be used in the design. It's important for engineers to think creatively and explore all possible options. Engineers then develop the idea that they feel best solves the problem. Once engineers design a solution, they get to work building a model or prototype of the solution. A model may involve sketching on paper, using computer software, or building a three-dimensional structure. A prototype is a working model of the solution. Building a model or prototype helps an engineer determine whether a solution meets the criteria and stays within the constraints. During this

# Proclamation 2024: Report of New Content

stage of the process, engineers must often deal with new problems and make any necessary adjustments to the model or prototype.

**Updated Text:** After the problem and the criteria and constraints have been identified, an engineer will propose possible solutions. This often involves working in teams with other engineers and designers to brainstorm ideas and research materials that can be used in the design. It's important for engineers to think creatively and to propose solutions that are supported by models and consistent with scientific ideas, scientific principles, and scientific theories. Engineers then develop the idea that they feel best solves the problem considering scientific ideas, scientific principles, and scientific theories. So for example, if an engineer is working on a solution to find life on Mars, they would need to consider the cell theory. Once engineers design a solution, they get to work building a model that serves to support the proposed solution. A model may involve sketching on paper, using computer software, or building a three-dimensional structure. A prototype is a working model of the solution. Building a model or prototype helps an engineer determine whether a solution meets the criteria and stays within the constraints. During this stage of the process, engineers must often deal with new problems and make any necessary adjustments to the model or prototype.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Preview the Topic In Experience 1, students learn about three states of matter and how particles behave in them. In Experience 2, students delve deeper into the physical properties of matter, including those of homogeneous and heterogeneous mixtures. In Experience 3, students learn about elements and the periodic table. In Experience 4, students learn how to identify evidence of chemical change. PREVIEW ANCHORING PHENOMENON Students observe what happens to pizza dough as it is baked. Topic Readiness Test Students answer questions to show what they already know about matter by completing a printed or online Topic Readiness Test. Teacher Background To teach the content of this Topic, you should be familiar with the following concepts: • How materials tend to change when heated or cooled. • States of matter and their relationships to temperature. • Physical properties of matter, including temperature, volume, mass, and magnetism. Teacher Prep Videos Watch the Teacher Prep Videos to help you prepare for each Experience in the program. These include a preview of the Experience as well as classroom management strategies to make every Science Experience a success! Common Misconceptions Common misconceptions are listed first in bold type. The subsequent text explains the misconceptions. These misconceptions will be addressed at point of use. • Chemical changes are physical changes. People sometimes conflate both types of change because what causes a change in physical state (e.g., thermal energy causing melting) can be the same thing that causes or is otherwise a factor in a chemical change. Warming a bar of frozen chocolate can cause it to melt, while providing additional heat might cause it to burn. The former is a physical change, while the latter is a chemical change. • Everything gets denser when it freezes. In general, most substances get denser if their temperature drops, but there are exceptions, such as water. The lesser density of solid water is one of its unique properties.

Updated Text: Preview the Topic In this topic, students compare the states of matter, investigate physical properties, and identify elements and the formation of new substances. In Experience 1, students learn about three states of matter and how particles behave in them. In Experience 2, students delve deeper into the physical properties of matter, including those of homogeneous and heterogeneous mixtures. In Experience 3, students learn about elements and the periodic table. In Experience 4, students learn how to identify evidence of chemical change. Students learned about kinetic energy in Grade 5. They build on and apply their knowledge of kinetic energy as they learn about the relationship between kinetic energy and states of matter. PREVIEW ANCHORING PHENOMENON Students observe what happens to pizza dough as it is baked. Topic Readiness Students answer questions to show what they already know about matter by completing a printed or online Topic Readiness Test. Remediation is provided for students who struggle with prerequisite concepts. You could also use the Look Back Presentation to remind students of content they learned in prior grades. Teacher Background To teach the content of this Topic, you should be familiar with the following concepts: • How materials tend to change when heated or cooled. • States of matter and their relationships to temperature. • Physical properties of matter, including temperature, volume, mass, and magnetism. Teacher Prep Videos Watch the Teacher Prep Videos to help you prepare for each Experience in the program. Original Text:

Preview the Topic In Experience 1, students are introduced to Earth’s four spheres. They learn to differentiate among the biosphere, hydrosphere, atmosphere, and geosphere and identify how the components of each sphere interact. In Experience 2, they become familiar with Earth’s four layers and describe their different characteristics. Finally, in Experience 3, they explore how sedimentary, metamorphic, and igneous rocks form and change through the rock cycle. PREVIEW ANCHORING PHENOMENON Students determine where lava comes from. Students will consider the processes that form lava and cause it to erupt from Earth’s surface. Topic Readiness Test Students answer questions to show what they already know about Earth’s structures by completing a printed or online Topic Readiness Test. Teacher Background To teach this Topic, you should be familiar with the following concepts:

- The biosphere is made up of all of the organisms on Earth. The hydrosphere is made up of water in liquid, solid, and gas form. The atmosphere includes the gases that make up Earth’s outermost layer and it contains Earth’s weather. The geosphere is made up of the rock and metal that form Earth’s four layers.
- Earth has four distinct layers: the crust, mantle, outer core, and inner core. The crust is the thin outermost layer. The mantle is hotter and larger than the crust. Magma is formed in the mantle. Below the mantle is the outer core, which is made of liquid metal. The inner core is a solid sphere of metal at the center.
- The rock cycle continuously changes and recycles Earth’s materials. The rock cycle does not create any new materials.
- Sedimentary rocks are cemented sediments left behind by weathering and erosion. Igneous rocks form from cooled magma and lava. Metamorphic rocks have been changed through intense heat and extreme pressure.

Teacher Prep Videos Watch the Teacher Prep Videos to help you prepare for each Experience in the program. These include a preview of the Experience as well as classroom management strategies to make every Science Experience a success! Common Misconceptions Common misconceptions are listed first in bold type. The subsequent text explains the misconceptions. These misconceptions will be addressed at point of use.

- People are not part of Earth’s spheres. As living things, humans are part of the biosphere. Our actions also impact each of the other spheres.
- Earth’s interior is magma. Earth’s interior is not all molten below the thin crust. Rock in the mantle, while very hot and pliable, is still solid.
- Rock follows a single path in the rock cycle. Rock can take any number of paths through the rock cycle. The rock cycle illustrates all the different ways that rock can change, but not all rock follows the same path through the cycle.

Updated Text: Preview the Topic In this topic, students will differentiate Earth’s spheres, and model and describe its layers and the rock cycle. In Experience 1, students learn to differentiate among the biosphere, hydrosphere, atmosphere, and geosphere and identify how the components of each sphere interact. In Experience 2, they become familiar with Earth’s four layers and describe their different characteristics. Finally, in Experience 3, they explore how sedimentary, metamorphic, and igneous rocks form and change through the rock cycle. Students learned about

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

**Original Text:** Preview the Topic In Experience 1, students learn about temperature and thermal energy and how they are related to each other. In Experience 2, students learn about the three mechanisms of thermal energy transfer into, out of, and within systems—conduction, convection, and radiation. In Experience 3, students explore how thermal energy transfer results in a state of thermal equilibrium in a system. **PREVIEW ANCHORING PHENOMENON** Students observe how hot glass is blown and shaped into a solid, hollow object such as a bottle. They consider the role that thermal energy and the transfer of thermal energy play in the process. **Topic Readiness Test** Students answer questions to show what they already know about thermal energy by completing a printed or online Topic Readiness Test. **Teacher Background** To teach this Topic, you should be familiar with the following concepts: • Kinetic energy is the energy of motion, and it occurs on both the macroscopic and microscopic level. A moving object has kinetic energy, but the particles or molecules that make up the object also have kinetic energy. Thermal energy is the sum of all the kinetic energy of particles in an object or system. • Temperature is a measure of the kinetic energy of the particles in an object. • Thermal energy moves in a predictable pattern from warmer to cooler objects. When particles with a higher kinetic energy encounter particles with less kinetic energy, they transfer some of their energy to the cooler particles. • Thermal energy tends to move in a system until all the objects reach the same temperature, a state known as thermal equilibrium. **Teacher Prep Videos** Watch the Teacher Prep Videos to help you prepare for each Experience in the program. These include a preview of the Experience as well as classroom management strategies to make every Science Experience a success! **Common Misconceptions** Common misconceptions (in bold type) and explanations follow. These misconceptions will be addressed at point of use. • Thermal energy is a kind of matter that moves from place to place. Thermal energy actually moves as kinetic energy of the particles of one material is transferred to another. The particles do not need to change locations. • Cold is the opposite of warmth, and it moves in a similar way. Thermal energy transfer occurs only in one direction. A cold object can cool another but only by absorbing some of the thermal energy of the warmer object. Ice cream chills a bowl by absorbing thermal energy from the bowl. However, some cold things, such as air masses or portions of a body of water, can move within a system due to differences in density. That phenomenon can lead to the perception that cold is something that moves.

**Updated Text:** Preview the Topic In this topic, students will explain the relationship between kinetic energy and temperature and investigate how thermal energy moves. In Experience 1, students learn about temperature and thermal energy and how they are related to each other. In Experience 2, students learn about the three mechanisms of thermal energy transfer into, out of, and within systems—conduction, convection, and radiation. In Experience 3, students explore how thermal energy transfer results in a state of thermal equilibrium in a system. Students learned in Grade 6 that kinetic energy is the energy of motion. They will continue to build their understanding in this topic as they explore kinetic energy at the particle level. **PREVIEW ANCHORING PHENOMENON** Students observe how hot glass is blown and shaped into a solid, hollow object such as a bottle. They consider the role that thermal energy and the transfer of thermal energy play in the process. **Topic Readiness** Students answer questions to show what they already know about thermal energy by completing a printed or online Topic Readiness Test. Remediation is provided for students who struggle with prerequisite concepts. You could also use the Look Back Presentation to remind students of content they learned in prior grades. **Teacher Background** To teach this Topic, you should be familiar with the following concepts: • A moving object has kinetic energy, but the particles or molecules that make up the object also have kinetic energy. Thermal energy is the sum of all the kinetic energy of particles in an object or system. • Temperature is a measure of the kinetic energy of the particles in an object. • Thermal energy moves in a predictable pattern from warmer to cooler objects. • Thermal energy tends to move in a system until all the objects reach the same temperature, a state known as thermal equilibrium. **Teacher Prep Videos** Watch the Teacher Prep Videos to help you prepare for each Experience in the program. Original Text: Preview the Topic In Experience 1, students are introduced to the concepts of continental drift and tectonic plates. They learn about the types of evidence that show how Earth has changed over time. In Experience 2, they discover how plate tectonics results in ocean basin formation and mountain building. They also explore how convection currents cause tectonic plates to move and learn about the types of plate boundaries. In Experience 3, they explore how plate tectonics causes earthquakes. Finally, in Experience 4, they explore how plate tectonics causes volcanic eruptions, including supervolcanoes and hot spots. PREVIEW ANCHORING PHENOMENON Students consider the changes occurring in Iceland, an island country in the North Atlantic Ocean that experiences frequent earthquakes and volcanic activity. Students will model the processes causing Iceland to tear apart. Topic Readiness Test Students answer questions to show what they already know about plate tectonics by completing a printed or online Topic Readiness Test. Teacher Background To teach this content, you should be familiar with the following concepts:

- The theory of continental drift was proposed by a young German scientist named Alfred Wegener in the early 20th century. It is the idea that the continents slowly move over Earth's surface.
- According to the theory of plate tectonics, Earth's surface is broken up into more than a dozen distinct tectonic plates that slowly move in different directions.
- Plate motions and interactions have changed Earth over time. Teacher Prep Videos Watch the Teacher Prep Videos to help you prepare for each Experience in the program. These include a preview of the Experience as well as classroom management strategies to make every Science Experience a success! Common Misconceptions Common misconceptions (in bold type) and explanations follow. These misconceptions will be addressed at point of use.
- Theories are unproven ideas. In science, the term theory is applied only to ideas that are supported by a vast and diverse array of evidence.
- Earth's interior is molten. Knowing that molten lava erupts on the surface and convection currents occur in the mantle, some students may have difficulty understanding that the mantle is solid.
- Tsunamis are tidal waves. Tsunamis are large-scale waves caused by earthquakes under the ocean that raise the ocean floor and displace ocean water above it.
- Volcanoes occur only in

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

hot climates. Students may associate volcanoes only with tropical islands, such as Hawaii. Plate tectonics cause volcanic eruptions, not climate conditions.

Updated Text: Preview the Topic In this topic students will describe the evidence for plate tectonics and the causes and effects of plate tectonics. In Experience 1, students are introduced to the concepts of continental drift and tectonic plates. They learn about the types of evidence that show how Earth has changed over time. In Experience 2, they discover how plate tectonics results in ocean basin formation and mountain building. In Experience 3, they explore how plate tectonics causes earthquakes. Finally, in Experience 4, they explore how plate tectonics causes volcanic eruptions, including supervolcanoes and hot spots. Students learned about convection in Topic 3. In this topic, they will build on that understanding as they explore how convection currents cause tectonic plates to move. PREVIEW ANCHORING PHENOMENON Students consider the changes occurring in Iceland, an island country in the North Atlantic Ocean that experiences frequent earthquakes and volcanic activity. Students will model the processes causing Iceland to tear apart. Topic Readiness Students answer questions to show what they already know about plate tectonics by completing a printed or online Topic Readiness Test. **Original Text:** Preview the Topic In Experience 1, students explore the connection between food chains, food webs, and energy pyramids. They learn how energy is transferred and conserved as it flows through an ecosystem. In Experience 2, they use visuals to learn about the water, carbon and oxygen cycles, and other nutrient cycles. They also investigate how matter is conserved and cycled through an ecosystem. **PREVIEW ANCHORING PHENOMENON** Students will watch a video that describes the various plants and animals that inhabit the Texas Plains. Students will consider the role ocelots play in this ecosystem throughout their life cycle. **Topic Readiness Test** Students answer questions to show what they already know about the flow of energy and the cycling of matter in ecosystems by completing a printed or online Topic Readiness Test. **Teacher Background** To teach the content of this Topic, you should be familiar with these concepts: • A food chain is part of a more complex food web that shows the feeding relationships among the organisms in the ecosystem. • Available energy decreases as you move up the trophic levels. Only 10% of the energy at one level is transferred to the next trophic level. • The laws of conservation of matter and energy are the foundation for the concepts in this Topic. In a closed system, matter and energy cannot be created or destroyed, but can change form. • Water can cycle through the biosphere as a liquid, gas, and solid. Oxygen and carbon dioxide cycle through the biosphere when autotrophs undergo photosynthesis, organisms respire, and during decomposition. Other nutrients, such as nitrogen, phosphorus, and sulfur also cycle through the biosphere. **Teacher Prep Videos** Watch the Teacher Prep Videos to help you prepare for each Experience in the program. These include a preview of the Experience as well as classroom management strategies to make every Science Experience a success! **Common Misconceptions** Common misconceptions (in bold type) and explanations follow. These misconceptions will be addressed at point of use. • Energy accumulates. Students may think that the top of the energy pyramid has the most energy because they think energy accumulates at each trophic level. Emphasize that organisms, including humans, use energy for daily activities, so less energy is transferred to the next level of the energy pyramid. • Plants undergo photosynthesis and animals undergo respiration. Some students may think that plants undergo photosynthesis and not respiration. Clarify that plants undergo photosynthesis to make food.

**Updated Text:** Preview the Topic In this topic students will diagram energy roles and explain the flow of energy and the cycling of matter in ecosystems. In Experience 1, students explore the connection between food chains, food webs, and energy pyramids. They learn how energy is transferred and conserved as it flows through an ecosystem. In Experience 2, they use visuals to learn about the water, carbon and oxygen cycles, and other nutrient cycles. They also investigate how matter is conserved and cycled through an ecosystem. Students learned about the characteristics of organisms in Topic 10. In this topic, they will build on this understanding to learn how the roles of organisms can affect the cycling of matter and the flow of energy. **PREVIEW ANCHORING PHENOMENON** Students will watch a video that describes the various plants and animals that inhabit the Texas Plains. Students will consider the role ocelots play in this ecosystem throughout their life cycle. **Topic Readiness** Students answer questions to show what they already know about the flow of energy and the cycling of matter in ecosystems by completing a printed or online Topic Readiness Test. Remediation is provided for students who struggle with prerequisite concepts. You could also use the Look Back Presentation to remind students of content they learned in prior grades. **Teacher Background** To teach the content of this Topic, you should be familiar with these concepts: • Available energy decreases as you move up the trophic levels. Original Text: Dear Family Member or Caregiver, I am looking forward to helping my students learn about science. Because I know that you want your student to be successful, I offer these suggestions so that you can help them gain proficiency in science. Look through recently completed lessons and be sure to ask lots of questions. One of the best ways for students to check on their learning is to explain it to someone else. Ask about homework assignments and check that they have completed them. Help your student collect materials and information for school activities. Encourage computer literacy. Advise your student to use computers, tablets, or other devices in school or at the library. If you have a home computer, help your student learn to do research online. In Grade 7, your student will be introduced to topics in Physical, Earth, and Life science. Students will learn about force and motion, thermal energy, changes in matter, and

# Proclamation 2024: Report of New Content

solutions. They will explore objects in the solar system, gravity, and the characteristics of Earth that make life possible. They will discover how plate tectonics changes Earth's surface and how human activities impact Earth's water. Finally, students will learn about human body systems, classification, and how matter and energy cycle and flow in and out of ecosystems. I encourage you to stay involved in your student's learning. By all means, visit the classroom during open house or make an appointment with me if you have questions. Cordially, \_\_\_\_\_ Science Teacher

Updated Text: Dear Students and Caregivers, In Grade 7, students will be introduced to topics in Physical, Earth, and Life science. Students will learn about force and motion, thermal energy, changes in matter, and solutions. They will explore objects in the solar system, gravity, and the characteristics of Earth that make life possible. They will discover how plate tectonics changes Earth's surface and how human activities impact Earth's water. Finally, students will learn about human body systems, classification, and how matter and energy cycle and flow in and out of ecosystems. This program uses phenomena, events that students might observe in the world around them, to inspire interest in science and guide inquiry. The design of the instructional materials follows the research-based 5E model. This model has 5 phases: Engage, Explore, Explain, Elaborate, and Evaluate. Following this model, activities are sequenced to support deeper understanding. Caregivers, below are suggestions for you to help your students gain proficiency in science and succeed in this course: Look through recently completed content and be sure to ask lots of questions. Encourage students to explain what they have learned in their own words or in their first language. Ask about homework assignments and check that your student has completed them. Help your student collect materials and information for school activities. Advise your student to use computers, tablets, or other devices in school or at the library. If you have a home computer, help your student do research online. With your help and these strategies, your student can have a fun and successful experience this year! Cordially, \_\_\_\_\_ Science Teacher

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

**Original Text:** Launch the Anchoring Phenomenon Students watch a video that introduces the art of glass blowing, which is still used today to produce functional containers such as bottles and glasses, as well as pieces of art. Throughout the Topic, students will gain knowledge that should help them explain the roles that thermal energy and thermal energy transfer play in the production of glass objects.

**Updated Text:** Launch the Anchoring Phenomenon Students watch a video that introduces the art of glass blowing, which is still used today to produce functional containers such as bottles and glasses, as well as pieces of art. Throughout the Topic, students will gain knowledge that should help them explain the relationship between kinetic energy and temperature and investigate how thermal energy moves and is transferred. In addition, they will be able to explain the roles that thermal energy and thermal energy transfer play in the production of glass objects.

Original Text: Launch the Anchoring Phenomenon Students watch a video that introduces them to the habitat and wildlife in the Texas Plains. The video focuses on how ocelots recycle both matter and energy. Throughout the Topic, students will learn how all organisms are connected in ecosystems and how energy moves throughout the system. They will understand that matter and nutrients are recycled.

Updated Text: Launch the Anchoring Phenomenon Students watch a video that introduces them to the habitat and wildlife in the Texas Plains. The video focuses on how ocelots recycle both matter and energy. Throughout the Topic, students will diagram energy roles and describe the continuous flow of energy and the cycling of matter in ecosystems. In addition, they will also learn how all organisms are connected in ecosystems and how energy moves throughout the Texas Plains ecosystem. They will understand that matter and nutrients are recycled.

Original Text: Preview the Topic In Experience 1, students are introduced to stars and their life cycles. They learn to compare and classify stars using the Hertzsprung-Russell diagram. In Experience 2, they explore galaxies and discover how to categorize them as spiral, elliptical, and irregular. They also locate Earth's solar system within the Milky Way galaxy. Finally, in Experience 3, they explore the origin of the universe, including evidence that supports the Big Bang theory. PREVIEW ANCHORING PHENOMENON Students consider the 2005 discovery and captured image of a distant exploding star. They will complete a Claim-Evidence-Reasoning Chart to explain how astronomers use information and data about an exploding star to learn about the universe. Topic Readiness Test Students answer questions to show what

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

they already know about the universe by completing a printed or online Topic Readiness Test. Teacher Background To teach the content of this Topic, you should be familiar with the following concepts:

- Stars are giant balls of primarily hot hydrogen and helium gas. Astronomers classify stars using the Hertzsprung-Russell diagram. Stars have predictable life cycles, the stages of which are determined by their mass.
- A galaxy is a huge group of stars, dust, gas, planets, and other objects held together by gravity. Our solar system occurs in the Milky Way, a barred spiral galaxy with two main arms and several smaller arms. About 26,000 light-years from the Milky Way's center, our solar system is along the edge of the Orion Arm.
- The universe consists of all of space and everything in it. Evidence for the Big Bang theory and the fact that the universe has been expanding since its formation comes from a phenomenon known as redshift and cosmic microwave background (CMB) radiation. Teacher Prep Videos Watch the Teacher Prep Videos to help you prepare for each Experience in the program. These include a preview of the Experience as well as classroom management strategies to make every Science Experience a success! Common Misconceptions Common misconceptions (in bold type) and explanations follow. These misconceptions will be addressed at point of use.
- Stars are present only at nighttime. Students may not realize that stars are always in the sky, even during the day.
- All galaxies are the same size and shape. Some students may have difficulty understanding that galaxies vary in shape and size.
- Our galaxy and the universe both formed during the Big Bang. Some students may not realize that the oldest galaxies formed after the Big Bang.

Updated Text: Preview the Topic In this topic students will describe the life cycle of stars, categorize galaxies, and analyze evidence used to describe the origin of the universe. In Experience 1, students are introduced to stars and their life cycles. They learn to compare and classify stars using the Hertzsprung-Russell diagram. In Experience 2, they explore galaxies and discover how to categorize them as spiral, elliptical, and irregular. They also locate Earth's solar system within the Milky Way galaxy. Finally, in Experience 3, they explore the origin of the universe, including evidence that supports the Big Bang theory. Students learned about electromagnetic waves in Topic 3. In this topic they will build on that knowledge as they explore concepts related to light and the universe. PREVIEW ANCHORING PHENOMENON Students consider the 2005 captured image of a distant exploding star. They will complete a Claim-Evidence-Reasoning Chart to explain how astronomers use data about an exploding star to learn about the universe. Topic Readiness Students answer questions to show what they already know about the universe by completing a printed or online Topic Readiness Test. Remediation is provided for students who struggle with prerequisite concepts. You could also use the Look Back Presentation to remind students of content they learned in prior grades. Teacher Background To teach the content of this Topic, you should be familiar with the following concepts:

- Stars are giant balls of primarily hot hydrogen and helium gas. Astronomers classify stars using the Hertzsprung-Russell diagram. Stars have predictable life cycles, the stages of which are determined by their mass.
- A galaxy is a huge group of stars, dust, gas, planets, and other objects held together by gravity. Our solar system is found in the Milky Way along the edge of the Orion Arm.
- Evidence for the Big Bang theory and the fact that the universe has been expanding since its formation comes from a phenomenon known as redshift and cosmic microwave background (CMB) radiation. Location: Made changes to Preview the Topic and Topic Readiness heading to address TRR Rubric. Made edits to other areas of the page for fit.

Original Text: Preview the Topic In Experience 1, students are introduced to natural events that can impact global climate. They explore the carbon cycle and become familiar with the use of scientific evidence to describe how volcanic eruptions, meteor impacts, and abrupt changes in ocean currents influence climate. In Experience 2, they explore how human activities, such as the release of greenhouse gases, deforestation, and urbanization, influence climate. PREVIEW ANCHORING PHENOMENON Students consider the increasing size of Glacier Lagoon, which formed over 50 years ago when a glacier started receding from the Atlantic Ocean. Students will consider the processes that are causing the ice to melt more quickly. Topic Readiness Test Students answer questions to show what they know about natural and human influences on climate by completing a printed or online Topic Readiness Test. Teacher Background To teach this Topic, you should be familiar with the following concepts:

- Greenhouse gases include carbon dioxide (CO<sub>2</sub>), water vapor (H<sub>2</sub>O), and methane (CH<sub>4</sub>). They trap some of Earth's heat in a natural process known as the greenhouse effect.
- The carbon cycle is the natural cycle by which carbon moves among Earth's geosphere, hydrosphere, atmosphere, and biosphere.
- Natural events, including volcanic eruptions, meteor impacts, and abrupt changes in ocean currents, influence global climate.
- Human activities influence global climate by increasing the amount of carbon dioxide and other greenhouse gases in the atmosphere.

Teacher Prep Videos Watch the Teacher Prep Videos to help you prepare for each Experience in the program. These include a preview of the Experience as well as classroom management strategies to make every Science Experience a success! Common Misconceptions Common misconceptions (in bold type) and explanations follow. These misconceptions will be addressed at point of use.

- Water vapor is not a greenhouse gas. Some students may think of water vapor as a natural part of air and therefore not a greenhouse gas. Natural events release water and other greenhouse gases into the atmosphere. Water vapor, like carbon dioxide, traps heat in Earth's atmosphere, making it a greenhouse gas.
- All human activity increases atmospheric carbon dioxide levels. Some students may believe that all industrial human activity has a negative influence on the atmosphere and climate. Some carbon dioxide gets cycled back to Earth through the natural processes of the carbon cycle. Earth can assimilate some, but not enough, of the current emissions of carbon dioxide resulting from human activity to prevent an increase in the greenhouse effect.

Updated Text: Preview the Topic In this topic, students will use scientific evidence to describe how natural events and human activities affect climate. In Experience 1, students are introduced to natural events that can impact global climate. They explore the carbon cycle and become familiar with how volcanic eruptions, meteor impacts, and abrupt changes in ocean currents influence climate. In Experience 2, they explore how human activities, such as the release of greenhouse gases, deforestation, and urbanization, influence climate. Students learned in Topic 5 about how the sun, atmosphere, and hydrosphere influence climate. They will build on that knowledge in this topic as they learn about other factors that influence climate. PREVIEW ANCHORING PHENOMENON Students consider the increasing size of Glacier Lagoon, which formed over 50 years ago when a glacier started receding from the Atlantic Ocean. Students will consider the processes that are causing the ice to melt more quickly. Topic Readiness Students answer questions to show what they know about natural and human influences on climate by completing a printed or online Topic Readiness Test. Remediation is provided

Original Text: Preview the Topic In Experience 1, students explain how disruptions such as population changes, natural disasters, and human intervention impact the transfer of energy in food webs. In Experience 2, students describe how primary and secondary succession affect populations and species diversity. In Experience 3, students describe how biodiversity contributes to the stability and sustainability of an ecosystem and the health of its organisms. PREVIEW ANCHORING PHENOMENON Students consider how disruptions like wildfires can interrupt the transfer of energy in food webs. Students will consider ways food webs can recover after a major wildfire like that in Bastrop State Park. Topic Readiness Test Students answer questions to show what they already know about ecosystem disruptions by completing a printed or online Topic Readiness Test. Teacher Background To teach the content of this Topic, you should be familiar with the following concepts:

- An ecosystem is the biosphere unit in which living things (biotic factors) that live in one area interact with the nonliving things (abiotic factors).
- A food web is made of interconnected food chains. Energy transfer is how energy moves along a food chain. When populations change, the pattern of energy transfer in food webs changes.
- Ecological succession is the process in which biodiversity increases in an ecosystem. Primary succession can occur in an area in which no organisms or soil exist. Secondary succession requires soil and some organisms.

Teacher Prep Videos Watch the Teacher Prep Videos to help you prepare for each Experience in the program. These videos include a preview of the Experience as well as classroom management strategies to make every Science Experience a success! Common Misconceptions Common misconceptions are listed first in bold type. The subsequent text explains the misconceptions. These misconceptions will be addressed at point of use.

- Some organisms are not important. Even

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

“pests” are important to an ecosystem. Every organism is part of a food web connected to other food webs. Every population change impacts the transfer of energy within food webs. • Disruptions cause permanent ecosystem damage. Food webs are always being disrupted, but they often recover to some extent. Primary or secondary succession enables recovery. • Extinctions are not a problem. Though extinctions have always happened, the current historically high rate of extinctions is damaging the stability and sustainability of many food webs.

Updated Text: Preview the Topic In this topic, students describe how food webs are disrupted, how populations recover, and the impact of biodiversity on the stability of an ecosystem. In Experience 1, students explain how disruptions such as population changes, natural disasters, and human intervention impact the transfer of energy in food webs. In Experience 2, students describe how primary and secondary succession affect populations and species diversity. In Experience 3, students describe how biodiversity contributes to the stability and sustainability of an ecosystem. Students learned about how variations in populations can impact their ability to survive in Topic 7. They will build on their understanding in this topic as they consider the many ways that ecosystems can change and the impact these changes can have on populations. PREVIEW ANCHORING PHENOMENON Students consider how disruptions like wildfires can interrupt the transfer of energy in food webs. Students will consider ways food webs can recover after a major wildfire like that in Bastrop State Park. Topic Readiness Students answer questions to show what they already know about ecosystem disruptions by completing a printed or online Topic Readiness Test. Remediation is provided for students who struggle with prerequisite concepts. You could also use the Look Back Presentation to remind students of content they learned in prior grades. Teacher Background To teach the content of this Topic, you should be familiar with these concepts: • An ecosystem is the biosphere unit in which living things (biotic factors) that live in one area interact with the nonliving things (abiotic factors). • A food web is made of interconnected food chains. Energy transfer is how energy moves along a food chain. universe. They will also learn about weather and climate, including the factors that influence climate. Finally, students will learn about cell structures, how adaptations can lead to survival of populations, and how changes to ecosystems can affect populations. I encourage you to stay involved in your student's learning. By all means, visit the classroom during open house or make an appointment with me if you have questions. Cordially, \_\_\_\_\_  
Science Teacher

Updated Text: Dear Students and Caregivers, In Grade 8, students will be introduced to topics in Physical, Earth, and Life science. Students will learn about chemical reactions, acceleration, and the electromagnetic spectrum. They will explore the life cycle of stars, the characteristics of galaxies, and theories about the origin of the universe. They will also learn about weather and climate, including the factors that influence climate. Finally, students will learn about cell structures, how adaptations can lead to survival of populations, and how changes to ecosystems can affect populations. This program uses phenomena, events that students might observe in the world around them, to inspire interest in science and guide inquiry. The design of the instructional materials follows the research-based 5E model. This model has 5 phases: Engage, Explore, Explain, Elaborate, and Evaluate. Following this model, activities are sequenced to support deeper understanding. Caregivers, below are suggestions for you to help your students gain proficiency in science and succeed in this course: Look through recently completed content and be sure to ask lots of questions. Encourage students to explain what they have learned in their own words or in their first language. Ask about homework assignments and check that your student has completed them. Help your student collect materials and information for school activities. Advise your student to use computers, tablets, or other devices in school or at the library. If you have a home computer, help your student do research online. With your help and these strategies, your student can have a fun and successful experience this year! Cordially, \_\_\_\_\_

Original Text: Launch the Anchoring Phenomenon Students watch a video that introduces the phenomenon of a growing plant that gains mass over time. Throughout the Topic, students will gain knowledge that should help them explain that during chemical changes, atoms in reactants rearrange to form the atoms that are in products. Sometimes these atoms are in substances that are in a certain state, and sometimes they are in substances that are in other states.

Updated Text: Launch the Anchoring Phenomenon Students watch a video that introduces the phenomenon of a growing plant that gains mass over time. Throughout the Topic, students will gain knowledge that should help them explain how mass is conserved in chemical reactions. In addition, they will relate how the atoms in reactants rearrange to form the atoms that are in products. Sometimes these atoms are in substances that are in a certain state, and sometimes they are in substances that are in other states.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

**Original Text:** Launch the Anchoring Phenomenon Students watch a video that introduces the phenomenon of astronomer Robert Quimby's 2005 discovery of a distant exploding star, or supernova. Throughout the Topic, students will gain knowledge that should help them explain how astronomers use information and data about an exploding star to learn about the universe. Astronomers can measure the redshift of a supernova to determine how fast it is moving away and if the universe has changed since the time of the explosion. Texas Connection A banker from Paris, Texas, who was also an avid science reader, William Johnson McDonald (1844–1926) enjoyed viewing planets from his own small telescope. By the end of his life, he saw fit to provide Texans with a legacy that would provide far more powerful telescopes. Located northwest of Fort Davis, Texas, the McDonald Observatory is a complex of five telescope domes sitting atop Mount Locke and Mount Fowlkes, an ideal area due to its high ratio of clear nights and lack of light pollution. The McDonald Observatory is home to the world's second largest telescope, the Hobby-Eberly Telescope, built in 1970, and it also produces the popular radio show StarDate. Anchoring Phenomenon Video Have students watch the video about astronomer Robert Quimby's discovery of a supernova. Do not explain to students what is happening in the video.

- Ask students to use an outline format to record and organize their observations.
- Have students include in their outline any personal experiences or prior knowledge they have about the phenomenon.
- In a brief class discussion, invite students to share their personal experiences or prior knowledge with the class.
- Prompt students to consider how this phenomenon connects to the engineering design practices. Ask How might Robert Quimby have used information from his discovery? (He could have used information from his discovery to explain the life cycle of stars and how galaxies form.) Throughout the Topic, encourage students to revisit and add to their outlines.

**Updated Text:** Launch the Anchoring Phenomenon Students watch a video that introduces the phenomenon of astronomer Robert Quimby's 2005 discovery of a distant exploding star, or supernova. Throughout the Topic, students will gain knowledge that should help them describe the life cycle of stars, categorize galaxies, and analyze evidence used to describe the origin of the universe. In addition, they will also explain how astronomers use information and data about an exploding star to learn about the universe. Astronomers can measure the redshift of a supernova to determine how fast it is moving away and if the universe has changed since the time of the explosion. Texas Connection A banker from Paris, Texas, William Johnson McDonald (1844–1926) enjoyed viewing planets from his own small telescope. Original Text: Launch the Anchoring Phenomenon Students watch a video that introduces the phenomenon of a glacial lagoon in Iceland that is increasing in size over time as a glacier melts. Throughout the Topic, students will gain knowledge that should help them explain that natural events and human activities affect the climate, which affects how much ice melts from the glacier into the lagoon. A warming climate results in more ice melting from the glacier, which causes the lagoon to increase in size.

Updated Text: Launch the Anchoring Phenomenon Students watch a video that introduces the phenomenon of a glacial lagoon in Iceland that is increasing in size over time as a glacier melts. Throughout the Topic, students will gain knowledge that should help them use scientific evidence to describe how natural events and human activities influence climate. Students will relate how both natural events and human activities can affect how much ice melts from the glacier into the lagoon. A warming climate results in more ice melting from the glacier, which causes the lagoon to increase in size.

Original Text: Launch the Anchoring Phenomenon Students watch a video that shows the phenomenon of wildfires impacting ecosystems. As students complete Topic activities, they will see how disruptions like wildfires can cause extreme damage to ecosystems. Students eventually conclude that even ecosystems that are extremely damaged recover via secondary succession if soil and organisms remain. Students will gain knowledge that will help them to explain how natural disasters impact ecosystems.

Updated Text: Launch the Anchoring Phenomenon Students watch a video that shows the phenomenon of wildfires impacting ecosystems. As students complete Topic activities, they will see how disruptions like wildfires can impact the transfer of energy in food webs which in turn causes damage to ecosystems. Students eventually conclude that even ecosystems that are damaged recover via secondary succession if soil and organisms remain. Students will discover how succession will affect both populations and species diversity after the wildfire (which could be caused by either a natural event or a human event). Students will gain knowledge that will help them to explain how natural disasters impact ecosystems.

Updated Text:

Estimados padres de familia o tutores:

En el tema “Los objetos”, los estudiantes aprenden sobre diferentes objetos y cómo pueden ser clasificados. Las Experiencias en este tema son las siguientes:

- Experiencia 1: Propiedades de los objetos
- Experiencia 2: Clasificar objetos

Primero, en la Experiencia 1, los estudiantes identificarán las propiedades físicas observables de los objetos, tales como la forma, el color, la textura y el material. Luego, en la Experiencia 2, generarán maneras de clasificar objetos con base en sus propiedades físicas.

Los principales TEKS de contenido cubiertos en este tema son los siguientes:

- K.6A: Identificar y anotar las propiedades físicas observables de los objetos, incluyendo forma, color, textura y material, y generar formas para clasificar objetos.

TEKS de prácticas científicas y de ingeniería y de temas y conceptos recurrentes:

- K.1B: Usar prácticas científicas para planificar y llevar a cabo investigaciones descriptivas simples.
- K.1E: Reunir observaciones y medidas como evidencia.
- K.1F: Anotar datos usando imágenes y palabras.
- K.5C: Describir las propiedades de objetos en términos de tamaño relativo (escala) y cantidad relativa.
- K.5E: Identificar formas de energía y propiedades de la materia.

Para iniciar este tema, los estudiantes miran y responden a un corto video del fenómeno de anclaje que muestra una variedad de pequeños objetos que se encuentran sobre una mesa. A medida que avanzan en las dos Experiencias, los estudiantes usarán actividades que los ayudarán a entender mejor y responder a la pregunta del fenómeno de anclaje: ¿Cómo podemos organizar estos objetos?

Una de las mejores maneras para que los estudiantes comprueben lo que han aprendido es explicárselo a otra persona. Pregúntele a su estudiante sobre sus experiencias en la clase y pídale que le explique el contenido que está aprendiendo en la escuela, usando sus propias palabras o su idioma materno, si es necesario.

Las investigaciones han demostrado que a los estudiantes les va mejor en la escuela cuando tienen el apoyo de quienes los rodean. Juntos pueden disfrutar y aprender conceptos científicos interesantes, y al mismo tiempo ayudar a su estudiante en ¡Experimenta las Ciencias!

Cordialmente,

Maestro/Maestra de Ciencias

Updated Text:

Estimados padres de familia o tutores:

En el tema “Los imanes y el movimiento”, los estudiantes aprenderán acerca de cómo un imán puede crear una fuerza que provoca cambios en el movimiento y la posición de algunos objetos de la vida diaria.

Las Experiencias en este tema son las siguientes:

- Experiencia 1: Los imanes
- Experiencia 2: Empujar y jalar

En la Experiencia 1, los estudiantes describirán y predecirán cómo un imán interactúa con diferentes materiales. En la Experiencia 2, los estudiantes usarán imanes para investigar cómo pueden empujar o jalar diferentes objetos.

Los principales TEKS de contenido cubiertos en este tema son los siguientes:

- K.7A: Describir y predecir cómo un imán interactúa con distintos materiales y cómo se pueden usar los imanes para empujar o jalar.

TEKS de prácticas científicas y de ingeniería y de temas y conceptos recurrentes:

- K.1A: Hacer preguntas y definir problemas con base en observaciones o información de textos, fenómenos, modelos o investigaciones.
- K.1E: Reunir observaciones y medidas como evidencia.
- K.3A: Desarrollar explicaciones y proponer soluciones apoyadas en datos y modelos.
- K.5A: Identificar y usar patrones para describir fenómenos o diseñar soluciones.
- K.5B: Investigar y predecir relaciones de causa-efecto en la ciencia.

Para iniciar este tema, los estudiantes miran y responden a un corto video del fenómeno de anclaje que muestra una variedad de materiales que están siendo separados en una planta de reciclaje. A medida que avanzan en las dos Experiencias, los estudiantes usarán actividades que los ayudarán a entender mejor y responder a la pregunta del fenómeno de anclaje: ¿Cuál es la manera más rápida de clasificar estos objetos?

Una de las mejores maneras para que los estudiantes comprueben lo que han aprendido es explicándoselo a otra persona. Pregúntele a su estudiante sobre sus experiencias en la clase y pídale que le explique el contenido que está aprendiendo en la escuela, usando sus propias palabras o su idioma materno, si es necesario.

Estimados padres de familia o tutores:

En el tema “La luz y las sombras”, los estudiantes aprenden que los efectos de la luz se pueden observar en la vida cotidiana.

Las Experiencias en este tema son las siguientes:

- Experiencia 1: La luz
- Experiencia 2: Las sombras

En la Experiencia 1, los estudiantes comunican la idea de que las fuentes de luz, como el sol o una linterna, nos permiten ver, pero los objetos se ven diferentes si los vemos con una luz tenue o una brillante. En la Experiencia 2, los estudiantes demuestran y explican cómo la luz atraviesa algunos objetos, como una ventana o un vidrio, pero es bloqueada por otros objetos, lo que a veces crea una sombra.

Los principales TEKS de contenido cubiertos en este tema son los siguientes:

- K.8A: Comunicar la idea de que los objetos sólo se pueden ver cuando una fuente de luz está presente y comparar los efectos de diferentes cantidades de luz en la apariencia de los objetos.
- K.8B: Demostrar y explicar que la luz viaja a través de algunos objetos y es bloqueada por otros objetos, creando sombras.

TEKS de prácticas científicas y de ingeniería y de temas y conceptos recurrentes:

- K.1E: Reunir observaciones y medidas como evidencia.

Proclamation 2024: Report of New Content (08/25/2023)

Page 1513 of 1830

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

- K.1F: Anotar y organizar datos usando imágenes, números, palabras, símbolos y gráficas simples.
- K.3A: Desarrollar explicaciones y proponer soluciones apoyadas en datos y modelos.
- K.5A: Identificar y usar patrones para describir fenómenos o diseñar soluciones.
- K.5B: Investigar y predecir relaciones de causa-efecto en la ciencia.

Para iniciar este tema, los estudiantes miran y responden a un corto video del fenómeno de anclaje que muestra faroles de papel flotando en un lago. A medida que avanzan en las dos Experiencias, los estudiantes entenderán mejor que los efectos de la luz se pueden observar en la vida diaria, lo que los ayudará a comunicar y demostrar las maneras en que la luz interactúa con diferentes objetos y a responder a la pregunta del fenómeno de anclaje: ¿De qué están hechos los faroles, que nos permite verlos en la oscuridad?

Una de las mejores maneras para que los estudiantes comprueben lo que han aprendido es explicárselo a otra persona. Pregúntele a su estudiante sobre sus experiencias en la clase y pídale que le explique el contenido que está aprendiendo en la escuela, usando sus propias palabras o su idioma materno, si es necesario.

Las investigaciones han demostrado que a los estudiantes les va mejor en la escuela cuando tienen el apoyo de quienes los rodean. Juntos pueden disfrutar y aprender conceptos científicos interesantes, y al mismo tiempo ayudar a su estudiante en ¡Experimenta las Ciencias!

Cordialmente,

Maestro/Maestra de Ciencias

Estimados padres de familia o tutores:

En el tema “Los patrones en el cielo”, los estudiantes exploran los patrones reconocibles en el mundo natural y entre los objetos en el cielo. Además, los estudiantes comprenderán que el mundo natural incluye materiales y sistemas terrestres que pueden ser observados.

Las Experiencias en este tema son las siguientes:

Proclamation 2024: Report of New Content (08/25/2023)

Page 1514 of 1830

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

- Experiencia 1: El cielo
- Experiencia 2: El estado del tiempo
- Experiencia 3: Las estaciones

En la Experiencia 1, los estudiantes observan, describen y dibujan los objetos que ven en el cielo de día y por la noche, e identifican y describen los patrones del día y la noche. Luego, en la Experiencia 2, los estudiantes usan instrumentos meteorológicos para observar, describir y anotar las mediciones del estado del tiempo en el lugar en donde viven. Finalmente, en la Experiencia 3, los estudiantes observan e identifican los diferentes tipos de estados del tiempo que se experimentan comúnmente en cada estación.

Los principales TEKS de contenido cubiertos en este tema son los siguientes:

- K.9A: Identificar, describir y predecir los patrones del día y la noche y sus características observables.
- K.9B: Observar, describir e ilustrar el Sol, la Luna, las estrellas y los objetos en el cielo, tales como las nubes.
- K.10B: Observar y describir cambios en el estado del tiempo de un día a otro y a lo largo de las estaciones del año.
- K.10C: Identificar evidencia que apoye la idea de que el aire está a nuestro alrededor y demostrar que el viento está moviendo el aire usando objetos, tales como una manga de viento, un reguilete o una cinta.

TEKS de prácticas científicas y de ingeniería y de temas y conceptos recurrentes:

- K.1D: Usar herramientas, incluyendo manga de viento, termómetro de demostración, pluviómetro, cintas y objetos de medición no estándar, para observar, medir, probar y comparar.
- K.1F: Anotar y organizar datos usando imágenes, números, palabras, símbolos y gráficas simples.
- K.1G: Desarrollar y usar modelos para representar fenómenos, objetos y procesos, o diseñar un prototipo para una solución a un problema.
- K.5A: Identificar y usar patrones para describir fenómenos o diseñar soluciones.

Para iniciar este tema, los estudiantes miran y responden a un corto video del fenómeno de anclaje que muestra el estado del tiempo en diferentes estaciones. A medida que avanzan en las dos Experiencias, los estudiantes responderán a la pregunta del fenómeno de anclaje: ¿Cómo sabes qué ropa usar?

Una de las mejores maneras para que los estudiantes comprueben lo que han aprendido es explicándoselo a otra persona. Pregúntele a su estudiante sobre sus experiencias en la clase y pídale que le explique el contenido que está aprendiendo en la escuela, usando sus propias palabras o su idioma materno, si es necesario.

Las investigaciones han demostrado que a los estudiantes les va mejor en la escuela cuando tienen el apoyo de quienes los rodean. Juntos pueden disfrutar y aprender conceptos científicos interesantes, y al mismo tiempo ayudar a su estudiante en ¡Experimenta las Ciencias!

Cordialmente,

Maestro/Maestra de Ciencias

Estimados padres de familia o tutores:

En el tema “Las rocas, la tierra y el agua”, los estudiantes aprenden sobre las rocas y otros recursos naturales.

Las Experiencias en este tema son las siguientes:

- Experiencia 1: Las rocas
- Experiencia 2: El uso de los materiales de la tierra

En la Experiencia 1, los estudiantes observan, describen y clasifican rocas según su tamaño, forma, color y textura.

Luego, en la Experiencia 2, observan y dan ejemplos de cómo las personas usan las rocas, la tierra y el agua en la vida cotidiana.

Los principales TEKS de contenido cubiertos en este tema son los siguientes:

- K.10A: Describir y clasificar rocas por sus propiedades observables, como tamaño, forma, color y textura.
- K.11A: Observar y generar ejemplos de usos prácticos de rocas, suelo y agua.

TEKS de prácticas científicas y de ingeniería y de temas y conceptos recurrentes:

- K.3C: Escuchar activamente las explicaciones de otros para participar respetuosamente en la discusión científica.
- K.5C: Describir las propiedades de objetos en términos de tamaño relativo (escala).
- K.5E: Identificar las propiedades de la materia.

Para iniciar este tema, los estudiantes miran y responden a un corto video del fenómeno de anclaje que muestra materiales tales como rocas, arcilla, suelo (o tierra), agua, hormigón y minerales que se usan para hacer objetos como puentes, calles y cerámica. A medida que avanzan en las Experiencias, los estudiantes responderán a la pregunta del fenómeno de anclaje: ¿Dónde crees que conseguimos los materiales para hacer estos objetos?

Una de las mejores maneras para que los estudiantes comprueben lo que han aprendido es explicárselo a otra persona. Pregúntele a su estudiante sobre sus experiencias en la clase y pídale que le explique el contenido que está aprendiendo en la escuela, usando sus propias palabras o su idioma materno, si es necesario.

Las investigaciones han demostrado que a los estudiantes les va mejor en la escuela cuando tienen el apoyo de quienes los rodean. Juntos pueden disfrutar y aprender conceptos científicos interesantes, y al mismo tiempo ayudar a su estudiante en ¡Experimenta las Ciencias!

Original Text: New Content

Updated Text:

Estimados padres de familia o tutores,

En el tema “Las plantas”, los estudiantes aprenden sobre la estructura y las necesidades de las plantas.

Las Experiencias en este tema son las siguientes:

- Experiencia 1: Las partes de las plantas
- Experiencia 2: Las necesidades de las plantas
- Experiencia 3: Los ciclos de vida de las plantas

En la Experiencia 1, los estudiantes identificarán las estructuras y las funciones de las partes de una planta, incluyendo las raíces, los tallos, las hojas, las flores y los frutos. Luego, en la Experiencia 2, los estudiantes observarán, describirán e identificarán cómo las plantas dependen del aire, la luz solar, el agua, los nutrientes de la tierra y el espacio para crecer. Finalmente, en la Experiencia 3, los estudiantes identificarán y anotarán los pasos de un ciclo de vida sencillo de una planta e identificarán y compararán las partes de plantas más jóvenes que se parecen a las partes de su planta progenitora.

Los principales TEKS de contenido cubiertos en este tema son los siguientes:

- K.12A: Observar e identificar que las plantas dependen de aire, luz solar, agua, nutrientes del suelo y espacio para crecer.
- K.13A: Identificar las estructuras de las plantas, incluyendo raíces, tallos, hojas, flores y frutos.
- K.13C: Identificar y anotar los cambios de semilla a plántula, planta, flor y fruto en un ciclo de vida simple de la planta.
- K.13D: Identificar formas en que las plantas jóvenes se parecen a la planta madre.

TEKS de prácticas científicas y de ingeniería y de temas y conceptos recurrentes:

- K.1D: Usar herramientas, incluyendo lupas, lentes de seguridad, cuadernos y vasos de papel pequeños, ejemplos (suelo, semillas y plantas) y modelos del ciclo de vida de una planta, para observar, medir, probar y comparar.
- K.1E: Reunir observaciones y medidas como evidencia.
- K.5B: Investigar y predecir relaciones de causa-efecto en la ciencia.
- K.5F: Describir la relación entre la estructura y el funcionamiento de objetos, organismos y sistemas.

Para iniciar este tema, los estudiantes miran y responden a un corto video del fenómeno de anclaje que muestra la manera en que las plantas que florecen usan características visuales y sensoriales para atraer polinizadores. El video muestra flores que huelen y lucen muy diferente a las de las plantas conocidas. A medida que avanzan en las Experiencias, los estudiantes responderán a la pregunta del fenómeno de anclaje: ¿Por qué las plantas tienen esa apariencia y ese olor?

Una de las mejores maneras para que los estudiantes comprueben lo que han aprendido es explicárselo a otra persona. Pregúntele a su estudiante sobre sus experiencias en la clase y pídale que le explique el contenido que está aprendiendo en la escuela, usando sus propias palabras o su idioma materno, si es necesario.

Las investigaciones han demostrado que a los estudiantes les va mejor en la escuela cuando tienen el apoyo de quienes los rodean. Juntos pueden disfrutar y aprender conceptos científicos interesantes, y al mismo tiempo ayudar a su estudiante en ¡Experimenta las Ciencias!

Estimados padres de familia o tutores:

En el tema “Los animales”, los estudiantes aprenden sobre las necesidades de los animales y las partes de sus cuerpos.

Las Experiencias en este tema son las siguientes:

- Experiencia 1: Las partes de los animales
- Experiencia 2: Las necesidades de los animales

En la Experiencia 1, los estudiantes investigan qué partes de los animales los ayudan a satisfacer sus necesidades. En la Experiencia 2, identifican las necesidades de los animales de aire, alimento, espacio y refugio.

Los principales TEKS de contenido cubiertos en este tema son los siguientes:

- K.12B: Observar e identificar que los animales dependen de aire, agua, comida, espacio y refugio.
- K.13B: Identificar las diferentes estructuras que tienen los animales que les permiten interactuar con su medioambiente, tales como ver, oír, moverse y agarrar objetos.

TEKS de prácticas científicas y de ingeniería y de temas y conceptos recurrentes:

- K.1F: Anotar datos usando palabras.
- K.3B: Comunicar explicaciones de forma individual y colaborativa en una variedad de escenarios.
- K.3C: Escuchar activamente las explicaciones de otros para participar respetuosamente en la discusión científica.
- K.5F: Describir la relación entre la estructura y el funcionamiento de objetos.

Para iniciar este tema, los estudiantes miran y responden a un corto video del fenómeno de anclaje que muestra un pelícano atrapando un pez. A medida que avanzan en las Experiencias, los estudiantes responderán a la pregunta del fenómeno de anclaje: ¿Por qué tiene el pelícano boca y alas grandes?

Una de las mejores maneras para que los estudiantes comprueben lo que han aprendido es explicárselo a otra persona. Pregúntele a su estudiante sobre sus experiencias en la clase y pídale que le explique el contenido que está aprendiendo en la escuela, usando sus propias palabras o su idioma materno, si es necesario.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

SAVVAS Learning tiene como objetivo proporcionar materiales educativos que ayuden a los estudiantes a tener éxito y a adquirir competencias en las ciencias.

La buena instrucción comienza en el salón de clases, pero la participación de los padres y tutores en el aprendizaje de los estudiantes es clave para garantizar su éxito. Las oportunidades de aprendizaje de los estudiantes fuera de la jornada escolar pueden y deben aprovecharse en el salón para ofrecer una experiencia de aprendizaje más robusta. El aprendizaje en el hogar aporta a los estudiantes otra perspectiva, que, cuando se lleva al salón de clases, puede enriquecer el aprendizaje de todos los estudiantes en el aula. Utilice las siguientes estrategias para mejorar su comunicación con los padres o tutores:

- Reparta la carta De la escuela al hogar al inicio de año escolar. Esa carta contiene una descripción general del contenido que se tratará a lo largo del año escolar y describe el diseño del programa y la importancia del modelo de las “5 E” que está basado en los fenómenos. También incluye algunas maneras generales en las que los padres o tutores pueden ayudar a los estudiantes durante todo el año.
- Use la información que se ofrece en las secciones *Emprender experiencias dinámicas (Engage in Dynamic Experiences)*, *Contenido y secuencia (Scope and Sequence)*, *Plan del tema (Topic Planner)* y *Vistazo a la Experiencia (Experience At-A-Glance)* de la Guía del maestro (Teacher Guide) o de la Guía de conversación para el maestro para explicar a los estudiantes y a los padres o tutores el diseño del programa al principio del año escolar.
- Reparta las cartas De la escuela al hogar para los temas entre los padres o tutores al inicio de cada tema. Estas cartas incluyen información sobre lo que los estudiantes aprenderán en el tema, así como ideas para que los padres y tutores apoyen a sus estudiantes.
- Use las secciones *Conexión con el hogar (Home Connections)*, *A nivel local (Take it Local)* y *Colaborar con la comunidad (Collaborate with the Community)* de la Guía del maestro (Teacher Guide) o de la Guía de conversación para el maestro, para que los padres o tutores y la comunidad en general participen y ayuden a los estudiantes a establecer conexiones personales con el contenido.
- Anime a los estudiantes a comentar lo que están aprendiendo en la escuela con sus padres o tutores usando sus propias palabras y su idioma materno, si es necesario.
- Invite a los padres o tutores a mantenerse involucrados en el aprendizaje de sus estudiantes. Asegúrese de comunicarles que agradece sus comentarios y contribuciones, y de que sepan cómo pueden comunicarse con usted. Los padres y los tutores pueden ser una fuente muy valiosa de apoyo para los estudiantes. Esperamos que estas estrategias lo/la ayuden a obtener ese apoyo y a personalizar el aprendizaje de cada estudiante.

Updated Text: Carta de la escuela al hogar para este tema Estimados padres de familia o tutores: En el tema “Los objetos”, los estudiantes aprenden sobre la materia y sus propiedades. Las Experiencias en este tema son las siguientes:

- Experiencia 1: Construir usando partes
- Experiencia 2: Propiedades de los objetos
- Experiencia 3: Cambios a los materiales

En la Experiencia 1, los estudiantes demuestran y explican que un objeto entero es un sistema compuesto de partes organizadas que se pueden desarmar y volver a armar. Luego, en la Experiencia 2, los estudiantes clasifican objetos por propiedades físicas observables tales como la forma, el color y la textura, y atributos como el tamaño y el peso. Finalmente, en la Experiencia 3, los estudiantes explican y predicen cambios en los materiales causados por el calentamiento y el enfriamiento. Los principales TEKS de contenido cubiertos en este tema son los siguientes:

- 1.6A: Clasificar objetos por las propiedades físicas observables, incluyendo forma, color y textura, y atributos, tales como más grande y más pequeño, y más pesado y más liviano.
- 1.6B: Explicar y predecir cambios en los materiales causados por calentamiento y enfriamiento.
- 1.6C: Demostrar y explicar que un objeto completo es un sistema hecho de partes organizadas, tal como un juguete que se puede desarmar y volver a armar.

TEKS de prácticas científicas y de ingeniería y de temas y conceptos recurrentes:

- 1.1A: Hacer preguntas y definir problemas con base en observaciones o información

# Proclamation 2024: Report of New Content

Updated Text: Carta de la escuela al hogar para este tema Estimados padres de familia o tutores: En el tema “El calor provoca cambios”, los estudiantes aprenden sobre cómo el calor provoca cambios. Las Experiencias en este tema son las siguientes: ● Experiencia 1: El calor ● Experiencia 2: Cambios reversibles ● Experiencia 3: Cambios irreversibles En la Experiencia 1, los estudiantes investigan y describen distintas fuentes de calor y los usos del calor en la vida diaria. Luego, en la Experiencia 2, describen cómo algunos de los cambios que produce el calor son reversibles, tales como derretir hielo y volver a congelar el agua. Finalmente, en la Experiencia 3, los estudiantes describirán cómo algunos cambios provocados por el calor son irreversibles, como hornear un pastel. Los principales TEKS de contenido cubiertos en este tema son los siguientes: ● 1.8A: Investigar y describir las aplicaciones del calor en la vida diaria, tales como cocinar alimentos o usar una secadora de ropa. ● 1.8B: Describir cómo algunos cambios causados por el calor pueden revertirse, tales como la mantequilla derretida, y otros cambios no se pueden revertir, tales como cocinar un huevo u hornear un pastel. TEKS de prácticas científicas y de ingeniería y de temas y conceptos recurrentes: ● 1.1B: Usar prácticas científicas para planificar y llevar a cabo investigaciones descriptivas simples y usar prácticas de ingeniería para diseñar soluciones a problemas. ● 1.1E: Reunir observaciones y medidas como evidencia. ● 1.1F: Anotar y organizar datos usando imágenes, números, palabras, símbolos y gráficas simples. ● 1.5B: Investigar y predecir relaciones de causa-efecto en la ciencia. ● 1.5E: Identificar formas de energía y propiedades de la materia. Para iniciar este tema, los estudiantes miran y responden a un corto video del fenómeno de anclaje que muestra cómo se fabrica un crayón con forma de oso al derretir trozos de crayones viejos en un horno. A medida que avanzan en las Experiencias, usarán actividades para apoyar la comprensión y responder a la pregunta del fenómeno de anclaje: ¿Qué necesitas para hacer un crayón con forma de oso? Una de las mejores maneras para que los estudiantes comprueben lo que han aprendido es explicárselo a otra persona. Pregúntele a su estudiante sobre sus experiencias en la clase y pídale que le explique el contenido que está aprendiendo en la escuela, usando sus propias palabras o su idioma materno, si es necesario. Updated Text: Carta de la escuela al hogar para este tema Estimados padres de familia o tutores: En el tema “La fuerza y el movimiento”, los estudiantes aprenden que las fuerzas provocan cambios de movimiento y de posición en la vida diaria. Las Experiencias en este tema son las siguientes: ● Experiencia 1: Empujar y jalar ● Experiencia 2: Rapidez y dirección En la Experiencia 1, los estudiantes explicarán cómo los empujones y jalones pueden iniciar, detener o cambiar la rapidez o la dirección del movimiento de un objeto. Luego, en la Experiencia 2, los estudiantes planearán y llevarán a cabo una investigación descriptiva que prediga cómo los empujones y jalones pueden iniciar, detener o cambiar la rapidez y la dirección del movimiento de un objeto. Los principales TEKS de contenido cubiertos en este tema son los siguientes: ● 1.7A: Explicar cómo empujar y jalar pueden comenzar, detener o cambiar la velocidad o la dirección de un objeto en movimiento. ● 1.7B: Planificar y realizar una investigación descriptiva que prediga cómo empujar y jalar pueden comenzar, detener o cambiar la velocidad o la dirección de un objeto en movimiento. TEKS de prácticas científicas y de ingeniería y de temas y conceptos recurrentes: ● 1.1B: Usar prácticas científicas para planificar y llevar a cabo investigaciones descriptivas simples y usar prácticas de ingeniería para diseñar soluciones a problemas. ● 1.1D: Usar herramientas, incluyendo objetos de medición no estándar para observar, medir, probar y comparar. ● 1.1E: Reunir observaciones y medidas como evidencia. ● 1.3A: Desarrollar explicaciones y proponer soluciones apoyadas en datos y modelos. ● 1.5A: Identificar y use patrones para describir fenómenos o diseñar soluciones. ● 1.5B: Investigar y predecir relaciones de causa-efecto en la ciencia. Para iniciar este tema, los estudiantes miran y responden a un corto video del fenómeno de anclaje que muestra un perro recorriendo una pista de obstáculos. El perro usa una variedad de empujones y jalones para moverse alrededor de los postes y por encima del subibaja. A medida que los estudiantes avanzan en las Experiencias, responderán a la pregunta del fenómeno de anclaje: ¿Cómo puede un perro completar una carrera de obstáculos? Una de las mejores maneras para que los estudiantes comprueben lo que han aprendido es explicándoselo a otra persona. Pregúntele a su estudiante sobre sus experiencias en la clase y pídale que le explique el contenido que está aprendiendo en la escuela, usando sus propias palabras o su idioma materno, si es necesario. Las investigaciones han demostrado que a los estudiantes les va mejor en la escuela cuando tienen el apoyo de quienes los rodean. Juntos pueden disfrutar y aprender conceptos científicos interesantes, y al mismo tiempo ayudar a su estudiante en ¡Experimenta las Ciencias! Cordialmente, \_\_\_\_\_ Maestro/Maestra de Ciencias

del tiempo • Experiencia 2: Las estaciones En la Experiencia 1, los estudiantes describirán y anotarán características observables del estado del tiempo y explicarán cómo este afecta su vida diaria. Luego, en la Experiencia 2, los estudiantes utilizarán lo que vieron en la Experiencia 1 para describir y predecir el patrón de las estaciones del año. Los principales TEKS de contenido cubiertos en este tema son los siguientes: • 1.9A: Describir y predecir los patrones de las estaciones del año, tales como el orden en el que ocurren, y los cambios en la naturaleza. • 1.10D: Describir y anotar las características observables del estado del tiempo, incluyendo calor o frío, despejado o nublado, calmado o ventoso, y lluvioso o helado, y explicar el impacto del estado del tiempo en las decisiones diarias. TEKS de prácticas científicas y de ingeniería y de temas y conceptos recurrentes: • 1.1D: Usar herramientas, incluyendo objetos de medición no estándar para observar, medir, probar y comparar. • 1.1E: Reunir observaciones y medidas como evidencia. • 1.2B: Analizar datos a través de la identificación de características significativas y patrones. • 1.3A: Desarrollar explicaciones y proponer soluciones apoyadas en datos y modelos. • 1.5A: Identificar y usar patrones para describir fenómenos o diseñar soluciones. Para iniciar este tema, los estudiantes miran y responden a un corto video del fenómeno de anclaje que muestra el estado del tiempo del mismo día en dos lugares distintos de Estados Unidos: Houston, Texas, y Minneapolis, Minnesota. Aunque es invierno en ambas ciudades, el estado del tiempo de cada lugar es muy diferente. En Houston, es templado y lluvioso. Ese día en Minneapolis hace mucho frío, y la nieve y el hielo cubren el suelo. A medida que avanzan en las Experiencias, los estudiantes responderán a la pregunta del fenómeno de anclaje: ¿Qué lugar es mejor para hacer un muñeco de nieve: Houston o Minneapolis? Una de las mejores maneras para que los estudiantes comprueben lo que han aprendido es explicárselo a otra persona. Pregúntele a su estudiante sobre sus experiencias en la clase y pídale que le explique el contenido que está aprendiendo en la escuela, usando sus propias palabras o su idioma materno, si es necesario. Las investigaciones han demostrado que a los estudiantes les va mejor en la escuela cuando tienen el apoyo de quienes los rodean. Juntos pueden disfrutar y aprender conceptos científicos interesantes, y al mismo tiempo ayudar a su estudiante en ¡Experimenta las Ciencias! Cordialmente, \_\_\_\_\_ Maestro/Maestra de Ciencias

Updated Text: Carta de la escuela al hogar para este tema Estimados padres de familia o tutores: En el tema “Los materiales de la Tierra”, los estudiantes aprenden sobre los materiales naturales que se encuentran en la Tierra, específicamente rocas, tierra y agua. Las Experiencias en este tema son las siguientes: • Experiencia 1: La tierra • Experiencia 2: El agua • Experiencia 3: El movimiento de los materiales de la Tierra • Experiencia 4: Usar y conservar los materiales de la Tierra En la Experiencia 1, los estudiantes investigan, describen y anotan las diferentes propiedades y componentes del suelo superior, la arcilla y la arena. Luego, en la Experiencia 2, los estudiantes estudian el agua y comparan las propiedades, tales como la salinidad, el color, la claridad, el tamaño y la forma de charcos, estanques, riachuelos, ríos, lagos y océanos. Después, en la Experiencia 3, los estudiantes investigan y describen cómo el agua puede mover partículas de roca y tierra de un lugar a otro. También identifican y describen cómo las plantas, los animales y los seres humanos usan las rocas, la tierra y el agua. Por último, en la Experiencia 4, los estudiantes explican por qué la conservación es importante y describen maneras de conservar el agua y de proteger las fuentes naturales de agua. Los principales TEKS de contenido cubiertos en este tema son los siguientes: • 1.10A: Investigar y documentar las propiedades de una partícula, como tamaño, forma, textura y color, y los componentes de diferentes tipos de suelos, tales como mantillo, arcilla y arena. • 1.10B: Investigar y describir cómo el agua puede mover rocas y partículas de suelo

de un lugar a otro. ● 1.11C: Describir formas de conservar el agua, tales como cerrar el grifo al cepillarse los dientes y proteger las fuentes naturales de agua, tales como mantener la basura fuera de los cuerpos de agua. TEKS de prácticas científicas y de ingeniería y de temas y conceptos recurrentes: ● 1.1D: Usar herramientas, incluyendo lupas, lentes de seguridad, cuadernos, modelos de corriente de agua, muestras de suelo (marga, arena, grava, rocas, y arcilla), semillas, y plantas para observar, medir, probar y comparar. ● 1.5B Investigar y predecir relaciones de causa-efecto en la ciencia. Para iniciar el tema, los estudiantes miran y responden a un video corto del fenómeno de anclaje sobre los castores y cómo las represas que construyen modifican y ayudan a los medioambientes. A medida que avanzan en las Experiencias, los estudiantes responderán a la pregunta del fenómeno de anclaje: ¿Por qué los castores necesitarían recolectar rocas, tierra y partes de árboles? Una de las mejores maneras para que los estudiantes comprueben lo que han aprendido es explicándoselo a otra persona. Pregúntele a su estudiante sobre sus experiencias en la clase y pídale que le explique el contenido que está aprendiendo en la escuela, usando sus propias palabras o su idioma materno, si es necesario. Updated Text: Carta de la escuela al hogar para este tema Estimados padres de familia o tutores: En el tema “Los seres vivos y los medioambientes”, los estudiantes aprenden sobre los seres vivos y sus medioambientes. Las Experiencias en este tema son las siguientes: ● Experiencia 1: Seres vivos y objetos inertes ● Experiencia 2: Medioambientes ● Experiencia 3: Cadenas alimentarias En la Experiencia 1, los estudiantes aprenderán a clasificar los seres vivos y los objetos inertes, ya sea basándose en sus necesidades o su reproducción. Luego, en la Experiencia 2, los estudiantes describirán interacciones y dependencias entre los seres vivos y los objetos inertes en terrarios y acuarios. Finalmente, en la Experiencia 3, los estudiantes identificarán cómo los seres vivos dependen entre sí a través de cadenas alimentarias. Los principales TEKS de contenido cubiertos en este tema son los siguientes: ● 1.12A: Clasificar cosas vivas y objetos inertes en función de si tienen necesidades básicas y producen hijos. ● 1.12B: Describir y anotar ejemplos de interacciones y dependencia entre componentes vivos e inertes en terrarios o acuarios. ● 1.12C: Identificar e ilustrar cómo los organismos vivos dependen unos de otros a través de las cadenas alimenticias. TEKS de prácticas científicas y de ingeniería y de temas y conceptos recurrentes: ● 1.1G: Desarrollar y usar modelos para representar fenómenos, objetos y procesos, o diseñar un prototipo para una solución a un problema. ● 1.3B: Comunicar explicaciones y soluciones de forma individual y colaborativa en una variedad de escenarios y formatos. ● 1.5A: Identificar y usar patrones para describir fenómenos o diseñar soluciones. ● 1.5D: Examinar las partes de un entero para definir o modelar un sistema. Para iniciar este tema, los estudiantes miran y responden a un corto video del fenómeno de anclaje que muestra a personas creando un medioambiente en el océano mediante la construcción de un arrecife con objetos hechos por seres humanos. A medida que avanzan en las Experiencias, los estudiantes usarán actividades para apoyar la comprensión y responderán a la pregunta del fenómeno de anclaje: ¿Por qué se ponen estos bloques de hormigón en el océano? Una de las mejores maneras para que los estudiantes comprueben lo que han aprendido es explicándoselo a otra persona. Pregúntele a su estudiante sobre sus experiencias en la clase y pídale que le explique el contenido que está aprendiendo en la escuela, usando sus propias palabras o su idioma materno, si es necesario. Updated Text: Carta de la escuela al hogar para este tema Estimados padres de familia o tutores: En el tema “Los animales”, los estudiantes aprenden sobre los animales y sobre las estructuras externas de las aves, los mamíferos y los peces; sobre cómo crecen y cambian los animales y sobre cómo los animales pasan por las etapas del ciclo de vida. Las Experiencias en este tema son las siguientes: ● Experiencia 1: Las estructuras de los animales ● Experiencia 2: Padres y crías ● Experiencia 3: Los ciclos de vida de los animales Primero, en la Experiencia 1, los estudiantes compararán cómo las estructuras externas de distintos animales los ayudan a vivir, interactuar y sobrevivir en su medioambiente. Luego, en la Experiencia 2, identificarán y observarán las maneras en las que las crías se parecen a sus padres. Por último, en la Experiencia 3, los estudiantes anotarán las observaciones y describirán el ciclo de vida básico de un ave, un mamífero y un pez. Las Experiencias en este tema son las siguientes: ● 1.13A: Identificar las estructuras externas de distintos animales y comparar cómo esas estructuras ayudan a distintos animales a vivir, moverse y satisfacer las necesidades básicas para sobrevivir. ● 1.13B: Anotar observaciones y describir los ciclos de vida básicos de animales, incluyendo un ave, un mamífero y un pez. ● 1.13C: Comparar las formas en que los animales jóvenes se parecen a sus padres. TEKS de prácticas científicas y de ingeniería y de temas y conceptos recurrentes: ● 1.1D: Usar herramientas, incluyendo modelos del ciclo de vida de un animal, para observar y comparar. ● 1.3B: Comunicar explicaciones y soluciones de forma individual y colaborativa en una variedad de escenarios y formatos. ● 1.5D: Examinar las partes de un entero para definir o modelar un sistema. ● 1.5F: Describir la relación entre la estructura y el funcionamiento de objetos, organismos y sistemas. Para iniciar este tema, los estudiantes miran y responden a un corto video del fenómeno de anclaje sobre los armadillos y cómo las partes de su cuerpo los ayudan a moverse, encontrar alimento y sobrevivir en su medioambiente. A medida que avanzan en las Experiencias, responderán a la pregunta del fenómeno de anclaje: ¿Qué puede hacer un armadillo con su cuerpo? Una de las mejores maneras para que los estudiantes comprueben lo que han aprendido es explicándoselo a otra persona. Pregúntele a su estudiante sobre sus experiencias en la clase y pídale que le explique el contenido que está aprendiendo en la escuela, usando sus propias palabras o su idioma materno, si es necesario. Updated Text: Guía de comunicación entre la escuela y el hogar SAVVAS Learning tiene como objetivo proporcionar materiales educativos que ayuden a los estudiantes a tener éxito y a adquirir competencias en las ciencias. La buena instrucción comienza en el salón de clases, pero la participación de los padres y tutores en el aprendizaje de los estudiantes es clave para garantizar su éxito. Las oportunidades de aprendizaje de los estudiantes fuera de la jornada escolar pueden y deben aprovecharse en el salón para ofrecer una experiencia de aprendizaje más robusta. El aprendizaje en el hogar aporta a los estudiantes otra perspectiva, que, cuando se lleva al salón de clases, puede enriquecer el aprendizaje de todos los estudiantes en el aula. Utilice las siguientes estrategias para mejorar su comunicación con los padres o tutores:

- Reparta la carta De la escuela al hogar al inicio de año escolar. Esa carta contiene una descripción general del contenido que se tratará a lo largo del año escolar y describe el diseño del programa y la importancia del modelo de las "5 E" que está basado en los fenómenos. También incluye algunas maneras generales en las que los padres o tutores pueden ayudar a los estudiantes durante todo el año.
- Use la información que se ofrece en las secciones *Emprender experiencias dinámicas (Engage in Dynamic Experiences)*, *Contenido y secuencia (Scope and Sequence)*, *Plan del tema (Topic Planner)* y *Vistazo a la Experiencia (Experience At-A-Glance)* de la Guía del maestro (Teacher Guide) o de la Guía de conversación para el maestro para explicar a los estudiantes y a los padres o tutores el diseño del programa al principio del año escolar.
- Reparta las cartas De la escuela al hogar para los temas entre los padres o tutores al inicio de cada tema. Estas cartas incluyen información sobre lo que los estudiantes aprenderán en el tema, así como ideas para que los padres y tutores apoyen a sus estudiantes.
- Use las secciones *Conexión con el hogar (Home Connections)*, *A nivel local (Take it Local)* y *Colaborar con la comunidad (Collaborate with the Community)* de la Guía del maestro (Teacher Guide) o de la Guía de conversación para el maestro, para que los padres o tutores y la comunidad en general participen y ayuden a los estudiantes a establecer conexiones personales con el contenido.
- Anime a los estudiantes a comentar lo que están aprendiendo en la escuela con sus padres o tutores usando sus propias palabras y su idioma materno, si es necesario.
- Invite a los padres o tutores a mantenerse involucrados en el aprendizaje de sus estudiantes. Asegúrese de comunicarles que agradece sus comentarios y contribuciones, y de que sepan cómo pueden comunicarse con usted. Los padres y los tutores pueden ser una fuente muy valiosa de apoyo para los estudiantes. Esperamos que estas estrategias lo/la ayuden a obtener ese apoyo y a personalizar el aprendizaje de cada estudiante.

Updated Text: Carta de la escuela al hogar para este tema Estimados padres de familia o tutores: En el tema “Patrones en el cielo”, los estudiantes aprenden que en el mundo natural existen patrones reconocibles que pueden observarse a través de sistemas y procesos. Las Experiencias en este tema son las siguientes: ● Experiencia 1: El Sol y la Luna ● Experiencia 2: El estado del tiempo ● Experiencia 3: Fenómenos de tiempo severos En la Experiencia 1, los estudiantes describen al Sol como una estrella y reconocen que la Luna refleja la luz del Sol. Luego, en la Experiencia 2, miden, anotan y grafican información meteorológica. Finalmente, en la Experiencia 3, investigan distintos fenómenos de tiempo severos y explican que cada uno es más frecuente en determinadas partes de los Estados Unidos. Los principales TEKS de contenido cubiertos en este tema son los siguientes: ● 2.9A Describir al Sol como una estrella que proporciona luz y calor, y explicar que la Luna refleja la luz del Sol. ● 2.9B Observar los objetos en el cielo usando herramientas, tales como un telescopio, y comparar cómo los objetos en el cielo son más visibles y pueden parecer diferentes con la herramienta que cuando se miran sin ayuda. ● 2.10B Medir, anotar y graficar información meteorológica, incluida la temperatura y la precipitación. ● 2.10C Investigar diferentes tipos de eventos meteorológicos severos, tales como un huracán, tornado o inundación, y explicar que algunos eventos son más probables que otros en una región determinada. TEKS de prácticas científicas y de ingeniería y de temas y conceptos recurrentes: ● 2.1F Anotar y organizar datos usando imágenes, números, palabras, símbolos y gráficas simples. ● 2.2B Analizar datos a través de la identificación de características y patrones significativos. ● 2.5B Investigar y predecir relaciones de causa-efecto en la ciencia. Para iniciar este tema, los estudiantes miran y responden a un corto video de fenómeno de anclaje en el cual se observa cómo va cambiando el estado del tiempo en una ruta. A medida que los estudiantes avanzan en las Experiencias, usarán actividades que les ayuden a comprender el sentido y responder a la pregunta del fenómeno de anclaje: ¿Cómo cambia el estado del tiempo? Una de las mejores maneras para que los estudiantes comprueben lo que han aprendido es explicándoselo a otra persona. Pregúntele a su estudiante sobre sus experiencias en la clase y pídale que le explique el contenido que está aprendiendo en la escuela, usando sus propias palabras o su idioma materno, si es necesario. Updated Text: Carta de la escuela al hogar para este tema Estimados padres de familia o tutores: En el tema “Los recursos de la Tierra”, los estudiantes aprenden sobre los recursos de la Tierra. Las Experiencias en este tema son las siguientes: ● Experiencia 1: El movimiento de los materiales de la Tierra ● Experiencia 2: Los recursos ● Experiencia 3: La protección de los recursos En la Experiencia 1, los estudiantes investigan la manera en que el movimiento del agua y el viento pueden cambiar la superficie de la Tierra. A continuación, en la Experiencia 2, distinguen entre los recursos naturales y los recursos creados por los seres humanos. Finalmente, en la Experiencia 3, reconocen que las personas influyen en los recursos y que los recursos se pueden conservar por medio de la reutilización y el reciclaje. Los principales TEKS de contenido cubiertos en este tema son los siguientes: ● 2.10A Investigar y describir cómo el viento y el agua mueven suelo y partículas de roca a través de la superficie terrestre, tales como el viento que sopla arena creando dunas en una playa o un río que arrastra rocas a medida que fluye. ● 2.11A Distinguir entre recursos naturales y los creados por el hombre. ● 2.11B Describir cómo se puede limitar el impacto humano tomando decisiones para conservar y desechar adecuadamente los materiales, tales como reduciendo su uso, reutilizando o reciclando papel, plástico y metal. TEKS de prácticas científicas y de ingeniería y de temas y conceptos recurrentes: ● 2.1G Desarrollar y usar modelos para representar fenómenos, objetos y procesos. ● 2.4A Explicar cómo la ciencia o una innovación pueden ayudar a otros. ● 2.5B Investigar relaciones de causa-efecto en la ciencia. Para iniciar este tema, los estudiantes miran y responden a un corto video de fenómeno de anclaje sobre la formación rocosa del Faro en el Cañón de Palo Duro, en Texas. A medida que los estudiantes avanzan en las Experiencias, responderán a la pregunta del fenómeno de anclaje: ¿Cómo obtuvo su forma Faro Rock? Una de las mejores maneras para que los estudiantes comprueben lo que han aprendido es explicárselo a otra persona. Pregúntele a su estudiante sobre sus experiencias en la clase y pídale que le explique el contenido que está aprendiendo en la escuela, usando sus propias palabras o su idioma materno, si es necesario. Updated Text: Carta de la escuela al hogar para este tema Estimados padres de familia o tutores: En el tema “La materia”, los estudiantes aprenden sobre la materia y sus propiedades. Las Experiencias en este tema son las siguientes: ●

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Experiencia 1: Propiedades de la materia • Experiencia 2: Cambios en la materia • Experiencia 3: Combinación de la materia En la Experiencia 1, los estudiantes investigan las propiedades de la materia, incluyendo la textura, la flexibilidad y la temperatura. En la Experiencia 2, investigan los cambios en la materia a través de procesos como cortar, doblar, lijar, derretir y congelar. En la Experiencia 3, demuestran que la materia puede estar formada por objetos que, a su vez, están constituidos por unidades más pequeñas, y que esas unidades pueden combinarse o reensamblarse para formar nuevos objetos con distintos fines. También explican por qué los materiales se eligen en función de sus propiedades físicas. Los principales TEKS de contenido cubiertos en este tema son los siguientes: • 2.6A Clasificar la materia por las propiedades físicas observables, incluyendo textura, flexibilidad y temperatura relativa, e identificar si un material es sólido o líquido. • 2.6B Realizar una investigación descriptiva para explicar cómo se pueden cambiar las propiedades físicas a través de procesos, tales como cortar, doblar, lijar, derretir o congelar. • 2.6C Demostrar que unidades pequeñas, tales como los bloques de construcción, se pueden combinar o volver a armar para formar nuevos objetos con diferentes propósitos y explicar los materiales elegidos en función de sus propiedades físicas. TEKS de prácticas científicas y de ingeniería y de temas y conceptos recurrentes: • 2.1B Usar prácticas científicas para planificar y llevar a cabo investigaciones descriptivas simples. • 2.2B Analizar datos a través de la identificación de características y patrones significativos. • 2.2D Evaluar un diseño u objeto usando criterios para determinar si funciona según lo previsto. • 2.5C Medir y describir las propiedades de objetos en términos de tamaño y cantidad. Para iniciar este tema, los estudiantes miran y responden a un corto video de fenómeno de anclaje sobre la elaboración de chocolates en el hogar. A medida que los estudiantes avanzan en las Experiencias, responderán a la pregunta del fenómeno de anclaje: ¿Cómo cambian las propiedades de este chocolate? Una de las mejores maneras para que los estudiantes comprueben lo que han aprendido es explicándoselo a otra persona. Pregúntele a su estudiante sobre sus experiencias en la clase y pídale que le explique el contenido que está aprendiendo en la escuela, usando sus propias palabras o su idioma materno, si es necesario. Las investigaciones han demostrado que a los estudiantes les va mejor en la escuela cuando tienen el apoyo de quienes los rodean. Juntos pueden disfrutar y aprender conceptos científicos interesantes, y al mismo tiempo ayudar a su estudiante en ¡Experimenta las Ciencias! Cordialmente, \_\_\_\_\_ Maestro/Maestra de Ciencias

Updated Text: Carta de la escuela al hogar para este tema Estimados padres de familia o tutores: En el tema “Las plantas y los animales”, los estudiantes aprenden sobre las estructuras de las plantas y los animales que los ayudan a interactuar y sobrevivir en sus medioambientes. Las Experiencias en este tema son las siguientes: • Experiencia 1: Las plantas • Experiencia 2: Los animales • Experiencia 3: Los ciclos de vida de los animales En la Experiencia 1, los estudiantes identificarán las raíces, los tallos, las hojas, las flores, los frutos y las semillas de las plantas y compararán cómo estas estructuras ayudan a diferentes plantas a satisfacer sus necesidades básicas para la supervivencia. En la Experiencia 2, aprenderán sobre y compararán cómo las estructuras y los comportamientos de los animales les permiten encontrar y consumir alimento, agua y aire, y explorarán cómo ser parte de un grupo los ayuda a conseguir alimento, defenderse del peligro y afrontar cambios. Finalmente, en la Experiencia 3, explorarán el ciclo de vida de las ranas y las mariposas. Los principales TEKS de contenido cubiertos en este tema son los siguientes: • 2.13A Identificar raíces, tallos, hojas, flores, frutos y semillas de las plantas y comparar cómo estas estructuras ayudan a las distintas plantas a satisfacer sus necesidades básicas para sobrevivir. • 2.13B Anotar y comparar cómo las estructuras y comportamientos de los animales les ayudan a encontrar y consumir alimentos, agua y aire. • 2.13C Anotar y comparar cómo ser parte de un grupo ayuda a

los animales a obtener alimentos, defenderse y superar cambios. ● 2.13D Investigar y describir algunos de los ciclos de vida únicos de los animales donde los animales jóvenes no se parecen a sus padres, incluyendo mariposas y ranas. TEKS de prácticas científicas y de ingeniería y de temas y conceptos recurrentes: ● 2.2A Identificar ventajas y limitaciones básicas de modelos, tales como su tamaño, propiedades y materiales. ● 2.3A Desarrollar explicaciones apoyadas en datos y modelos. ● 2.5A Identificar y usar patrones para describir fenómenos. ● 2.5D Examinar las partes de un entero para definir o modelar un sistema. ● 2.5F Describir la relación entre la estructura y el funcionamiento de objetos. Para iniciar este tema, los estudiantes miran y responden a un corto video de fenómeno de anclaje en el que se ve cómo interactúan las abejas y las plantas y cómo se comunican las abejas para obtener comida. De esta manera, los estudiantes exploran las diferentes partes de las plantas y los animales y la forma en que los animales se benefician al vivir en grupos. A medida que los estudiantes avanzan en las Experiencias, responderán a la pregunta del fenómeno de anclaje: ¿Cómo le ayuda a una abeja a sobrevivir ser parte de una colmena? Una de las mejores maneras para que los estudiantes comprueben lo que han aprendido es explicándoselo a otra persona. Pregúntele a su estudiante sobre sus experiencias en la clase y pídale que le explique el contenido que está aprendiendo en la escuela, usando sus propias palabras o su idioma materno, si es necesario. Updated Text: Carta de la escuela al hogar para este tema Estimados padres de familia o tutores: En el tema “Organismos y medioambientes”, los estudiantes aprenden sobre cómo los organismos interactúan unos con otros y con su medioambiente. Las Experiencias en este tema son las siguientes: ● Experiencia 1: Medioambientes ● Experiencia 2: Los seres vivos en sus medioambientes ● Experiencia 3: Cadenas alimentarias En la Experiencia 1, los estudiantes identifican diferencias de distintos medioambientes y describen de qué manera las características físicas de un medioambiente sustentan la flora y fauna de un ecosistema. En la Experiencia 2, explican y demuestran de qué manera algunas plantas dependen de otros seres vivos, del viento o del agua para la polinización y la dispersión de sus semillas. Por último, en la Experiencia 3, describen el propósito del modelo de la cadena alimentaria, identifican a los productores y los consumidores dentro de la cadena y luego crean sus propias cadenas alimentarias para demostrar de qué manera los animales dependen de otros seres vivos. Los principales TEKS de contenido cubiertos en este tema son los siguientes: ● 2.12A Describir cómo las características físicas de los medioambientes, incluyendo la cantidad de lluvia, sostienen a plantas y animales dentro de un ecosistema. ● 2.12B Crear y describir cadenas alimenticias que identifiquen a productores y consumidores para demostrar cómo los animales dependen de otros seres vivos. ● 2.12C Explicar y demostrar cómo algunas plantas dependen de otros seres vivos, del viento o del agua para la polinización y para dispersar sus semillas. TEKS de prácticas científicas y de ingeniería y de temas y conceptos recurrentes: ● 2.1G Desarrollar modelos para representar fenómenos y/o procesos. ● 2.3A Desarrollar explicaciones y proponer soluciones apoyadas en datos y modelos. ● 2.5A Identificar y usar patrones para describir fenómenos. ● 2.5D Examinar las partes de un entero para definir o modelar un sistema. Para iniciar este tema, los estudiantes miran y responden a un corto video de fenómeno de anclaje sobre cómo el nopal es importante para los animales que viven en el desierto. A medida que los estudiantes avanzan en las Experiencias, responderán a la pregunta del fenómeno de anclaje: ¿Cómo ayuda un nopal al

Updated Text: Guía de comunicación entre la escuela y el hogar SAVVAS Learning tiene como objetivo proporcionar materiales educativos que ayuden a los estudiantes a tener éxito y a adquirir competencias en las ciencias. La buena instrucción comienza en el salón de clases, pero la participación de los padres y tutores en el aprendizaje de los estudiantes es clave para garantizar su éxito. Las oportunidades de aprendizaje de los estudiantes fuera de la jornada escolar pueden y deben aprovecharse en el salón para ofrecer una experiencia de aprendizaje más robusta. El aprendizaje en el hogar aporta a los estudiantes otra perspectiva, que, cuando se lleva al salón de clases, puede enriquecer el aprendizaje de todos los estudiantes en el aula. Utilice las siguientes estrategias para mejorar su comunicación con los padres o tutores: • Reparta la carta De la escuela al hogar al inicio de año escolar. Esa carta contiene una descripción general del contenido que se tratará a lo largo del año escolar y describe el diseño del programa y la importancia del modelo de las “5 E” que está basado en los fenómenos. También incluye algunas maneras generales en las que los padres o tutores pueden ayudar a los estudiantes durante todo el año. • Use la información que se ofrece en las secciones Emprender experiencias dinámicas (Engage in Dynamic Experiences), Contenido y secuencia (Scope and Sequence), Plan del tema (Topic Planner) y Vistazo a la Experiencia (Experience At-A-Glance) de la Guía del maestro (Teacher Guide) o de la Guía de conversación para el maestro para explicar a los estudiantes y a los padres o tutores el diseño del programa al principio del año escolar. • Reparta las cartas De la escuela al hogar para los temas entre los padres o tutores al inicio de cada tema. Estas cartas incluyen información sobre lo que los estudiantes aprenderán en el tema, así como ideas para que los padres y tutores apoyen a sus estudiantes. • Use las secciones Conexión con el hogar

(Home Connections), A nivel local (Take it Local) y Colaborar con la comunidad (Collaborate with the Community) de la Guía del maestro (Teacher Guide) o de la Guía de conversación para el maestro, para que los padres o tutores y la comunidad en general participen y ayuden a los estudiantes a establecer conexiones personales con el contenido. • Anime a los estudiantes a comentar lo que están aprendiendo en la escuela con sus padres o tutores usando sus propias palabras y su idioma materno, si es necesario. • Invite a los padres o tutores a mantenerse involucrados en el aprendizaje de sus estudiantes. Asegúrese de comunicarles que agradece sus comentarios y contribuciones, y de que sepan cómo pueden comunicarse con usted. Los padres y los tutores pueden ser una fuente muy valiosa de apoyo para los estudiantes. Esperamos que estas estrategias lo/la ayuden a obtener ese apoyo y a personalizar el aprendizaje de cada estudiante.

Original Text: New Slide 26. Note that the following slides will change by one number through the end of the presentation. Change made to a shared G3–G5 component, based on a citation rejected for G4, TEKS 3.B.v.

Updated Text: Slide 26 Comunicar en una variedad de escenarios Los científicos e ingenieros comunican sus explicaciones y soluciones de manera individual y de manera colaborativa en una variedad de escenarios. Pueden hacer presentaciones a sus colegas o al público general de manera individual. Pueden colaborar con otros científicos en estas presentaciones. ¿Cuáles son algunos de los escenarios en los que pueden comunicar una explicación o una solución? Teacher Support Comunicar en una variedad de escenarios Apoyo para el maestro Explique que los estudiantes se comunican en una variedad de escenarios a diario. Hablan con sus compañeros en la escuela, con sus compañeros de equipo en una práctica deportiva, y con adultos en sus hogares. Muestre la siguiente diapositiva. Léala con la clase. Discusión Pida a los estudiantes que piensen cómo comunican información en la escuela en comparación con cómo lo hacen en sus hogares. Pregunte: Cuando comunican información en la escuela, ¿lo hacen de la misma manera en que lo hacen en sus hogares? Expliquen su respuesta. Ejemplo de respuesta: A veces, la manera en que comunico información en la escuela es diferente de cómo lo hago en mi hogar. En la escuela, doy respuestas más formales que las respuestas que doy en mi hogar. Explique a los estudiantes que los científicos y los ingenieros también trabajan juntos, o se colaboran entre ellos. Pida a los estudiantes que piensen sobre la última vez que trabajaron juntos en un proyecto en la escuela y lo comparen con jugar un juego con un amigo. Pregunte: ¿Cómo se comunicaron durante el proyecto en la escuela en comparación con cómo lo hicieron durante el juego con un amigo? Los estudiantes quizá respondan que se comunicaron de estilos diferentes al presentar un proyecto o planificar un juego con sus compañeros de equipo durante un partido. También pueden decir que tuvieron que hablar en voz baja durante la clase, en diferencia a lo que hicieron durante el juego. Recuerde a los estudiantes que cuando otras personas están comunicando sus ideas es importante escucharlas activamente. Y que también es importante que sean respetuosos entre compañeros durante las discusiones en la clase.

3.6A Medir, poner a prueba y anotar las propiedades físicas de la materia, incluyendo temperatura, masa, magnetismo y la habilidad de hundirse o flotar en el agua. ● 3.6B Describir y clasificar muestras de materia en cuanto a sólidos, líquidos y gases, y demostrar que los sólidos tienen una forma definida y que los líquidos y gases toman la forma de su recipiente. ● 3.6C Predecir, observar y anotar los cambios en el estado de la materia causados por calentamiento o enfriamiento en una variedad de sustancias, tales como el hielo que se convierte en agua líquida, la condensación que se forma en el exterior de un vaso o el agua líquida que se calienta hasta el punto de convertirse en vapor de agua (gas). ● 3.6D Demostrar que los materiales se pueden combinar con base en sus propiedades físicas para crear o modificar objetos, tales como la construcción de una torre o la adición de arcilla a la arena para hacer un ladrillo más fuerte y justificar la selección de los materiales con base en sus propiedades físicas. TEKS de prácticas científicas y de ingeniería y de temas y conceptos recurrentes: ● 3.2D Evaluar un diseño u objeto usando criterios. ● 3.5B Identificar e investigar relaciones de causa-efecto para explicar fenómenos científicos o analizar problemas. Para iniciar este tema, los estudiantes miran y responden a un video corto del fenómeno de anclaje que muestra cómo se hace helado con nitrógeno líquido. Observarán cómo la crema líquida se convierte en un sólido cuando se combina con nitrógeno líquido. A medida que los estudiantes avanzan a lo largo de las Experiencias, usarán actividades de creación de sentido que los ayudarán a responder a la pregunta del fenómeno de anclaje, ¿Cómo puedes hacer helado en un instante? Una de las mejores maneras para que los estudiantes comprueben lo que han aprendido es explicándoselo a otra persona. Pregúntele a su estudiante sobre sus experiencias en la clase y pídale que le explique el contenido que está aprendiendo en la escuela, usando sus propias palabras o su idioma materno, si es necesario. Las investigaciones han demostrado que a los estudiantes les va mejor en la escuela cuando tienen el apoyo de quienes los rodean. Updated Text: Carta de la escuela al hogar para este tema Estimados padres de familia o tutores: En este tema, “Patrones en la Tierra”, los estudiantes aprenden sobre los patrones de las condiciones del tiempo, la estructura de la Tierra y la importancia de los recursos naturales. Las experiencias en este tema son las siguientes: ● Experiencia 1: El estado del tiempo ● Experiencia 2: Cambios lentos en la Tierra ● Experiencia 3: Cambios rápidos en la Tierra ● Experiencia 4: Los recursos naturales y la conservación Primero, en la Experiencia 1, los estudiantes medirán y compararán las condiciones del estado del tiempo. A continuación, en la Experiencia 2, describirán cómo se forma el suelo mediante la meteorización y la descomposición. Luego, en la Experiencia 3, explorarán los cambios rápidos de la Tierra. Finalmente, en la Experiencia 4, explicarán cómo las personas usan los recursos y la importancia de la conservación de los recursos. Los principales TEKS de contenido cubiertos en este tema son los siguientes: ● 3.10A Comparar y describir los cambios diarios del estado del tiempo en distintos lugares al mismo tiempo, incluyendo temperatura del aire, dirección del viento y precipitación. ● 3.10B Investigar y explicar cómo los suelos, tales como la arena y la arcilla, se forman por la meteorización de la roca y por la descomposición de restos de plantas y animales. ● 3.11A Explorar y explicar cómo los seres humanos usan los recursos naturales, tales como en la construcción, en la agricultura, en el transporte y en la fabricación de productos. TEKS de prácticas científicas y de ingeniería y de temas y conceptos recurrentes: ● 3.1A Hacer preguntas y definir problemas con base en observaciones o información de textos, fenómenos, modelos o investigaciones. ● 3.1F Elaborar organizadores gráficos apropiados para reunir datos. ● 3.5A Identificar y usar patrones para explicar fenómenos científicos o para diseñar soluciones. Para iniciar este tema, los estudiantes miran y responden a un video corto del fenómeno de anclaje sobre volcanes en Islandia. Explorarán las diferentes formas en que los volcanes cambian la superficie de la Tierra. A medida que los estudiantes avanzan a lo largo de las experiencias, usarán actividades que tengan sentido y ayuden a responder a la pregunta del fenómeno de anclaje: ¿De qué manera los volcanes cambian la superficie de la Tierra? Una de las mejores maneras para que los estudiantes comprueben lo que han aprendido es explicárselo a otra persona. Pregúntele a su estudiante sobre sus experiencias en la clase y pídale que le explique el contenido que está aprendiendo en la escuela, usando sus propias palabras o su idioma materno, si es necesario. Updated Text: Carta de la escuela al hogar para este tema Estimados padres de familia o tutores: En este tema, “Las interacciones en los ecosistemas”, los estudiantes aprenden sobre los ecosistemas mientras exploran patrones, ciclos, sistemas y relaciones dentro de los ecosistemas. Las experiencias en este tema son las siguientes: ● Experiencia 1: Los organismos en los ecosistemas ● Experiencia 2: La energía en los ecosistemas ● Experiencia 3: Cambios en los ecosistemas ● Experiencia 4: Los fósiles En la Experiencia 1, explican cómo la temperatura y la precipitación afectan el crecimiento y el comportamiento animal y las respuestas de las plantas. En la Experiencia 2, describen el flujo de energía en una cadena alimentaria, y predicen cómo los cambios en una cadena alimentaria afectan al ecosistema. En la Experiencia 3, los estudiantes describen cómo los cambios naturales al ecosistema pueden ocasionar que los organismos

Proclamation 2024: Report of New Content (08/25/2023)

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

prosperen, perezcan o cambien de ubicación. Finalmente, en la Experiencia 4, los estudiantes identifican fósiles como evidencia de organismos vivos del pasado y sus medioambientes. Los principales TEKS de contenido cubiertos en este tema son los siguientes: ● 3.12A Explicar cómo la temperatura y la precipitación afectan el crecimiento y el comportamiento de los animales a través de la migración y la hibernación, y las respuestas de las plantas a través del letargo. ● 3.12B Identificar y describir el flujo de energía en una cadena alimenticia y predecir cómo los cambios en una cadena alimenticia, tales como la eliminación de ranas de un estanque o de abejas de un campo, afectan al ecosistema. ● 3.12C Describir cómo los cambios naturales en el medioambiente, tales como inundaciones y sequías, hacen que algunos organismos prosperen y otros mueran o se trasladen a nuevos lugares. ● 3.12D Identificar fósiles como evidencia de organismos vivos y medioambientes del pasado, incluyendo fósiles comunes de Texas. TEKS de prácticas científicas y de ingeniería y de temas y conceptos recurrentes: ● 3.1G Desarrollar y usar modelos para representar fenómenos y objetos. ● 3.2B Analizar datos a través de la identificación de cualquier patrón. ● 3.5A Identificar patrones para explicar fenómenos científicos. ● 3.5G Explicar cómo ciertos factores o condiciones afectan el cambio en organismos y sistemas. Para iniciar este tema, los estudiantes miran y responden a un video corto del fenómeno de anclaje sobre la migración de las mariposas monarca y exploran por qué migran. A medida que avanzan en las Experiencias, responderán a la pregunta del fenómeno de anclaje, ¿Por qué las mariposas monarca vienen aquí? Una de las mejores maneras para que los estudiantes comprueben lo que han aprendido es explicándoselo a otra persona. Pregúntele a su estudiante sobre sus experiencias en la clase y pídale que le explique el contenido que está aprendiendo en la escuela, usando sus propias palabras o su idioma materno, si es necesario. Las investigaciones han demostrado que a los estudiantes les va mejor en la escuela cuando tienen el apoyo de quienes los rodean. Juntos pueden disfrutar y aprender conceptos científicos interesantes, y al mismo tiempo ayudar a su estudiante en ¡Experimenta las Ciencias! Cordialmente,

Updated Text: Guía de comunicación entre la escuela y el hogar SAVVAS Learning tiene como objetivo proporcionar materiales educativos que ayuden a los estudiantes a tener éxito y a adquirir competencias en las ciencias. La buena instrucción comienza en el salón de clases, pero la participación de los padres y tutores en el aprendizaje de los estudiantes es clave para garantizar su éxito. Las oportunidades de aprendizaje de los estudiantes fuera de la jornada escolar pueden y deben aprovecharse en el salón para ofrecer una experiencia de aprendizaje más robusta. El aprendizaje en el hogar aporta a los estudiantes otra perspectiva, que, cuando se lleva al salón de clases, puede enriquecer el aprendizaje de todos los estudiantes en el aula. Utilice las siguientes estrategias para mejorar su comunicación con los padres o tutores: ● Reparta la carta De la escuela al hogar al inicio de año escolar. Esa carta contiene una descripción general del contenido que se tratará a lo largo del año escolar y describe el diseño del programa y la importancia del modelo de las “5 E” que está basado en los fenómenos. También incluye algunas maneras generales en las que los padres o tutores pueden ayudar a los estudiantes durante todo el año. ● Use la información que se ofrece en las secciones *Emprender experiencias dinámicas (Engage in Dynamic Experiences)*, *Contenido y secuencia (Scope and Sequence)*, *Plan del tema (Topic Planner)* y *Vistazo a la Experiencia (Experience At-A-Glance)* de la Guía del maestro (Teacher Guide) o de la Guía de conversación para el maestro para explicar a los estudiantes y a los padres o tutores el diseño del programa al principio del año escolar. ● Reparta las cartas De la escuela al hogar para los temas entre los padres o tutores al inicio de cada tema. Estas cartas incluyen información sobre lo que los estudiantes aprenderán en el

tema, así como ideas para que los padres y tutores apoyen a sus estudiantes. • Use las secciones Conexión con el hogar (Home Connections), A nivel local (Take it Local) y Colaborar con la comunidad (Collaborate with the Community) de la Guía del maestro (Teacher Guide) o de la Guía de conversación para el maestro, para que los padres o tutores y la comunidad en general participen y ayuden a los estudiantes a establecer conexiones personales con el contenido. • Anime a los estudiantes a comentar lo que están aprendiendo en la escuela con sus padres o tutores usando sus propias palabras y su idioma materno, si es necesario. • Invite a los padres o tutores a mantenerse involucrados en el aprendizaje de sus estudiantes. Asegúrese de comunicarles que agradece sus comentarios y contribuciones, y de que sepan cómo pueden comunicarse con usted. Los padres y los tutores pueden ser una fuente muy valiosa de apoyo para los estudiantes. Esperamos que estas estrategias lo/la ayuden a obtener ese apoyo y a personalizar el aprendizaje de cada estudiante.

Original Text: New Slide 15 and Teacher Notes. Note that the following slides will change by one number through the end of the presentation. Change made to a shared G3–G5 component, based on a citation rejected for G5, TEKS 1.F.vi.

Updated Text: Slide 15 Analizar e interpretar datos: Diagramas de Venn Los diagramas de Venn ayudan a los científicos a comparar y contrastar los datos que reúnen. Para elaborar un diagrama de Venn, se dibujan dos círculos con una sección donde se superponen. Agrega los datos que son iguales en la sección donde los círculos se superponen. Agrega los datos que son diferentes donde los círculos no se superponen. Venn diagram: two intersecting circles labeled "Plátano" and "Limón" Sample answers under "Plátano": liso, dulce, largo. Sample answers under "Limón": irregular, redondo, agrio. Sample answer of shared data: hay que quitar la cáscara, amarillo, tiene semillas ¿Cómo podemos comparar y contrastar plátanos y limones? Teacher Notes: Apoyo para el maestro Pregunte: ¿Qué tipo de diagrama es este? ¿Qué información pueden identificar? Ejemplo de respuesta: Es un diagrama de Venn. Muestra las similitudes y diferencias entre un plátano y un limón. Muestre la diapositiva siguiente y lea el texto con la clase. Comentar Explique que cuando analizamos datos, a veces necesitamos comparar y contrastar los datos que reunimos. En este caso, nuestros datos vienen de observaciones. En el diagrama que se muestra, los estudiantes deberían reconocer que: los datos que se aplican solo al plátano se encuentran en el lado izquierdo del diagrama, los datos que se aplican solo al limón se encuentran en el lado derecho del diagrama, y los datos que se aplican al plátano y al limón se encuentra en el medio, la parte del diagrama que se superpone. Usar un diagrama de Venn hace que la similitudes y diferencias entre las dos cosas sean más visibles.

Original Text: New Content

Updated Text: Carta de la escuela al hogar para este tema Estimados padres de familia o tutores: En este tema, “La materia”, los estudiantes aprenden sobre la materia. Las Experiencias en este tema son las siguientes: ● Experiencia 1: Propiedades de la materia ● Experiencia 2: Sólidos, líquidos y gases ● Experiencia 3: Mezclas y soluciones Primero, en la Experiencia 1, los estudiantes clasifican y describen objetos según sus propiedades, como si se hunden o flotan en el agua. A continuación, en la Experiencia 2, los estudiantes comparan y contrastan las propiedades de los sólidos, los líquidos y los gases. Finalmente, en la Experiencia 3, los estudiantes demuestran que la masa se conserva cuando se mezclan sustancias. Los principales TEKS de contenido cubiertos en este tema son los siguientes: ● 4.6A: Clasificar y describir la materia usando las propiedades físicas observables, incluyendo temperatura, masa, magnetismo, densidad relativa (capacidad de hundirse o flotar en el agua) y estado físico (sólido, líquido, gas). ● 4.6B: Investigar y comparar una variedad de mezclas, incluyendo las soluciones que se componen de líquidos en líquidos y sólidos en líquidos. ● 4.6C: Demostrar que la materia se conserva cuando se forman mezclas, tales como el suelo y el agua, o el aceite y el agua. TEKS de prácticas científicas y de ingeniería y de temas y conceptos recurrentes: ● 4.3A: Desarrollar explicaciones y proponer soluciones apoyadas en datos y modelos. ● 4.5A: Identificar y usar patrones para explicar fenómenos científicos o para diseñar soluciones. Para iniciar este tema, los estudiantes miran y responden a un corto video del fenómeno de anclaje que muestra a una persona dando forma a vidrio caliente y fundido. A medida que avanzan en las Experiencias, los estudiantes usarán actividades que los ayudarán a entender mejor para poder responder a la pregunta del fenómeno de anclaje: ¿Cómo se da forma al vidrio? Una de las mejores maneras para que los estudiantes comprueben lo que han aprendido es explicándoselo a otra persona. Pregúntele a su estudiante sobre sus experiencias en la clase y pídale que le explique el contenido que está aprendiendo en la escuela, usando sus propias palabras o su idioma materno, si es necesario. Las investigaciones han demostrado que a los estudiantes les va mejor en la escuela cuando tienen el apoyo de quienes los rodean. Juntos pueden disfrutar y aprender conceptos científicos interesantes, y al mismo tiempo ayudar a su

Updated Text: Guía de comunicación entre la escuela y el hogar SAVVAS Learning tiene como objetivo proporcionar materiales educativos que ayuden a los estudiantes a tener éxito y a adquirir competencias en las ciencias. La buena instrucción comienza en el salón de clases, pero la participación de los padres y tutores en el aprendizaje de los estudiantes es clave para garantizar su éxito. Las oportunidades de aprendizaje de los estudiantes fuera de la jornada escolar pueden y deben aprovecharse en el salón para ofrecer una experiencia de aprendizaje más robusta. El aprendizaje en el hogar aporta a los estudiantes otra perspectiva, que, cuando se lleva al salón de clases, puede enriquecer el aprendizaje de todos los estudiantes en el aula. Utilice las siguientes estrategias para mejorar su comunicación con los padres o tutores:

- Reparta la carta De la escuela al hogar al inicio de año escolar. Esa carta contiene una descripción general del contenido que se tratará a lo largo del año escolar y describe el diseño del programa y la importancia del modelo de las “5 E” que está basado en los fenómenos. También incluye algunas maneras generales en las que los padres o tutores pueden ayudar a los estudiantes durante todo el año.
- Use la información que se ofrece en las secciones *Emprender experiencias dinámicas (Engage in Dynamic Experiences)*, *Contenido y secuencia (Scope and Sequence)*, *Plan del tema (Topic Planner)* y *Vistazo a la Experiencia (Experience At-A-Glance)* de la Guía del maestro (Teacher Guide) o de la Guía de conversación para el maestro para explicar a los estudiantes y a los padres o tutores el diseño del programa al principio del año escolar.
- Reparta las cartas De la escuela al hogar para los temas entre los padres o tutores al inicio de cada tema. Estas cartas incluyen información sobre lo que los estudiantes aprenderán en el tema, así como ideas para que los padres y tutores apoyen a sus estudiantes.
- Use las secciones *Conexión con el hogar (Home Connections)*, *A nivel local (Take it Local)* y *Colaborar con la comunidad (Collaborate with the Community)* de la Guía del maestro (Teacher Guide) o de la Guía de conversación para el maestro, para que los padres o tutores y la comunidad en general participen y ayuden a los estudiantes a establecer conexiones personales con el contenido.
- Anime a los estudiantes a comentar lo que están aprendiendo en la escuela con sus padres o tutores usando sus propias palabras y su idioma materno, si es necesario.
- Invite a los padres o tutores a mantenerse involucrados en el aprendizaje de sus estudiantes. Asegúrese de comunicarles que agradece sus comentarios y contribuciones, y de que sepan cómo pueden comunicarse con usted. Los padres y los tutores pueden ser una fuente muy valiosa de apoyo para los estudiantes. Esperamos que estas estrategias lo/la ayuden a obtener ese apoyo y a personalizar el aprendizaje de cada estudiante.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Original Text: New Slide 26. Note: that the following slides will change by one number through the end of the presentation.

Updated Text: Slide: Comunicar en una variedad de escenarios Los científicos e ingenieros comunican sus explicaciones y soluciones de manera individual y de manera colaborativa en una variedad de escenarios. Pueden hacer presentaciones a sus colegas o al público general de manera individual. Pueden colaborar con otros científicos en estas presentaciones. ¿Cuáles son algunos de los escenarios en los que pueden comunicar una explicación o una solución? Teacher: Comunicar en una variedad de escenarios Apoyo para el maestro Explique que los estudiantes se comunican en una variedad de escenarios a diario. Hablan con sus compañeros en la escuela, con sus compañeros de equipo en una práctica deportiva, y con adultos en sus hogares. Muestre la siguiente diapositiva. Léala con la clase. Discusión Pida a los estudiantes que piensen cómo comunican información en la escuela en comparación con cómo lo hacen en sus hogares. Pregunte: Cuando comunican información en la escuela, ¿lo hacen de la misma manera en que lo hacen en sus hogares? Expliquen su respuesta. Ejemplo de respuesta: A veces, la manera en que comunico información en la escuela es diferente de cómo lo hago en mi hogar. En la escuela, doy respuestas más formales que las respuestas que doy en mi hogar. Explique a los estudiantes que los científicos y los ingenieros también trabajan juntos, o se colaboran entre ellos. Pida a los estudiantes que piensen sobre la última vez que trabajaron juntos en un proyecto en la escuela y lo comparen con jugar un juego con un amigo. Pregunte: ¿Cómo se comunicaron durante el proyecto en la escuela en comparación con cómo lo hicieron durante el juego con un amigo? Los estudiantes quizá respondan que se comunicaron de estilos diferentes al presentar un proyecto o planificar un juego con sus compañeros de equipo durante un partido. También pueden decir que tuvieron que hablar en voz baja durante la clase, en diferencia a lo que hicieron durante el juego. Recuerde a los estudiantes que cuando otras personas están comunicando sus ideas es importante escucharlas activamente. Y que también es importante que sean respetuosos entre compañeros durante las discusiones en la clase.

Updated Text:

Analizar e interpretar datos: Mapas de conceptos

Los mapas de conceptos ayudan a los científicos a reunir y organizar datos para mostrar cómo se relacionan. Para elaborar un mapa de conceptos, organiza las ideas principales en categorías y usa líneas para mostrar cómo se relacionan entre sí.

¿De qué manera muestra este mapa de conceptos la relación que hay entre los peces, las aves, los anfibios, los mamíferos y los reptiles?

Todos son animales.

Analizar e interpretar datos: Mapas de conceptos

Apoyo para el maestro

Pregunte: ¿Qué tipo de diagrama es este? ¿Qué información pueden identificar?

Ejemplo de respuesta: Es un mapa de conceptos. Muestra los cinco tipos de animales.

Muestre la diapositiva siguiente. Lea el texto con la clase.

Comentar

Explique que cuando organizamos datos para elaborar un mapa de conceptos podemos mostrar las relaciones entre los diferentes datos. Al usar un mapa de conceptos podemos ver mejor las relaciones entre ellos. Explique a los estudiantes que pueden usar simples líneas o flechas para hacer que las conexiones sean más claras.

¡Inténtalo!

Pida a los estudiantes que participen en una discusión donde comenten cómo pueden ampliar este mapa de conceptos. Una sugerencia, por ejemplo, podría ser añadir ejemplos de animales en cada categoría.

Original Text: New Slide 26. Note that the following slides will change by one number through the end of the presentation. Change made to a shared G3–G5 component, based on a citation rejected for G4, TEKS 3.B.v.

Updated Text: Slide: Comunicar en una variedad de escenarios Los científicos e ingenieros comunican sus explicaciones y soluciones de manera individual y de manera colaborativa en una variedad de escenarios. Pueden hacer presentaciones a sus colegas o al público general de manera individual. Pueden colaborar con otros científicos en estas presentaciones. ¿Cuáles son algunos de los escenarios en los que pueden comunicar una explicación o una solución? Teacher: Comunicar en una variedad de escenarios Apoyo para el maestro Explique que los estudiantes se comunican en una variedad de escenarios a diario. Hablan con sus compañeros en la escuela, con sus compañeros de equipo en una práctica deportiva, y con adultos en sus hogares. Muestre la siguiente diapositiva. Léala con la clase. Discusión Pida a los estudiantes que piensen cómo comunican información en la escuela en comparación con cómo lo hacen en sus hogares. Pregunte: Cuando comunican información en la escuela, ¿lo hacen de la misma manera en que lo hacen en sus hogares? Expliquen su respuesta. Ejemplo de respuesta: A veces, la manera en que comunico información en la escuela es diferente de cómo lo hago en mi hogar. En la escuela, doy respuestas más formales que las respuestas que doy en mi hogar. Explique a los estudiantes que los científicos y los ingenieros también trabajan juntos, o se colaboran entre ellos. Pida a los estudiantes que piensen sobre la última vez que trabajaron juntos en un proyecto en la escuela y lo comparen con jugar un juego con un amigo. Pregunte: ¿Cómo se comunicaron durante el proyecto en la escuela en comparación con cómo lo hicieron durante el juego con un amigo? Los estudiantes quizá respondan que se comunicaron de estilos diferentes al presentar un proyecto o planificar un juego con sus compañeros de equipo durante un partido. También pueden decir que tuvieron que hablar en voz baja durante la clase, en diferencia a lo que hicieron durante el juego. Recuerde a los estudiantes que cuando otras personas están comunicando sus ideas es importante escucharlas activamente. Y que también es importante que sean respetuosos entre compañeros durante las discusiones en la clase.

de la energía en sistemas. Luego, en la Experiencia 2, los estudiantes exploran la energía eléctrica en el contexto de los circuitos y la transformación de la energía. Por último, en la Experiencia 3, los estudiantes exploran y explican cómo viaja la luz. Los principales TEKS de contenido cubiertos en este tema son los siguientes: ● 5.8A: Investigar y describir la transformación de la energía en sistemas, tal como la energía en una linterna de baterías que cambia de energía química a energía eléctrica y a energía luminosa. ● 5.8B: Demostrar que la energía eléctrica en circuitos completos se puede transformar en energía de movimiento, luminosa, sonora o térmica, e identificar los requisitos para el funcionamiento de un circuito eléctrico. ● 5.8C: Demostrar y explicar cómo la luz viaja en línea recta y puede ser reflejada, refractada o absorbida. TEKS de prácticas científicas y de ingeniería y de temas y conceptos recurrentes: ● 5.1D: Usar herramientas, incluyendo materiales para construir circuitos, para observar, medir, probar y analizar información. ● 5.1E: Reunir observaciones como evidencia. ● 5.1G: Desarrollar y usar modelos para representar fenómenos y objetos. ● 5.5C: Usar escala para comparar diferentes sistemas. ● 5.5D: Examinar las partes de un sistema y su interdependencia en el funcionamiento del sistema. Carta de la escuela al hogar para este tema Para iniciar este tema, los estudiantes miran y responden a un corto video del fenómeno de anclaje de una persona que baila que usa zapatillas luminosas y exploran cómo la energía cambia de forma en las zapatillas. A medida que avanzan en las Experiencias, los estudiantes responderán a la pregunta del fenómeno de anclaje: ¿Qué hace que las zapatillas se iluminen? Una de las mejores maneras para que los estudiantes comprueben lo que han aprendido es explicándoselo a otra persona. Pregúntele a su estudiante sobre sus experiencias en la clase y pídale que le explique el contenido que está aprendiendo en la escuela, usando sus propias palabras o su idioma materno, si es necesario. Las investigaciones han demostrado que a los estudiantes les va mejor en la escuela cuando tienen el apoyo de quienes los rodean. Juntos pueden disfrutar y aprender conceptos científicos interesantes, y al mismo tiempo ayudar a su estudiante en ¡Experimenta las Ciencias! Cordialmente,

---

Updated Text: Carta de la escuela al hogar para este tema Estimados padres de familia o tutores: En el tema “La Tierra y el espacio”, los estudiantes aprenden sobre los patrones relacionados con la rotación de la Tierra. Las Experiencias en este tema son las siguientes: ● Experiencia 1: La rotación de la Tierra ● Experiencia 2: Patrones y sombras Primero, en la Experiencia 1, los estudiantes estudian cómo rota la Tierra sobre su propio eje y explican cómo se relaciona esa rotación con el ciclo día-noche y el desplazamiento aparente del Sol por el cielo. Luego, en la Experiencia 2, investigan cómo el desplazamiento del Sol por el cielo causa que las sombras cambien de forma y de posición. Los principales TEKS de contenido cubiertos en este tema son los siguientes: ● 5.9A: Demostrar que la Tierra gira sobre su eje una vez aproximadamente cada 24 horas y explicar cómo eso causa el ciclo día/noche y la apariencia del Sol moviéndose a través del cielo, lo que resulta en cambios en las posiciones y formas de las sombras. TEKS de prácticas científicas y de ingeniería y de temas y conceptos recurrentes: ● 5.1E: Reunir observaciones y medidas como evidencia. ● 5.1G: Desarrollar y usar modelos para representar fenómenos, objetos y procesos, o diseñar un prototipo para una solución a un problema. ● 5.2A: Identificar ventajas y limitaciones de modelos, tales como su tamaño, escala, propiedades y materiales. ● 5.5A: Identificar y usar patrones para explicar fenómenos científicos o para diseñar soluciones. ● 5.5B: Identificar e investigar relaciones de causa-efecto para explicar fenómenos científicos o analizar problemas. ● 5.5G: Explicar cómo ciertos factores o condiciones afectan la estabilidad y el cambio en objetos, organismos y sistemas. Para iniciar este tema, los estudiantes miran y responden a un corto video del fenómeno de anclaje que muestra las sombras que se mueven a lo largo de un día. A medida que los estudiantes avancen en las Experiencias, responderán a la pregunta del fenómeno de anclaje: ¿Cómo se mueven las sombras? Una de las mejores maneras para que los estudiantes comprueben lo que han aprendido es explicándoselo a otra persona. Analizar e interpretar datos: Mapas de conceptos

Los mapas de conceptos ayudan a los científicos a reunir y organizar datos para mostrar cómo se relacionan. Para elaborar un mapa de conceptos, organiza las ideas principales en categorías y usa líneas para mostrar cómo se relacionan entre sí.

¿De qué manera muestra este mapa de conceptos la relación que hay entre los peces, las aves, los anfibios, los mamíferos y los reptiles?

Todos son animales.

Analizar e interpretar datos: Mapas de conceptos

Apoyo para el maestro

Pregunte: ¿Qué tipo de diagrama es este? ¿Qué información pueden identificar?

Ejemplo de respuesta: Es un mapa de conceptos. Muestra los cinco tipos de animales.

Muestre la diapositiva siguiente. Lea el texto con la clase.

Comentar

Explique que cuando organizamos datos para elaborar un mapa de conceptos podemos mostrar las relaciones entre los diferentes datos. Al usar un mapa de conceptos podemos ver mejor las relaciones entre ellos. Explique a los estudiantes que pueden usar simples líneas o flechas para hacer que las conexiones sean más claras.

¡Inténtalo!

Pida a los estudiantes que participen en una discusión donde comenten cómo pueden ampliar este mapa de conceptos. Una sugerencia, por ejemplo, podría ser añadir ejemplos de animales en cada categoría.

Link to Updated Content:

[View Updated Content](#)

Original Text: New Content

Updated Text: Guía de comunicación entre la escuela y el hogar SAVVAS Learning tiene como objetivo proporcionar materiales educativos que ayuden a los estudiantes a tener éxito y a adquirir competencias en las ciencias. La buena instrucción comienza en el salón de clases, pero la participación de los padres y tutores en el aprendizaje de los estudiantes es clave para garantizar su éxito. Las oportunidades de aprendizaje de los estudiantes fuera de la jornada escolar pueden y deben aprovecharse en el salón para ofrecer una experiencia de aprendizaje más robusta. El aprendizaje en el hogar aporta a los estudiantes otra perspectiva, que, cuando se lleva al salón de clases, puede enriquecer el aprendizaje de todos los estudiantes en el aula. Utilice las siguientes estrategias para mejorar su comunicación con los padres o tutores:

- Reparta la carta De la escuela al hogar al inicio de año escolar. Esa carta contiene una descripción general del contenido que se tratará a lo largo del año escolar y describe el diseño del programa y la importancia del modelo de las “5 E” que está basado en los fenómenos. También incluye algunas maneras generales en las que los padres o tutores pueden ayudar a los estudiantes durante todo el año.
- Use la información que se ofrece en las secciones *Emprender experiencias dinámicas (Engage in Dynamic Experiences)*, *Contenido y secuencia (Scope and Sequence)*, *Plan del tema (Topic Planner)* y *Vistazo a la Experiencia (Experience At-A-Glance)* de la Guía del maestro (Teacher Guide) o de la Guía de conversación para el maestro para explicar a los estudiantes y a los padres o tutores el diseño del programa al principio del año escolar.
- Reparta las cartas De la escuela al hogar para los temas entre los padres o tutores al inicio de cada tema. Estas cartas incluyen información sobre lo que los estudiantes aprenderán en el tema, así como ideas para que los padres y tutores apoyen a sus estudiantes.
- Use las secciones *Conexión con el hogar (Home Connections)*, *A nivel local (Take it Local)* y *Colaborar con la comunidad (Collaborate with the Community)* de la Guía del maestro (Teacher Guide) o de la Guía de conversación para el maestro, para que los padres o tutores y la comunidad en general participen y ayuden a los estudiantes a establecer conexiones personales con el contenido.
- Anime a los estudiantes a comentar lo que están aprendiendo en la escuela con sus padres o tutores usando sus propias palabras y su idioma materno, si es necesario.
- Invite a los padres o tutores a mantenerse involucrados en el aprendizaje de sus estudiantes. Asegúrese de comunicarles que agradece sus comentarios y contribuciones, y de que sepan cómo pueden comunicarse con usted. Los padres y los tutores pueden ser una fuente muy valiosa de apoyo para los estudiantes. Esperamos que estas estrategias lo/la ayuden a obtener ese apoyo y a personalizar el aprendizaje de cada estudiante.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Original Text: New Slide 15 and Teacher Notes. Note that the following slides will change by one number through the end of the presentation.

Updated Text: Slide: Analizar e interpretar datos: Diagramas de Venn Los diagramas de Venn ayudan a los científicos a comparar y contrastar los datos que reúnen. Para elaborar un diagrama de Venn, se dibujan dos círculos con una sección donde se superponen. Agrega los datos que son iguales en la sección donde los círculos se superponen. Agrega los datos que son diferentes donde los círculos no se superponen. ¿Cómo podemos comparar y contrastar plátanos y limones?  
Teacher: Apoyo para el maestro Pregunte: ¿Qué tipo de diagrama es este? ¿Qué información pueden identificar? Ejemplo de respuesta: Es un diagrama de Venn. Muestra las similitudes y diferencias entre un plátano y un limón. Muestre la diapositiva siguiente y lea el texto con la clase. Comentar Explique que cuando analizamos datos, a veces necesitamos comparar y contrastar los datos que reunimos. En este caso, nuestros datos vienen de observaciones. En el diagrama que se muestra, los estudiantes deberían reconocer que: los datos que se aplican solo al plátano se encuentran en el lado izquierdo del diagrama, los datos que se aplican solo al limón se encuentran en el lado derecho del diagrama, y los datos que se aplican al plátano y al limón se encuentra en el medio, la parte del diagrama que se superpone. Usar un diagrama de Venn hace que la similitudes y diferencias entre las dos cosas sean más visibles.

dióxido de carbono y agua. El árbol usa la energía de la luz solar para crear azúcar y oxígeno del dióxido de carbono y el agua. La energía se mueve del sol a la planta. Luego, la planta usa esa energía para crear alimento para poder crecer.

Updated Text: 4. Sistemas, energía y materia Para entender un sistema, podemos estudiar sus partes y cómo interactúan entre sí. También podemos investigar el flujo de energía a través de sistemas y los ciclos de la materia a través de sistemas. Usa un mapa conceptual para explicar cómo un árbol utiliza energía y materia del ecosistema para producir azúcares durante el proceso de fotosíntesis. Usa tu mapa conceptual para comentar con un compañero cómo se conserva la materia en un ecosistema. Ejemplo de respuesta: El mapa conceptual debería mostrar que un árbol absorbe luz solar y usa materia del ecosistema, dióxido de carbono y agua, y nutrientes del suelo. El árbol usa la energía de la luz solar para producir azúcar y oxígeno del dióxido de carbono y el agua. La energía se mueve del sol a la planta. La materia se mueve desde el aire y el suelo. Luego, la planta usa la energía y la materia para crear alimentos, para poder crecer.

Updated Text: Carta de la escuela al hogar para este tema Estimados padres de familia o tutores: En el tema “La materia”, los estudiantes aprenden sobre la materia. Las Experiencias en este tema son las siguientes: ● Experiencia 1: Propiedades de la materia ● Experiencia 2: Sólidos, líquidos y gases ● Experiencia 3: Mezclas y soluciones Primero, en la Experiencia 1, los estudiantes miden y observan propiedades físicas de la materia y comparan y contrastan la materia basándose en sus propiedades físicas. Luego, en la Experiencia 2, los estudiantes comparan y contrastan la materia según su estado físico e ilustran cómo la materia está formada por pequeñas partículas. Finalmente, en la Experiencia 3, los estudiantes comparan las propiedades de las sustancias antes y después de que se combinen en mezclas y soluciones, y demuestran la conservación de la materia. Los principales TEKS de contenido cubiertos en este tema son los siguientes: ● 5.6A: Comparar y contrastar la materia con base en las propiedades físicas que se pueden medir, poner a prueba u observar, incluyendo masa, magnetismo, densidad relativa (capacidad de hundirse y flotar usando el agua como punto de referencia), estado físico (sólido, líquido, gas), volumen, solubilidad en agua y capacidad de conducir o aislar energía térmica y energía eléctrica. ● 5.6B: Demostrar y explicar que algunas mezclas mantienen las propiedades físicas de sus sustancias, tales como limaduras de hierro y arena, o arena y agua. ● 5.6C: Comparar las propiedades de las sustancias antes y después de que se combinen en una solución y demostrar que la materia se conserva en soluciones. ● 5.6D: Ilustrar cómo la materia está formada por partículas que son demasiado pequeñas para ser vistas, tales como las del aire en un globo. TEKS de prácticas científicas y de ingeniería y de temas y conceptos recurrentes: ● 5.1B: Usar prácticas científicas para planificar y llevar a cabo investigaciones descriptivas e investigaciones experimentales simples y usar prácticas de ingeniería para diseñar soluciones a problemas. ● 5.5A: Identificar y usar patrones para explicar fenómenos científicos o para diseñar soluciones. Carta de la escuela al hogar para este tema Para iniciar este tema, los estudiantes miran y responden a un corto video del fenómeno de anclaje que muestra cómo se mezcla agua de colores con almidón de maíz. A medida que avanzan en las Experiencias, los estudiantes usarán actividades que los ayudarán a entender mejor para poder responder a la pregunta del fenómeno de anclaje: ¿En qué se diferencia esta mezcla de sus partes? Una de las mejores maneras para que los estudiantes comprueben lo que han aprendido es explicándoselo a otra persona. Pregúntele a su estudiante sobre sus experiencias en la clase y pídale que le explique el contenido que está aprendiendo en la escuela, usando sus propias palabras o su idioma materno, si es necesario. Las investigaciones han demostrado que a los estudiantes les va mejor en la escuela cuando tienen el apoyo de quienes los rodean. Juntos pueden disfrutar y aprender conceptos científicos interesantes, y al mismo tiempo ayudar a su estudiante en ¡Experimenta las Ciencias! Cordialmente, \_\_\_\_\_ Maestro/Maestra de Ciencias

Original Text: New Slide 28. Note that the following slides will change by one number through the end of the presentation. Change made to a shared G3–G5 component, based on a citation rejected for G4, TEKS 3.B.iv.

Updated Text: Slide: Comunicar en una variedad de formatos Los científicos e ingenieros comunican sus explicaciones y soluciones de forma individual y colaborativa en diversos formatos. Pueden escribir artículos, crear modelos o prototipos o participar en mesas redondas para explicar sus investigaciones individualmente o en colaboración con otros científicos. ¿Cuáles son algunas formas en las que pueden comunicar una explicación a la clase? Teacher: Comunicar en una variedad de escenarios Apoyo para el maestro Explique que los estudiantes se comunican diariamente en diversos formatos. Hablan, escriben artículos para la escuela, hacen dibujos, construyen modelos, etc. Muestre la diapositiva siguiente. Lea el texto con la clase. Comentar Pida a los estudiantes que piensen en la variedad de formatos que usan para comunicar sus ideas. Pregunte: ¿Qué formato te gusta más para comunicar tus ideas? ¿Por qué? ¿Es el mismo en todas las situaciones? Los estudiantes podrían responder que les gusta escribir sus ideas en un diario. O que les gusta hablar con la familia y los amigos. La situación puede determinar el tipo de formato de comunicación que prefieren los estudiantes. Recuerde a los estudiantes que cuando otras personas comunican sus ideas, es importante escucharlas activamente. Y que también es importante que sean respetuosos entre compañeros durante las discusiones en la clase.

Updated Text: Estimados padres de familia o tutores: En el tema “Administrar los recursos de la Tierra”, los estudiantes aprenden cómo se administran los recursos atmosféricos, hídricos, energéticos y de los suelos. Las Experiencias en este tema son las siguientes: Experiencia 1: Recursos atmosféricos Experiencia 2: Recursos hídricos Experiencia 3: Recursos de suelos Experiencia 4: Recursos energéticos En la Experiencia 1, los estudiantes aprenden sobre el aire como recurso, los efectos adversos de las actividades humanas en la calidad del aire y las formas de reducir la contaminación atmosférica. En las Experiencias 2 y 3, los estudiantes adoptan un enfoque similar para aprender sobre el agua y el suelo, respectivamente. En la Experiencia 4, los estudiantes aprenden sobre los recursos energéticos, incluidas las energías renovables y no renovables y su administración, su uso y las interconexiones de esos recursos con el medio ambiente. Los principales TEKS de contenido cubiertos en este tema son los siguientes: 6.11A: Investigar y describir por qué la administración de los recursos es importante en la reducción de la energía global, la pobreza, la malnutrición y la contaminación del aire y el agua. 6.11B: Explicar cómo la conservación, el aumento de la eficiencia y la tecnología pueden

# Proclamation 2024: Report of New Content

ayudar a administrar el aire, el agua, el suelo y los recursos de energía. Los principales TEKS de Prácticas de ciencias y de ingeniería y de temas y conceptos recurrentes cubiertos en este tema son los siguientes: 6.3A: Desarrollar explicaciones y proponer soluciones apoyadas en datos y modelos, y que sean consistentes con ideas, principios y teorías científicas. 6.5B: Identificar e investigar relaciones de causa-efecto para explicar fenómenos científicos o analizar problemas. Para iniciar este tema, los estudiantes estudian el ejemplo de Bosco Verticale, un par de edificios de apartamentos que tienen miles de árboles pequeños que reciben aguas residuales filtradas del edificio, entre otras de sus características “verdes”. Una de las mejores maneras para que los estudiantes comprueben lo que han aprendido es explicárselo a otra persona. Pregúntele a su estudiante sobre sus experiencias en la clase y pídale que le explique el contenido que está aprendiendo en la escuela, usando sus propias palabras o su idioma materno, si es necesario. Las investigaciones han demostrado que a los estudiantes les va mejor en la escuela cuando tienen el apoyo de quienes los rodean. Juntos pueden disfrutar y aprender conceptos científicos interesantes, y al mismo tiempo, ayudar a su estudiante en ¡Experimenta las Ciencias!

Updated Text: Estimados padres de familia o tutores: En el tema “Introducción a los seres vivos”, los estudiantes aprenden acerca de las células y las características compartidas de los seres vivos. Las Experiencias en este tema son los siguientes: Experiencia 1: Teoría celular Experiencia 2: Características de los seres vivos En la Experiencia 1, los estudiantes aprenden acerca de los numerosos científicos que contribuyeron a nuestra comprensión de la célula y al desarrollo de la teoría celular. En la Experiencia 2, descubren las características de los seres vivos. Los estudiantes identifican organismos unicelulares y pluricelulares, procariotas y eucariotas, y autótrofos y heterótrofos. Los principales TEKS de contenido cubiertos en este tema son los siguientes: 6.13A: Describir el desarrollo histórico de la teoría celular y explicar cómo los organismos están compuestos por una o más células, que provienen de células preexistentes y son la unidad básica de las estructuras y las funciones. 6.13B: Identificar y comparar las características básicas de los organismos, incluidos los procariotas y eucariotas, unicelulares y multicelulares, y autótrofos y heterótrofos. Los principales TEKS de Prácticas de ciencias y de ingeniería y de temas y conceptos recurrentes cubiertos en este tema son los siguientes: 6.5A: Identificar y aplicar patrones para comprender y conectar fenómenos científicos o para diseñar soluciones. 6.5B: Identificar e investigar relaciones de causa-efecto para explicar fenómenos científicos o analizar problemas. Para iniciar este tema, los estudiantes observan un video a cámara rápida de un cristal en crecimiento. Los estudiantes considerarán qué podría hacer que el cristal crezca y reflexionarán sobre la pregunta: si crece, ¿está vivo? Una de las mejores maneras para que los estudiantes comprueben lo que han aprendido es explicárselo a otra persona. Pregúntele a su estudiante sobre sus experiencias en la clase y pídale que le explique el contenido que está aprendiendo en la escuela, usando sus propias palabras o su idioma materno, si es necesario. Las investigaciones han demostrado que a los estudiantes les va mejor en la escuela cuando tienen el apoyo de quienes los rodean. Updated Text: Estimados padres de familia o tutores: En el tema “Organismos y ecosistemas”, los estudiantes aprenden acerca de cómo los ecosistemas se organizan y cómo los organismos interactúan entre sí y con su entorno. Las Experiencias en este tema son las siguientes: Experiencia 1: Organización de los ecosistemas Experiencia 2: Competencia entre los organismos Experiencia 3: Interacciones en los ecosistemas Experiencia 4: Variaciones en las poblaciones En la Experiencia 1, los estudiantes aprenden acerca de la organización jerárquica de los organismos, las poblaciones y la comunidad dentro de un ecosistema. En la Experiencia 2, los estudiantes se familiarizan con las formas en que los organismos compiten por factores abióticos y bióticos. En la Experiencia 3, los estudiantes investigan las interacciones que tienen los organismos y las poblaciones, como la depredación y las relaciones simbióticas. Finalmente, en la Experiencia 4, los estudiantes descubren que los organismos tienen variaciones que pueden influir en la supervivencia de las poblaciones. Los principales TEKS de contenido cubiertos en este tema son los siguientes: 6.12A: Investigate how organisms and populations in an ecosystem depend on and may compete for biotic factors such as food and abiotic factors such as availability of light and water, range of temperatures, or soil composition. 6.12B: Describe and give examples of predatory, competitive, and symbiotic relationships between organisms, including mutualism, parasitism, and commensalism. Los principales TEKS de Prácticas de ciencias y de ingeniería y de temas y conceptos recurrentes cubiertos en este tema son los siguientes: 6.1E: Collect quantitative data using the International System of Units (SI) and qualitative data as evidence. 6.5D: Examine and model the parts of a system and their interdependence in the function of the system. Para iniciar este tema, los estudiantes aprenden acerca de dos poblaciones de osos en un ecosistema ártico en calentamiento: el oso polar y el oso pizzly, un cruce entre un oso polar y un oso pardo. Los estudiantes consideran cómo y por qué cada población podría cambiar con el tiempo. Una de las mejores maneras para que los estudiantes comprueben lo que han aprendido es explicándoselo a otra persona. Pregúntele a su estudiante sobre sus experiencias en la clase y pídale que le explique el contenido que está aprendiendo en la escuela, usando sus propias palabras o su idioma materno, si es necesario. Las investigaciones han demostrado que a los estudiantes les va mejor en la escuela cuando tienen el apoyo de quienes los rodean. Juntos pueden disfrutar y aprender conceptos científicos interesantes, y al mismo tiempo, ayudar a su estudiante en ¡Experimenta las Ciencias!

Updated Text: SAVVAS Learning tiene como objetivo proporcionar materiales educativos que ayuden a los estudiantes a tener éxito y a adquirir competencias en las ciencias. La buena instrucción comienza en el salón de clases, pero la participación de los padres y tutores en el aprendizaje de los estudiantes es clave para garantizar su éxito. Las oportunidades de aprendizaje de los estudiantes fuera de la jornada escolar pueden y deben aprovecharse en el salón para ofrecer una experiencia de aprendizaje más robusta. El aprendizaje en el hogar aporta a los estudiantes otra perspectiva, que, cuando se lleva al salón de clases, puede enriquecer el aprendizaje de todos los estudiantes en el aula. Utilice las siguientes estrategias para mejorar su comunicación con los padres o tutores: ● Reparta la carta De la escuela

Proclamation 2024: Report of New Content (08/25/2023)

Page 1574 of 1830

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

al hogar al inicio de año escolar. Esa carta contiene una descripción general del contenido que se tratará a lo largo del año escolar y describe el diseño del programa y la importancia del modelo de las “5 E” que está basado en los fenómenos. También incluye algunas maneras generales en las que los padres o tutores pueden ayudar a los estudiantes durante todo el año. ● Use la información que se ofrece en las secciones Emprender experiencias dinámicas (Engage in Dynamic Experiences), Contenido y secuencia (Scope and Sequence), Plan del tema (Topic Planner) y Vistazo a la Experiencia (Experience At-A-Glance) de la Guía del maestro (Teacher Guide) o de la Guía de conversación para el maestro para explicar a los estudiantes y a los padres o tutores el diseño del programa al principio del año escolar. ● Reparta las cartas De la escuela al hogar para los temas entre los padres o tutores al inicio de cada tema. Estas cartas incluyen información sobre lo que los estudiantes aprenderán en el tema, así como ideas para que los padres y tutores apoyen a sus estudiantes. ● Use las secciones Conexión con el hogar (Home Connections), A nivel local (Take it Local) y Colaborar con la comunidad (Collaborate with the Community) de la Guía del maestro (Teacher Guide) o de la Guía de conversación para el maestro, para que los padres o tutores y la comunidad en general participen y ayuden a los estudiantes a establecer conexiones personales con el contenido. ● Anime a los estudiantes a comentar lo que están aprendiendo en la escuela con sus padres o tutores usando sus propias palabras y su idioma materno, si es necesario. ● Invite a los padres o tutores a mantenerse involucrados en el aprendizaje de sus estudiantes. Asegúrese de comunicarles que agradece sus comentarios y contribuciones, y de que sepan cómo pueden comunicarse con usted. Los padres y los tutores pueden ser una fuente muy valiosa de apoyo para los estudiantes. Esperamos que estas estrategias lo/la ayuden a obtener ese apoyo y a personalizar el aprendizaje de cada estudiante.

Updated Text: Estimados estudiantes y padres de familia o tutores: En el Grado 6, los estudiantes estudiarán temas de ciencias físicas, terrestres y biológicas. Aprenderán sobre las fuerzas, la energía y los cambios de la materia. Explorarán las causas de las estaciones y las mareas, la estructura de la Tierra y cómo se administran los recursos de la Tierra. Finalmente, los estudiantes aprenderán sobre la teoría celular, las características de los seres vivos y sobre cómo los organismos interactúan en los ecosistemas. Este programa utiliza fenómenos o eventos que los estudiantes pueden observar en el mundo que los rodea, para inspirar su interés en la ciencia y orientar la investigación. El diseño de los materiales de instrucción sigue el modelo de las 5 Es, que está basado en la investigación. Este modelo tiene 5 fases: Emprender, Explorar, Explicar, Elaborar y Evaluar. Siguiendo este modelo, las actividades tienen una secuencia que tiene como meta apoyar una comprensión más profunda. Padres o tutores: A continuación, hay sugerencias para ayudar a su estudiante a adquirir las competencias necesarias y tener éxito en este curso: ● Revise el contenido que se está enseñando y asegúrese de hacer muchas preguntas. Anime a su estudiante a explicarle lo que ha aprendido en sus propias palabras o en su idioma materno. ● Pregúntele sobre las tareas que tiene y asegúrese de que las haya completado. ● Ayude a su estudiante a reunir los materiales y la información que necesita para sus actividades escolares. ● Aconséjele usar computadoras, tabletas u otros instrumentos digitales en la escuela y en la biblioteca. Si tiene computadora en casa, ayude a su estudiante a hacer investigación en línea. Con su ayuda y estas estrategias, su estudiante podrá tener una experiencia divertida y exitosa este año escolar.

Updated Text: Estimados padres de familia o tutores: En el tema “Propiedades y cambios de la materia”, los estudiantes aprenden acerca de las propiedades de la materia, diferentes formas de clasificarla y cómo la materia puede cambiar. Las Experiencias en este tema son las siguientes: Experiencia 1: Comparar los sólidos, los líquidos y los gases Experiencia 2: Propiedades físicas de la materia Experiencia 3: Metales, no metales y metaloides Experiencia 4: Identificar los cambios químicos En la Experiencia 1, los estudiantes aprenden acerca de los tres estados de la materia y cómo las partículas se comportan en ellos. En la Experiencia 2, los estudiantes profundizan en las propiedades físicas de la materia, incluyendo las de las mezclas homogéneas y heterogéneas. En la Experiencia 3, los estudiantes aprenden acerca de los elementos y la tabla periódica. En la Experiencia 4, los estudiantes aprenden cómo identificar evidencias de un cambio químico. Los principales TEKS de contenido cubiertos en este tema son los siguientes: 6.6A: Comparar sólidos, líquidos y gases en términos de estructura, forma, volumen y la energía cinética de los átomos y las moléculas. 6.6B: Investigar las propiedades físicas de la materia para distinguir entre sustancias puras, mezclas homogéneas (soluciones) y mezclas heterogéneas. 6.6C: Identificar elementos en la tabla periódica en cuanto a ser metales, no metales, metaloides y elementos de tierras raras con base en sus propiedades físicas y en su importancia para la vida moderna. 6.6D: Comparar la densidad de sustancias en relación con varios fluidos. 6.6E: Identificar la formación de una nueva sustancia usando la evidencia de un cambio químico posible. Los principales TEKS de Prácticas de ciencias y de ingeniería y de temas y conceptos recurrentes cubiertos en este tema son los siguientes: 6.1A: Hacer preguntas y definir problemas con base en observaciones o información de textos, fenómenos, modelos o investigaciones. 6.5A: Identificar y aplicar patrones para comprender y conectar fenómenos científicos o para diseñar soluciones. Para iniciar este tema, los estudiantes observan lo que le sucede a la masa de pizza al ser horneada. Una de las mejores maneras para que los estudiantes comprueben lo que han aprendido es explicándoselo a otra persona. Pregúntele a su estudiante sobre sus experiencias en la clase y pídale que le explique el contenido que está aprendiendo en la escuela, usando sus propias palabras o su idioma materno, si es necesario. Las investigaciones han demostrado que a los estudiantes les va mejor en la escuela cuando tienen el apoyo de quienes los rodean. Juntos pueden disfrutar y aprender conceptos científicos interesantes, y al mismo tiempo, ayudar a su estudiante en ¡Experimenta las Ciencias!

Updated Text: Estimados padres de familia o tutores: En el tema “Energía”, los estudiantes aprenden acerca de diferentes tipos de energía y cómo la energía se transfiere a través de las ondas. Las Experiencias en este tema son las siguientes: Experiencia 1: Energía cinética y energía potencial gravitacional Experiencia 2: Otros tipos de energía potencial Experiencia 3: Las ondas y la transferencia de energía Experiencia 4: Conservación de la energía En la Experiencia 1, los estudiantes aprenden sobre los conceptos de energía cinética y energía potencial. Comparan la energía cinética y la energía potencial gravitacional. En la Experiencia 2, aprenden acerca de la energía potencial elástica y química. En la Experiencia 3, los estudiantes exploran cómo se transfiere la energía en ondas transversales y longitudinales. Finalmente, en la Experiencia 4, exploran cómo se conserva la energía en diferentes sistemas. Los principales TEKS de contenido cubiertos en este tema son los siguientes: 6.8A: Comparar y contrastar las energías potenciales gravitacionales, elásticas y químicas con la energía cinética. 6.8B: Describir cómo se conserva la energía a través de transferencias y transformaciones en sistemas, tales como circuitos eléctricos, redes alimenticias, atracciones en parques de diversiones o en la fotosíntesis. 6.8C: Explicar cómo se transfiere la energía a través de ondas transversales y longitudinales. Los principales TEKS de Prácticas de ciencias y de ingeniería y de temas y conceptos recurrentes cubiertos en este tema son los siguientes: 6.1G: Desarrollar y usar modelos para representar fenómenos, sistemas, procesos o soluciones a problemas de ingeniería. 6.5B: Identificar e investigar relaciones de causa-efecto para explicar fenómenos científicos o analizar problemas. Para iniciar este tema, los estudiantes observan bolas rebotando en un video corto. Considerarán por qué una bola vuelve a moverse después de haber golpeado el suelo. Una de las mejores maneras para que los estudiantes comprueben lo que han aprendido es explicándoselo a otra persona. Pregúntele a su estudiante sobre sus experiencias en la clase y pídale que le explique el contenido que está aprendiendo en la escuela, usando sus propias palabras o su idioma materno, si es necesario. Las investigaciones han demostrado que a los estudiantes les va mejor en la escuela cuando tienen el apoyo de quienes los rodean. Juntos pueden disfrutar y aprender conceptos científicos interesantes, y al mismo tiempo, ayudar a su estudiante en ¡Experimenta las Ciencias!

Updated Text: Estimados padres de familia o tutores: En el tema “El sistema Tierra-Sol-Luna”, los estudiantes aprenden acerca del sistema Tierra-Sol-Luna y cómo se relaciona con las estaciones y las mareas de la Tierra. Las Experiencias en este tema son las siguientes: Experience 1: Los movimientos de la Tierra y las estaciones Experience 2: Las mareas En la Experiencia 1, los estudiantes aprenden acerca de la inclinación del eje de rotación de la Tierra. Exploran cómo la cantidad de luz solar que la superficie de la Tierra recibe depende de su inclinación y los cambios de posición a medida que gira alrededor del Sol, y cómo estos cambios causan las estaciones. En la Experiencia 2, descubren los efectos de las mareas causados por la gravedad del sol y de la luna sobre la Tierra, y aprenden cómo las posiciones de la Tierra, el Sol y la Luna causan los ciclos diarios, primaverales y ciclos de mareas vivas y muertas en el océano. Los principales TEKS de contenido cubiertos en este tema son los siguientes: 6.9A: Modelar e ilustrar cómo la Tierra inclinada gira alrededor del Sol, causando cambios en las estaciones del año. 6.9B: Describir y predecir cómo las posiciones de la Tierra, el Sol y la Luna causan ciclos diarios, primaverales y ciclos de mareas vivas y muertas en el océano debido a las fuerzas gravitacionales. Los principales TEKS de Prácticas de ciencias y de ingeniería y de temas y conceptos recurrentes cubiertos en este tema son los siguientes: 6.1G: Desarrollar y usar modelos para representar fenómenos, sistemas, procesos o soluciones a problemas de ingeniería. 6.5A: Identificar y aplicar patrones para comprender y conectar fenómenos científicos o para diseñar soluciones. Para iniciar este tema, los estudiantes consideran un fenómeno en la Gran Barrera de Coral, el sistema de arrecifes de coral más grande del mundo, en el cual los corales se reproducen al mismo tiempo cada año en un desove masivo. Los estudiantes consideran el papel que la duración del día, la altura de las mareas y la temperatura del agua juegan en determinar cuándo desovan los corales. Una de las mejores maneras para que los estudiantes comprueben lo que han aprendido es explicándoselo a otra persona. Pregúntele a su estudiante sobre sus experiencias en la clase y pídale que le explique el contenido que está aprendiendo en la escuela, usando sus propias palabras o su idioma materno, si es necesario. Las investigaciones han demostrado que a los estudiantes les va mejor en la escuela cuando tienen el apoyo de quienes los rodean. familiarizan con las cuatro capas de la Tierra y describen sus diferentes características. Finalmente, en la Experiencia 3, exploran cómo se forman y cambian las rocas sedimentarias, metamórficas e ígneas a través del ciclo de las rocas. Los principales TEKS de contenido cubiertos en este tema son los siguientes: 6.10A: Diferenciar entre la biosfera, la hidrosfera, la atmósfera y la geósfera, e identifique los componentes de cada sistema. 6.10B: Modelar y describir las capas de la Tierra, incluyendo el núcleo interno, el núcleo externo, el manto y la corteza. 6.10C: Describir cómo se forman y cambian las rocas metamórficas, ígneas y sedimentarias a través de procesos geológicos en el ciclo de las rocas. Los principales TEKS de Prácticas de ciencias y de ingeniería y de temas y conceptos recurrentes cubiertos en este tema son los siguientes: 6.1G: Desarrollar y usar modelos para representar fenómenos, sistemas, procesos o soluciones a problemas de ingeniería. 6.2A: Identificar ventajas y limitaciones de modelos, tales como su tamaño, escala, propiedades y materiales. 6.5E: Analizar y explicar cómo fluye la energía y los ciclos de la materia a través de los sistemas y cómo la energía y la materia se conservan a través de una variedad de sistemas. Para iniciar este tema, los estudiantes determinan de dónde proviene la lava. Considerarán los procesos que forman la lava y la hacen erupcionar desde la superficie de la Tierra. Una de las mejores maneras para que los estudiantes comprueben lo que han aprendido es explicándoselo a otra persona. Pregúntele a su estudiante sobre sus experiencias en la clase y pídale que le explique el contenido que está aprendiendo en la escuela, usando sus propias palabras o su idioma materno, si es necesario. Original Text: SEP Analyze and Interpret Data In watermelons, round fruit shape (R) is dominant over elongated fruit shape (r), and green color (G) is dominant over striped color (g). A watermelon that is heterozygous for both traits is crossed with a watermelon with elongated, striped fruit. Draw and complete a Punnett square of the cross and determine the predicted genotype and phenotype ratios of the F1 generation.

Updated Text: SEP Propose Solutions Supported by Models A farmer wants to grow round, green watermelons. In watermelons, round fruit shape (R) is dominant over elongated fruit shape (r), and green color (G) is dominant over striped color (g). Draw and complete a model of possible dihybrid crosses using dihybrid Punnett Squares. Propose a solution for the farmer by using your model to predict which parent phenotypes will produce round, green watermelons. Your solution should be consistent with scientific principles and theories.

Link to Updated Content:

[View Updated Content](#)

Original Text: 22. Sample answer: Atoms that gain electrons become larger and the charge becomes more negative. Atoms that lose electrons become smaller and the charge becomes more positive.

Updated Text: 22. Sample answers: a. A lithium ion ( $\text{Li}^+$ ) has 3 protons and either 3 or 4 neutrons located in its nucleus, and 2 electrons in its electron cloud. A neutral lithium atom ( $\text{Li}$ ) also has 3 protons and either 3 or 4 neutrons located in its nucleus. But unlike  $\text{Li}^+$ , a neutral lithium atom has 3 electrons in its electron cloud. b. Atoms that lose electrons become smaller and the charge becomes more positive. This pattern makes sense in analyzing the ion and neutral atom of lithium. The lithium ion has one fewer electron and is thus smaller than its parent atom. Electrons have a negative charge, so losing an electron results in a charge that is more positive. For a lithium ion, the resulting charge is  $1+$ .

[View Updated Content](#)

Original Text: 50. THEME Matter and Energy Sample answer: Burning coal heats up water in a boiler that produces steam. The energy of the steam spins the blades of a turbine, which is then used to power a generator, converting mechanical energy to electrical energy. The generated electricity begins its journey to households through the transmission system. It is made available at a safe rate in the outlets of the house, where an electronic device, such as a music player, is plugged in. The electronic device transforms the electrical energy into sound energy as music.

Updated Text: 50. SEP Use Mathematics The current through R1 is 1 A. The current through R2 is 0.5 A.

Updated Text: 75. SEP Use a Cost-Benefit Analysis Answers will vary. Answers may discuss Luigi Galvani's research on bioelectricity and how that led to Alessandro Volta's invention of the voltaic pile, an early form of the electric battery that led to the batteries we have today. Answers may also include the work to slow or eliminate battery degradation. Battery research, use, and potential is constantly increasing with the move away from combustible natural resources for energy to renewable sources (i.e. solar, wind, hydro, etc.). As the need for batteries increases in the field of electronics, automobiles, tools, accessories, etc., research is being conducted to find a cost effective battery system that can help the world rely less on nonrenewable natural resources and more on efficient and possibly renewable battery sources. Mining for rare minerals also has negative effects and resources can be limited, driving research towards efficient batteries that can be reused or recharged. The need for portable devices drives the need for more compact batteries, leading to batteries, such as the lithium ion batteries.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Updated Text: 55. SEP Use a Cost-Benefit Analysis Answers will vary. Students should provide research from NASA and other sources showing how a cost-benefit analysis applies to telescope technology, such as the historic Hubble Space Telescope and the current James Webb Space Telescope. Their analysis might explore things such as the need to apply a new lens to Hubble and the benefits of new scientific discoveries compared to the cost of constructing and launching the telescopes. Students may describe the social and scientific value of these telescopes while also listing potential financial costs as well as how the resources used to build and launch the telescopes affect the environment as well as other social and economic impacts.

Current Page Number(s): 2.22-2.23

Location: Teacher Edition, Unit 2, Activity 4, "Reading to Learn" Step 8 (PDF pg. 22- 23)

Original Text: **TRR Approved New Content**

Updated Text: (replaced step 8 added steps a-i)

8. Distribute the (green text) **Identify Materials Hunt** printable, have students use the printable to identify materials around the classroom. a. **Say:** Find something that is the same plastic material as the bubble wrap.

b. Direct students to the first row of their (green text) **Identify Materials Hunt** printable.

c. **Ask:** How could we record the property of this plastic item? (red text) (**Check the box for "plastic."**)

d. **Say:** What we just did is called recording the observable property of material. Now it's your turn.

e. Allow students time to locate objects and record the material they are made of.

f. **Say:** Find something that is the same metal material as the muffin tin.

g. Allow students time to locate the materials and name their objects and the material they are made of.

h. **Say:** Find something the same glass material as the marble. i Allow students time to locate the materials and name their objects and the material they are made of.

Updated Text: (replaced text 1-10)

1. Explain to students that they are going to grow their own plants. The type of plant they will grow is called a cress plant.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

2. Give each student a 9-oz plastic cup containing approximately one cup of potting soil.
3. Sprinkle the soil in each student's cup with 10–15 cress seeds.
4. Let them use a water spray bottle to lightly spray the soil with water (2–3 sprays) and then place their cups on a window sill.
5. Explain to students that they will spray their seeds each day and draw a picture of what they look like.
6. Ask: What need are we helping the cress plants meet by spraying them each day? (red text) **(water)**
7. Distribute the Cress Plant Journal printable.
  - a. Have students record their drawing for the day under "Day 1" in their printables.
8. Ask: Where should we try to put the plant? (red text) **(somewhere it can get sunlight and air)**
9. Ask: Why do you think the seeds are being planted in soil? (red text) **(Plants need nutrients to grow, and soil contains nutrients for the plant.)**
10. **Say:** *Soil provides plants with nutrients needed to grow and survive, we will be able to observe what plants need as they grow in the soil.*

Current Page Number(s): 1.58

Location: Teacher Edition, Unit 1, Week 4, Activity 1 (PDF pg. 1)

Original Text: **TRR Approved New Content**

Updated Text: (added text steps 5, 6, 7) 5. Show students the image Civil Engineer. a. Explain to students that there are different types of engineers who design different things. This image shows a type of engineer who designs structures. They design dams, roads, buildings, bridges, and factories. 6. Say: I'm going to show you three other types of engineers to explore and some human-made objects. Use clues from the images to match a design to each type of engineer. 7. Display the Different Engineers image to the class. a. Allow students to work in small groups or partnerships to match the objects to the engineers. b. If students struggle to match the images, point out the names of the engineers and their similar words (e.g., mechanical and machine, electrical and electricity, aerospace and airplane, etc.) or call attention to clues from the images, like wires, gears, or the jet.

Original Text: **TRR Approved New Content**

Updated Text: (added text Collaborative Learning)

1. Group students into pairs or small groups. Option: Decide on drawings as a class and do this activity as a whole group.
2. Direct students' attention to the image of the giraffe and children that accompanies Activity 3 in their student editions.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

3. Remind students that the giraffe is an organism and that the bodies of the giraffe and children are all examples of systems.
4. **Ask:** What conditions or factors could cause the giraffe to change?
5. Explain to the students that the giraffe having no access to food or water, aging, or being injured could cause the giraffe to change.
6. **Ask:** What conditions or factors could cause the giraffe to stay the same?
7. **Say:** *Having access to food and water and being in a safe environment that keeps the giraffe from being hurt or injured could cause the giraffe to stay the same.*
8. **Ask:** What conditions or factors could cause your body to stay the same or change? (bold red text ->) **(Having access to food and water, being safe, or aging.)**
9. Pair students with a science partner.
10. **Say:** *Think of your favorite organism, like a dog, cat, or bird. Tell your science partner what could cause that organism to change or stay the same.*
11. **Say:** *Now think of a system in your life, like a bike, scooter, TV, or phone. Tell your science partner what could cause that system to change or stay the same.*
12. Have students draw a picture of the organism and system in their student editions.
13. **Say:** *Organisms like plants, animals, and humans sometimes change and sometimes stay the same.*
14. **Say:** *Objects, organisms, and systems change or stay the same based on many factors or conditions in their environments. Scientists study these changes.*

## 1. Experience Together

After your student learns about the phenomenon in class, watch the phenomenon video together. Ask them questions, like “What do you think causes this?” Encourage them to share their predictions. Discuss what the video makes you think of, such as memories or personal connections.

## 2. Explore Together

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Explore the unit content, including the activities, articles, and “TEKS Explained” articles. You may also use the audio feature to listen together. If your child has already submitted the online activities in class, you’ll be able to read through their answers. Encourage them to discuss and explain their ideas.

### 3. Learn Together

You can find the media content for the unit at the bottom of each activity under “Explore More.” Let your child become the teacher! Ask them to explain how the media content connects to what they are learning in class.

### 4. Review Together

After your child has taken the assessment in class, read through each question together. Offer praise and support. Encourage them to think through their answers aloud. Help them navigate through the unit to find evidence to support their existing ideas or develop new ones. You can also use the assessment tool to communicate with your child’s teacher regarding questions about the assessment.

### 5. Play Together

Navigate to the unit’s Crossword or Misspilled. Complete these games with your child to reinforce vocabulary from the unit. As you play, encourage your child to recall concepts they’ve learned relating to the words.

**Component: *Texas Science Studies Weekly: K Grade Teacher Edition with Online Access***

#### 1 Preparation

Prepare all written and technological tools previous to testing, in order to minimize potential interruptions. If possible, test the connectivity of your electronic devices. If devices are battery powered, ensure that the batteries are all full.

#### 2 Accommodations

Provide accommodations to eligible students only according to their Individualized Education Plan, or IEP. Do not prompt or hint during the duration of the assessment. Do not assist students in constructing or rephrasing their responses.

#### 3 Privacy

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

To ensure accurate assessment results, space student desks apart or use privacy folders/offices. This can also help to limit distractions.

## 4 Distractions

Have students clear their test-taking space of books or other materials. Limit phone calls and/or traffic in and out of the classroom. Place a “Testing” sign on your classroom door to help promote a distraction-free zone. Prompt students to remain seated while you pass out and collect testing materials. Provide additional instructional activities for fast-finishers. Try to keep the room at a comfortable temperature and be aware of background noises that could distract students.

## 5 Monitoring

Ensure that there is no talking during the test. Allow students to take breaks as needed. If students request help relating to the assessment’s content, respond neutrally with, “I can’t answer that for you; just do your best.” Provide any and all technical assistance necessary during electronic assessments.

## 6 Stress-Management

Prior to testing, have students participate in an activity to manage testing anxiety. Have students engage in an easy physical activity like Superbrain Yoga®. This is a research-based<sup>1</sup> practice that has positive impacts on working memory and attention. Have students hold their ears with opposite hands, thumbs facing forward as they perform squats. You can also encourage parents and students to prepare for testing with a good night’s sleep and protein-rich breakfast.

## 1 Preparation

Prepare all written and technological tools previous to testing, in order to minimize potential interruptions. If possible, test the connectivity of your electronic devices. If devices are battery powered, ensure that the batteries are all full.

## 2 Accommodations

Provide accommodations to eligible students only according to their Individualized Education Plan, or IEP. Do not prompt or hint during the duration of the assessment. Do not assist students in constructing or rephrasing their responses.

## 3 Privacy

To ensure accurate assessment results, space student desks apart or use privacy folders/offices. This can also help to limit distractions.

## 4 Distractions

Have students clear their test-taking space of books or other materials. Limit phone calls and/or traffic in and out of the classroom. Place a "Testing" sign on your classroom door to help promote a distraction-free zone. Prompt students to remain seated while you pass out and collect testing materials. Provide additional instructional activities for fast-finishers. Try to keep the room at a comfortable temperature and be aware of background noises that could distract students.

## 5 Monitoring

Ensure that there is no talking during the test. Allow students to take breaks as needed. If students request help relating to the

assessment’s content, respond neutrally with, “I can’t answer that for you; just do your best.”  
Provide any and all technical assistance necessary during electronic assessments.

## 6 Stress-Management

Prior to testing, have students participate in an activity to manage testing anxiety. Have students engage in an easy physical activity like Superbrain Yoga®. This is a research-based<sup>1</sup> practice that has positive impacts on working memory and attention. Have students hold their ears with opposite hands, thumbs facing forward as they perform squats. You can also encourage parents and students to prepare for testing with a good night’s sleep and protein-rich breakfast.

## 1. Experience Together

After your student learns about the phenomenon in class, watch the phenomenon video together. Ask them questions, like “What do you think causes this?” Encourage them to share their predictions. Discuss what the video makes you think of, such as memories or personal connections.

## 2. Explore Together

Explore the unit content, including the activities, articles, and “TEKS Explained” articles. You may also use the audio feature to listen together. If your child has already submitted the online activities in class, you’ll be able to read through their answers. Encourage them to discuss and explain their ideas.

## 3. Learn Together

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

You can find the media content for the unit at the bottom of each activity under “Explore More.” Let your child become the teacher! Ask them to explain how the media content connects to what they are learning in class.

## 4. Review Together

After your child has taken the assessment in class, read through each question together. Offer praise and support. Encourage them to think through their answers aloud. Help them navigate through the unit to find evidence to support their existing ideas or develop new ones. You can also use the assessment tool to communicate with your child’s teacher regarding questions about the assessment.

## 5. Play Together

Navigate to the unit’s Crossword or Misspilled. Complete these games with your child to reinforce vocabulary from the unit. As you play, encourage your child to recall concepts they’ve learned relating to the words.

Updated Text: Safety: Handle all materials with care. Use the thermometer only as intended. Students demonstrate safe practices during the field investigation by not looking directly at the Sun when collecting observations. Students will wear close-toed shoes and can choose to wear a hat and/or sunscreen for Sun protection.

Proclamation 2024: Report of New Content (08/25/2023)

Page 1614 of 1830

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Procedure:

In the classroom:

1. Discuss with a partner what are some safety considerations when going outside for a field investigation to collect weather data. Discuss why it is important to not look directly at the Sun when collecting observations about weather.
2. Create a rain gauge with a ruler, permanent marker, and clear plastic cup.
3. Using a ruler and a permanent marker, starting from the bottom of the cup, mark one centimeter increments on the outside clear plastic cup.
4. Attach the cup to the top of the pencil with tape.

Outside Field Investigation:

1. Following the safe practices discussed previously, go outside and place the pencil of the rain gauge in the ground on a level surface area that is free from trees, roof, or other cover. Measure the precipitation currently in the rain gauge. Observe and record other weather conditions including wind and cloud coverage
2. Measure and record the temperature outside with a thermometer.
3. Go outside at about the same time every day to check the temperature and observe the rain gauge, following safe field investigation practices. Observe and record other weather conditions including wind and cloud coverage.
4. Use the data to create a simple graph showing the temperature each day. Then create a simple graph showing the rainfall for each day.
5. Analyze the data identifying any patterns or relationships between amount of rain and temperature over the week. How was the temperature similar or different from day to day?
5. Evaluate the rain gauge created for this investigation. What criteria should be used to determine if the rain gauge worked as intended? Did it work the way it was intended? What could be improved in the design?

Updated Text: Scientific and Engineering Practices (SEPs) Introduction- Science Is Discovery slide 21  
Students will use the Scientific and Engineering Practices (SEPs) Introduction - Science Is Discovery slide 21 to review scientists and engineers who have helped people and our environment. Students will identify which of the 4 individuals is an engineer (Alexander Graham Bell). They will discuss with the class how the invention of the first practical phone has impacted our society today.

Groups will use the engineering design process to design and build a communication device that solves a problem in their life. They will then share their device with the class and seek feedback to make improvements.

Updated Text: What do you think of when you learn that a person is a product engineer? What do you think they do? Why?

Read the information below to learn more about product engineers, the problems they solve, and why they are important.

Reusable Grocery Bag

A product engineer is like a creative problem solver and an inventor who designs and develops amazing things that we use every day. Imagine you have a favorite toy or a cool gadget you love playing with - chances are, a product engineer helped create it! These talented professionals use their knowledge of science, technology, engineering, and math to come up with new ideas and turn them into real products.

Think about the problems that a product engineer might be asked to solve. Imagine the solutions to those problems and then create a drawing to demonstrate a possible solution. Share your ideas with a partner and discuss what a product engineer does.

Updated Text: Mini Lab - To describe the Sun as a star that provides light, students will investigate the question: Is light provided by lightbulbs different from light from the Sun?

Students will paint a picture on black construction paper using sunscreen SPF 45 or higher. They will then place their drawings under different light sources in the classroom such as flashlights, lamps, and fluorescent lights. They will then place drawings outside in the sunlight. After several hours, students will observe the effects of different light on the paper and discuss how the Sun is a star that provides light to Earth, which is different from light from lightbulbs. The following sentence frames can be used to support student thinking and discussion:

Light provided by lightbulbs is (different/not different) from the light outside because...

When I look at the drawings from outside/inside, I observe ...

The reason the indoor lights had a different effect than light outside is...

Extend Thinking: What effect did sunscreen have on the paper? Why is this important?

Proclamation 2024: Report of New Content (08/25/2023)

Original Text: New Content

Updated Text: Inquiry - In first grade, students learned about heat and the effects of heating and cooling in materials. Students learn in 2nd grade that temperature is a measurement of heat and can be used to describe weather.

To describe the Sun as a star that provides heat, students will work in groups to investigate the question, "Does the Sun provide heat?"

Student groups will place a thermometer in a shaded area outside next to an ice cube in a cup. At the same time, each group will place a thermometer in direct sunlight next to another cup with an ice cube inside. Every few minutes, student groups will measure the temperature in both locations and record the data in their science notebook. Students will also draw a picture showing the condition of the ice cubes in each location every time they record the temperature. After at least 15 minutes of recording data, students will discuss and compare their observations with another group to identify significant features and patterns. Students respond to the inquiry question and can use these sentence frames as needed to organize their thoughts:

The Sun is a star that (does/does not) provide heat.

I know this because... My evidence is...

The temperature in the shade/in the sunlight...

The ice cube in the shade/in the sunlight...

Updated Text: In this activity, you will choose two different animals. On a t-chart, record and compare how the structures and behaviors of the two animals help animals find and take in food, water, and air.

Example:

Bird

Dog

Differences

A bird has a beak that is long and pointy so the bird can collect seeds and eat worms

A bird has a beak to collect water off of leaves.

A dog has sharp teeth to eat meat and veggies.

A dog has a tongue to drink water.

Similarities

A bird and dog have nostrils to breathe in air.

[View Updated Content](#)

Original Text: New Content

Updated Text: Present students with the following problem: During a heavy rainstorm, a student notices how much water runs off of his house to the ground. They wonder if this water could be collected and used in different ways that would conserve this natural resource.

Have students use engineering practices to design a water collection system and explain how this solution would minimize the environmental impact of the use of a natural resource. Students should define the problem and then imagine the possible solutions. Students share their ideas with a partner to collaborate and make a plan for one design. Partners then create a prototype or model of their design and test it to determine if it works as intended. Partners use class established criteria to evaluate their design solution and make improvements based on the results of their test. Students should continue to use the engineering design process to improve their design solution as needed.

Groups will propose a solution to the problem and support it using data and models from their engineering design process. Students then explain how the collected water can be used in everyday life to conserve this natural resource.

Beyond the Classroom: Ask students what connections they can make between their experiences and the real world. Give students time to generate ideas about other innovative solutions involving the conservation, recycling, or proper disposal that minimize the environmental impact of the use of natural resources. Have students explain how these innovative solutions impact society.

Updated Text: Incandescent, LED and compact fluorescent lightbulbs

1. Three different lightbulbs are shown in the image above. Incandescent bulbs invented in 1879 are only 10% efficient in converting electrical energy to light energy. Compact fluorescent bulbs created in 1976 are 85% efficient and LED bulbs invented in 1962 are 90% efficient. Discuss how the invention of the different lightbulbs have impacted society.

Updated Text: Robert L.B. Tobin Land Bridge

Located in San Antonio, Texas

Working with a partner, observe the image of the land bridge located in San Antonio, Texas. Transportation engineers designed and built the land bridge over this major roadway to reduce the impact of construction on local ecosystems.

Discuss how this innovative solution has impacted society and develop a model to explain how land bridge supports the interactions necessary for the survival of biotic factors in the ecosystem. Use your model to explain your findings to a partner.

Updated Text: Food Web

This terrestrial food web shows the flow of energy in an ecosystem. An invasive species of snake migrates to this ecosystem after a drought reduces the food supply in its natural habitat. This invasive species mostly consumes mice.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Use proportion to describe this system:

Describe the proportion of consumers that get energy from mice in the ecosystem, not including the new snake species.

Compare the proportion of producers and consumers in this ecosystem.

Predict what proportion of consumers will be negatively affected by this change.

Updated Text: Students will work with a partner to plan a descriptive investigation to test equal and unequal forces on common classroom objects. Students use their observations from previous learning experiences to craft the investigable question, create a plan that includes a method for collecting data and observations. Students conduct the descriptive investigation, collect data, analyze the data, and prepare their findings to present to the class. During the investigation, groups should reflect on the concepts of: how energy is being transferred, what patterns do they observe in the motion of the objects and what connections can be made between force, motion, and the transfer of energy.

Link to Updated Content:

[View Updated Content](#)

Original Text: New Content

Updated Text: Pages 1-3 "Learning Objective: Students will construct a cup that conserves thermal energy by using their knowledge of thermal energy transfer and the engineering design process. Background information: Insulators are used to prevent the flow of thermal energy between sources. According to Kinetic Molecular Theory, particles are in constant random motion. In the case of a warm drink, insulation minimizes heat transfer from the warmer liquid to the cooler air outside the cup. For example, when the warmer particles in hot chocolate collide with an insulated cup, heat transfer is restricted and slows the flow of energy from a warmer to a cooler environment located outside the cup. A hot drink with no lid will cool down quickly because the particles of the hot drink will begin to slow down as they transfer their energy to the cooler air. When a lid is on an insulated cup, the drink will stay warmer than an insulated cup with no lid. Why? The energy of the particles in the hot drink will stay more active because the lid and insulation prevents the flow of energy from a warmer to a cooler environment. Insulators reduce the movement of thermal energy by using the principles of conduction, convection, and radiation when designing a cup. Conduction: Insulators have low thermal conductivity, which is important since conductors transfer thermal energy very quickly and easily. When thinking about designing a cup, think of ways to minimize the effects of conduction, or heat energy transferring to the outside air through direct contact. Convection: By transferring heat energy by moving through a fluid, think about ways to reduce air circulation and minimize the effect of convection in cooling down the drink. Radiation: By transferring heat energy through electromagnetic waves, think of ways that the surface of your insulator can prevent radiant heat loss from the liquid. Materials: hot plate (to warm water), foam cups (2 per group, duct tape (10 cm per group), aluminum foil (10 cm per group), cotton balls (10 per group), rubber bands (10 per group), felt fabric (6" x 6" per group), wool fabric (6" x 6" per

group), polyester fabric (6" x 6" per group) Scenario: A company has hired your team to design the cup that will hold heat the longest compared to its competitors. The campaign slogan is "The Warmest Cup" and will be featured in all marketing materials. Will your engineering team design and construct "The Warmest Cup"? Tasks: With your team, you will complete each step and revisit any steps needed in the engineering design process to construct "The Warmest Cup." Ask: Identify the Need and Constraints What is the problem to solve? What are the limitations? Research the Problem: (added image of Kinetic Molecular Theory Heat Transfer Model) Based on Kinetic Molecular Theory, particles are in constant random motion. As they collide with each other, energy is transferred in the form of thermal energy. As collisions increase, more energy is transferred from one substance to another. How does the Kinetic Molecular theory apply when creating an insulated cup? Communicate with people already involved in the insulated-cup industry. Research and read how cups prevent the transfer of thermal energy and which ones hold energy the longest." ... "Presentation: Create a presentation of your choosing to summarize your data and display your findings. Be sure to include a summary of how your prototype utilizes the methods of thermal energy transfer, including convection, conduction, and radiation. Be sure to support your solution by citing the principles in Kinetic Molecular Theory." ...

Original Text: New Content

Updated Text: A la hora de desarrollar, debatir y organizar soluciones como las enumeradas anteriormente, es importante que todos los implicados sean capaces de comunicarse eficazmente con quienes les rodean. Esto puede significar trabajar en equipo o individualmente. Por ejemplo, una persona puede ser responsable de pedir ayuda. Tendría que ser capaz de trabajar por su cuenta para producir diversas formas de ponerse en contacto con la gente, como carteles, entrevistas radiofónicas, informes, folletos y presentaciones. También deberán ser capaces de ofrecer información en distintos lugares, como escuelas, lugares de trabajo, edificios comunitarios, etc.

Updated Text: New text and graphic at top of page as follows;

Each of these plant systems interact with each other, ultimately, to facilitate the process of reproduction. The Transport Systems provide water and minerals absorbed by the Roots and delivered through Xylem vessels. Photosynthesis (in the leaf) produces Glucose for respiration, supplied via the Phloem in the form of Sucrose. These substances allow the reproductive structures that make up the flower to grow, developing the male and female gametes (pollen and ovum) and in producing the fruit structures around the seed one the flower has been pollinated – it is even more important at this stage for the fruit to have sugars delivered through the phloem if the fruit is to taste sweet!

The Response Systems ensure that flowers are produced at the correct time of year, responding to temperature, daylight hours, etc, and that flowers are open during daylight hours to maximise the chances of pollination.

Updated Text: Add before current text as follows;

Students should use the information from slides 5 and 6 (these may be printed and given as handouts) and conduct further research in order to produce a 3-dimensional model of a plant cell. This task should be given adequate time to complete and allows students to use their imagination in deciding how best to display the information in a 3-D model and choosing scale, materials and colors. Have students present their homework to class and explain what type of data is presented.

Discuss as a class different model types to organize qualitative data using student-prepared models.

Have students form small groups and critique one another's models. Each group presents their best model to the rest of class. Each group votes for the best model. (A group may not vote for their own model). Once the winning model has been chosen, review it as a class and highlight why it presents the qualitative data well. What are the model's advantages and limitations.

Original Text: New Content

Updated Text: Add to end of current text as follows;

All scientific communication relies on respectful consideration for other peoples' arguments and viewpoints. We must always be mindful to show respect for these points of view, even when we might not agree with them, and engage in respectful argumentation utilizing applied scientific explanations to the appropriate level for the audience. Have students work in small groups and create a script and act out a scene to show how, during scientific argumentation they must apply scientific explanations and empirical evidence and always be respectful. Students can create a second scene to show what can occur when people do not engage respectfully in scientific argumentation.

Copy and Pasted text below:

**DIRECTIONS** Read the following article about the standard of living. Then research the annual salary of a career you could be passionate about before answering questions on how it compares with the life you hope to live.

**Living the Dream** Discovering what you're passionate about and what you want to do in life is a complex process and can be a little intimidating. But don't worry! You don't need to figure it all out right away. Many adults out there are still trying to figure that out. However, one of the key factors you should keep in mind as you begin to think about what career you might want to pursue is how it ties to the rest of your life. Throughout your life, you'll experience hobbies, relationships, travel, and more. A job is just one piece of the whole puzzle that makes up your life. The thing to remember is that the job piece of the puzzle will help fund all those other things. Without an income from your work, you won't be able to buy a house, go on that European vacation, or pay for your wedding. The career you decide to pursue should be something you're passionate about, but it should also provide for the other things in life. The Standard This balance is called the standard of living. And each person's standard of living is a little different depending on what their goals are.

Your personal standard of living ties directly to the things you value in life. For example, if you're passionate about traveling to other countries, your standard of living should include the extra costs of travel, lodging, and food. For some people, buying a house is an absolute must, while others might be content to rent an apartment forever. These are two different standards of living and each carries a different cost. But what happens when the job you're passionate about doesn't pay for the standard of living you want? Typically, people get frustrated, lose passion, and make decisions that could negatively impact their future (like looking to debt as a way to solve the problem

**Realistic Expectations** As you start to think about the kind of career you want in the future, it's important to compare it to your desired standard of living. But you have to be realistic in the process. Everyone would probably say they'd love to

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

have a million dollars in the bank and a beach house in the Mediterranean, but that's not a realistic standard of living to start out with.

You want to start with a standard of living that covers your Four Walls and meets your basic needs. Then you can expand the standard from there. When you create reasonable values and pair them with a job that'll allow you to accommodate those values, you can have the freedom to pursue the job you're passionate about while still fulfilling those desires. And the great thing is, your standard of living can grow as your income does. So, if you value eating out with friends, you'll want to look for a job path that'll give you the income to do that.

As you begin to look toward the future, you can connect the different pieces of your life and combine them to create a life you enjoy, you're passionate about, and you can afford.

1. What's one career you're potentially interested in? Answers will vary but your students should choose something they are passionate about and would enjoy.
2. What's the average annual salary for this career? Answers will vary but students should be able to research an income range for that career.
3. List some values you have in your life. Answers will vary but could include traveling, being charitable, or spending time with friends
4. List some hobbies you're interested in. Answers will vary but could include golfing, art, hiking, or collecting.
5. On average, how much could these hobbies cost you a month? Answers will vary but students should give their best guess about the cost of their hobbies.
6. What are some specific dreams you have for your future? Answers will vary but might include owning a home, buying a specific car, getting married, or having kids.
7. Based on your values, hobbies, and dreams, do you think the career you chose would give you the standard of living you're hoping for? Explain why? Answers will vary but students should give a realistic answer, having critically thought through the financial impact of their values, hobbies, and dreams.

Procedure PART 1: READ Students will read the article What to Do if Your Identity Is Stolen by George Kamel and learn the steps they need to take if they become victims of ID theft. PART 2: ANSWER Using the information in the article, students will answer questions that demonstrate their understanding of dealing with identity theft. PART 3: RESEARCH

Proclamation 2024: Report of New Content (08/25/2023)

Page 1654 of 1830

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Students will read through both the National Identity Theft Checklist (<https://www.identitytheft.gov/#/Steps>) and Texas' Identity Theft Victim Kit ([https://www2.texasattorneygeneral.gov/files/id\\_theft/IDTheft\\_kit.pdf](https://www2.texasattorneygeneral.gov/files/id_theft/IDTheft_kit.pdf)) and answer the questions based on their research.

What to Do if Your Identity Is Stolen Ever wake up in the morning hoping to deal with a stolen identity? No? Me either. But it can happen to anyone—in fact, it's happened to me. When ID theft happens, it could mean some weirdo's using personal details like your Social Security number or bank account to do anything from going on shopping sprees to filing a tax return in your name. Getting everything back to the way it was can be intimidating—like a months-long effort to climb over a mountain. How do you even begin to put things straight? As someone who's been through it, take it from me: You can get your life back. And we're going to walk with you through some practical steps to get that done.

Here to Help Luckily, you don't have to do this alone. There are multiple groups and companies that'll help protect you from any possible fraud or walk with you if you experience fraud.

- **Federal Trade Commission (FTC):** The FTC is the primary federal agency responsible for protecting consumers against identity theft. Its job is to enforce laws regarding consumer protection, investigate fraud claims, and help educate you about what steps you can take to protect yourself.
- **Consumer Financial Protection Bureau (CFPB):** The CFPB is focused on safeguarding you, as the consumer, against any deceptive or fraudulent practices that might happen to you by a company, specifically a financial institution.
- **State Attorney:** Each state has an attorney general's office, which includes an identity protection division. They will investigate and even take legal action on claims made within their specific state.
- **Identity Theft Services:** There are hundreds of companies that offer identity protection products and services. These are typically designed to monitor your accounts and credit records, alert you of potential fraud, and possibly offer insurance in the event of fraud.

These are all helpful resources to help you through an experience with fraud, but what should you do first if you experience fraud?

How to Know if Someone Stole Your Identity First things first. Having your identity stolen isn't always something that's immediately obvious. There are certain things to look for if you have a sense that this might have happened to you. Lots of things could happen that would strongly indicate somebody's gotten ahold of your info and used it to do fraud. None of the following signs on their own would prove you're a victim of theft (could just be an error), but if you notice one or more of these, it's definitely time to check. (We'll talk next about steps to check for ID theft.)

- Getting calls from debt collectors about accounts you didn't open
- A charge on your credit card statement you don't recognize
- Medical bills you don't recall, or medical denials you weren't expecting
- Paper bills no longer coming in the mail
- Your credit card statement listing a new account you don't know
- A rising credit score even though you've initiated no new debt
- A dipping credit score even though you're current on all payments
- Being unexpectedly denied for a loan
- Having your tax return rejected (because some thief already filed on your behalf to get your return) or receiving a tax transcript you never requested

Again, if one or more of those has come to your attention, there are two key steps you should take right now to see whether your ID has been stolen:

1. Check all bank and credit card statements. That's something you ought to be doing all the time anyway. But especially if you have a suspicion that you've been a victim of ID theft, go over all the statements closely and carefully.
2. Run a free credit report on yourself. You're entitled to one free report every year from each credit agency (so that's three free reports per year). This is a quick and easy way to find ID theft.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Hopefully you're not gonna find anything. But in case you do discover evidence of ID theft, don't panic! At this point, the next logical step is to figure out how to prove that your identity was actually stolen so you can prepare to get your life back and start to recover.

How Can I Get My Life Back After Identity Theft? Having your identity stolen is a serious violation, and if there's been a financial impact on top of the ID theft, it can really get you down. I understand this firsthand. It sucks. But I'm here to give you some hope for what's ahead, and some practical steps to get things back to normal. So keep this in mind: You can get out of this mess and restore control of your personal information. Here's what you need to do:

- 1. ASK FOR A FRAUD ALERT TO BE PLACED ON YOUR CREDIT ACCOUNT.** If you discover you've been a victim of identity theft, contact one of the three main credit bureaus (Experian, Equifax, and TransUnion) and have them place a fraud alert on your information. Once you've contacted one agency, they'll let the other two know. Having a fraud alert in place is helpful if you were involved in a data breach or had your Social Security card, driver's license, or bank account information stolen. If someone tries to apply for a loan or new credit card with your info, the credit bureau lets creditors know an extra security check needs to happen to confirm the applicant's identity.
- 2. PUT A FREEZE ON YOUR CREDIT REPORT WITH ALL THREE CREDIT BUREAUS.** Putting a freeze on your credit report is different from a fraud alert because it cuts off anyone from getting access to your credit report without your permission. With a credit freeze, you'll have to contact all three credit bureaus individually, but it's still free! Once your credit report is frozen, the credit bureaus can't release your credit information without your permission to lift the freeze, and you'll have to do that either over the phone, online, or in writing. You'll want to lift the freeze if you're applying for a job or moving to a new home and your credit report needs to be checked.
- 3. FILE A POLICE REPORT.** Since it is a crime to steal someone's personal identity and use it to commit a fraudulent act, you should file a police report. Even if it looks like the thief is operating online or in a different country, you should still contact your local police department to file a report.
- 4. FILE A REPORT WITH THE FEDERAL TRADE COMMISSION (FTC).** When it comes to identity theft, time really is money. Your next step is to make sure you've notified the Federal Trade Commission of your stolen identity through their online service. If you report your identity theft to the FTC within two business days of discovering it, you will only be liable to pay \$50 of any unauthorized use of your bank and credit accounts (under federal law). The longer you leave it, the more that financial liability falls on your shoulders. Once you've filed your report, you'll be able to put together your own recovery plan with their help, along with some assistance in each step. Just get ready to buckle in for a long journey.
- 5. CHECK YOUR BANK AND CREDIT CARD STATEMENTS AND CREDIT REPORTS.** Take some time to comb through your bank account and credit card statements, along with your current credit report. You can request your credit report for free from each of the reporting agencies through [annualcreditreport.com](https://annualcreditreport.com) once a year. Stagger these so you can check one credit report every four months. Look at these documents and flag anything that screams, "I didn't open that account!" Now is the time to highlight them to help your case.
- 6. GET ANY FRAUDULENT ACCOUNT RECORDS FROM DEBT COLLECTORS.** Don't ignore any letters or calls you may receive from debt collectors following an identity theft. Stay ahead of the game by informing them in writing of your identity being stolen. You should also give them a copy of your FTC report to back it up. Here's what you can ask from debt collectors when you write to them:
  - Ask to see any information (from the telephone number used by the fraudster to open the fake account to copies of application forms and statements listing fraudulent transactions) they might have on you resulting from the identity theft.
  - Ask them to stop contacting you with collection notices that you don't owe. Let's face it: No one likes hearing from debt collectors—but especially not when it isn't your fault in the first place! Remember: You are within your rights to obtain written information about that debt—but you have to put your request in a physical letter to the debt collector. The FTC even provides sample letters for you. And if you're looking for extra peace of mind, send your letter with a certified mail receipt so you can track when they've received it.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

7. **CONTACT YOUR BANK'S FRAUD DEPARTMENT.** Your bank has a fraud department, so call to tell them what happened. They'll let you know what steps to take regarding your current bank account. They might even advise you to close your accounts and open new ones if it means limiting the damage of the theft.

8. **CONTACT YOUR UTILITY PROVIDER AND OTHER ACCOUNT FRAUD DEPARTMENTS.** Fraudsters can use your information to set up anything from medical insurance to utilities in your name. I know—it's ridiculous. If any utility providers, credit card companies, loan specialists, debt collectors, or insurance companies are sending you bills for things you don't actually owe, you need to reach out to them ASAP and let them know your identity was stolen. Even if you haven't received any bogus bills from your providers or credit card companies, go ahead and contact them anyway. Because if one of your accounts was hacked, chances are, the others are also at risk.

9. **CLOSE ANY FAKE ACCOUNTS THAT WERE CREATED IN YOUR NAME.** Remember how you already combed through your credit report and noted charges that weren't yours? By now, you've contacted the three credit bureaus and the FTC, so it's time to clean up and close down any accounts that have been opened without your knowledge. Reach out to those companies' fraud departments (whether it's a bank, utility company, or insurance provider) and shut down all the accounts falsely opened in your name. Use any FTC reference numbers on your identity theft report to back you up.

10. **REPORT IF YOUR PERSONAL IDENTIFICATION WAS STOLEN.** If identification like your Social Security card, driver's license, or passport is stolen, you should contact the relevant agencies immediately so they're aware of the theft and can start the process of replacing them:

- **Social Security Card:** Contact the Social Security Administration for a replacement online. If you suspect your Social Security number has already been used fraudulently, contact the Office of the Inspector General to report it.
- **Driver's License:** Contact your local Department of Motor Vehicles (DMV) to report the theft and get a replacement.
- **Passport:** Contact the U.S. Department of State to report the theft and arrange a replacement.

11. **UPDATE YOUR PASSWORDS AND USERNAMES.** Now it's time to update those usernames and passwords. Change any passwords linked to accounts that were or could be affected by identity theft immediately. If you use the same password for every account you have, it's time to change them all. Your passwords should never match or contain your name or date of birth—that just makes them easier to guess! Things like "password0" and "abc123" just don't cut it anymore. I recommend that you use a combination of upper and lowercase letters, numbers and special characters to keep it complicated and difficult for identity thieves to guess.

12. **LOOK AT YOUR RECOVERY OPTIONS.** By now, you might be starting to realize this whole recovery process can take a few months or even years, depending on how severe the damage is. That's why it's important to take action as soon as you realize your identity has been stolen. The hours involved in getting your identity back really are a huge mountain to climb on your own. But it's never too late to be proactive. Start protecting yourself now so you never have to deal with this!

**DIRECTIONS** Answer the following questions and be ready to share your answers with your class.

1. Since identity theft is not immediately obvious, what are some ways you can protect yourself before it even happens? Answers will vary but might include ideas like using a secure Wi-Fi network, creating strong passwords, often reviewing your transaction history, paying cash for things, setting up fraud protection, being cautious about what you post on social media, or running a free credit report.

2. What types of information should you protect to prevent identity theft? Answers should include sensitive information like your Social Security number, bank account number, debit card number, PIN number, and any mail that might include your personal information.

3. Who should you notify if you find out your identity has been stolen? Answers should include your bank, the three credit bureaus, the police, and the Federal Trade Commission (FTC).

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

4. What are some consequences you have to deal with if you're a victim of identity theft? Answers will vary but might include your accounts being frozen, replacing personal identification cards or account numbers, and the time it takes to file the claims and discover the full extent of the fraud.

5. What agencies and companies can help protect you against fraud? Answers should include the FTC, CFPB, state attorney, or private identity monitoring services.

6. How do these agencies and companies help protect you against fraud? They enforce consumer protection laws, investigate fraud claims, provide education about consumer

7. How can you take responsibility to help prevent identity theft? Answers will vary but might include these ideas: While identity theft is a crime, you are responsible for keeping your information safe and secure, staying on top of your account activity, knowing who has your information and if you trust them, and being aware of how thieves gather information.

8. List out the four steps you should take if you're a victim of fraud and identity theft. 1. Call the companies where you know fraud has occurred. 2. Place a fraud alert and get your credit reports. 3. Report identity theft to the Federal Trade Commission (FTC). 4. File a police report.

9. What are the three credit bureaus you should contact? Experian, TransUnion, Equifax

10. How long does an extended fraud alert last for? The alert lasts for seven years.

11. What does a credit freeze do? It limits access to your credit report unless you lift or remove it.

12. List out the six steps you should take if you're a victim of fraud and identity theft. 1. Stop ongoing damage to your credit by closing any account that has been compromised. 2. Report ID theft to local law enforcement and request a police report. 3. Report ID theft to the FTC and complete the ID Theft Affidavit. 4. Contact other relevant government and law enforcement agencies. 5. Monitor your credit report on an ongoing basis. 6. If necessary, complete an Application Requesting Declaration that you are a victim of ID theft.

13. How does the ID Theft Affidavit help you resolve identity theft? It provides proof that an account opened in your name is the result of ID theft. The company uses the information in the form to investigate and make a decision about your claim.

14. What are the two parts of completing the ID Theft Affidavit? 1. Complete the ID Theft Affidavit—report general information about yourself and the theft. 2. Complete the Fraudulent Account Statement—this is where you describe fraudulent accounts opened in your name.

coding platform can be utilized online or offline.

b. ScratchJr is a block-based coding platform that enables programming by dragging and dropping blocks.

2. Direct students' attention to the Technology Use Contract they created in the last lesson.

a. Read each of the rules aloud for the class.

b. Have students act out each rule in their seats to check for understanding.

Updated Text: 1. Begin by informing students that portions of this course will utilize an open-source coding platform called ScratchJr.

a. A coding platform is a programming environment that allows users to create projects using various coding languages. A coding platform can be utilized online or offline.

b. ScratchJr is a block-based coding platform that enables programming by dragging and dropping blocks.

2. Explain that the ScratchJr platform can be accessed on multiple devices including a desktop computer, chromebook, smartphone, tablet, and a smartboard.

a. At the teacher's discretion, select at least two different devices to open and show the ScratchJr coding platform.

b. Emphasize that while users can utilize a variety of devices to access ScratchJr and engage with the interface, students will be using their assigned devices throughout this course to create coding projects.

3. Direct students' attention to the Technology Use Contract they created in the last lesson.

a. Read each of the rules aloud for the class.

b. Have students act out each rule in their seats to check for understanding.

Original Text: 1. Challenge students to show how to drag and drop with their bodies.

a. What is an action that could mimic the dragging motion in ScratchJr?

b. What is an action that could mimic the dropping motion in ScratchJr?

i. Suggestions could include dragging their feet on the ground to signify dragging or mimicking dropping an item from their hands for dropping.

Updated Text: 1. Assess students' ability to drag and drop in the ScratchJr platform on multiple devices.

2. Access ScratchJr on a device and display it in front of the class.

3. Ask for student volunteers to select a sprite of their choice. Then, drag and drop the sprite around the Stage.

a. Prompt students in their seats to assist the volunteer by reminding them of the steps to drag and drop a sprite in ScratchJr according to the specific device, if needed.

4. Repeat these steps with at least two different devices and multiple student volunteers.

Original Text: b. Brainstorm solutions

- i. Which Motion Block will program the Crab sprite to reach the surfboard?
  1. What would happen if the hop block was used? Is that the correct block?
  2. What would happen if the move left block was used? Is that the correct block?

Updated Text: b. Brainstorm solutions

- i. Assist students in breaking down the problem into smaller pieces to solve it. Explain to students that they will use sequence terms to break a large problem into smaller chunks.
  1. First, the move up blocks should be removed from the Programming Area since they do not achieve the goal.
  2. Next, other Motion blocks should be attached to the start on green flag block.
  3. Last, students will need to test the program to ensure they have added enough Motion blocks to achieve the goal.
- ii. Which Motion Block will allow the Crab sprite to reach the surfboard?
  1. What would happen if the hop block was used? Is that the correct block?
  2. What would happen if the move left block was used? Is that the correct block?

Original Text: 5. Display the Sunrise to Sunset Images in front of the class. These three photos show the progression of the sun setting, but they are stationary, not animated. Ask students what could be done to turn them into a GIF.

a. Student responses may vary, but guide the conversation toward using a search engine to find a website specializing in making GIFs.

6. Model how to create a GIF for the class. Narrate each step of this process aloud.

Updated Text: 5. Display the Sunrise to Sunset Images in front of the class. These three photos show the progression of the sun setting, but they are stationary, not animated.

6. State that these images were shared in a document. Pose the following scenario to students. You want to create or find your own images for a GIF, what applications could you use to complete this task?

a. Remind students that an application is a program designed for a specific task or interest. An application can be on the computer or another device.

b. Allow students time to brainstorm with a shoulder partner, then record volunteer responses in front of the class.

i. Student responses may vary, but could include the following examples.

1. A photo application, a drawing application, or a web browser application to search for images.

7. Now that students have discussed where to find images for a GIF, ask the class to brainstorm how they might find a website to make a GIF.

a. Student responses may vary, but guide the conversation toward using a web browser application to search for a website that specializes in making GIFs.

8. Model how to create a GIF for the class. Narrate each step of this process aloud.

Original Text: b. What digital animation skills do you already possess?

i. Just like digital animators, students can create their own characters, manipulate movements, and animate those characters on an app platform.

Updated Text: b. What digital animation skills do you already possess?

i. Just like digital animators, students can create their own characters, manipulate movements, and animate those characters on an app platform.

c. What applications were used today?

i. A website browser application was used to access a search engine.

ii. The images were saved on the teacher device and then accessed to input into the GIF maker.

iii. A video application was used to play the video about digital animators.

d. If you were creating a GIF at home, what applications could you use?

i. Students could use a drawing or photo application to create unique images for their GIF. Students could also access images through a web browser or specific search engine application.

ii. To create the GIF, students could access a GIF Maker website using a web browser application or download a GIF maker application onto a device.

Updated Text: c. Display any relevant images and consider how the information provided may or may not help accomplish this goal of the science project. See below for a possible example.

i. "I can use these free images to create my own food chain visual in my project."

d. Ask students to consider other devices that could be used to gather images for the science project.

i. Can you think of another device, other than a computer, that could be used to collect images for explaining the food chain?

1. Answers will vary, but could include using a camera to take a picture and uploading the image to a computer or printing the image using a printer.

2. If applicable, use a camera to demonstrate how this device could be utilized to gather images and include them in the science project.

Updated Text: a. In the exercise, the internet was used as an additional application to look for information. This is called an online search.

i. An online search is the process of using a computer to look for information on the internet.

ii. In the example, the online search was for information about food chains and other refined keywords relevant to food chains.

b. What other devices could be used to perform an online search?

i. A smartphone, tablet, virtual assistant (Alexa or Google Home), etc.

ii. If possible, use one of the devices suggested by students to search for data online.

Original Text: New Content

Updated Text: 1. Begin the wrap-up discussion by asking students how they can act more like a cybersecurity specialist. Encourage students to share their responses with a shoulder partner and then call on volunteers to share with the class. Responses may vary, but should include the following examples.

- a. Logging out of accounts on devices can prevent personal information from being compromised.
  - b. Personal information should not be shared with anyone on the internet.
  - c. Passwords and user account information should only be shared with trusted adults.
2. Explain that like many jobs in computer science, there are multiple paths to becoming a cybersecurity specialist.

Original Text: d. Presentation, flowcharting, and graphics software

i. Because of copyright laws, many graphics must be created by the writer, not copied off the Internet. This requires the use of different graphic and flowcharting tools.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

ii. Technical writers must give credit to the original authors or creators if they do use or reference digital content that they do not own.

Updated Text: d. Presentation, flowcharting, and graphics software

e. Devices could include a laptop, desktop computer, tablet, printer, etc.

13. Invite students to share which of the devices or applications they have used to write or create projects before.

a. Prompt students to open these devices and applications when referencing their examples during the discussion. Help students choose developmentally appropriate tools.

i. Examples could include ScratchJr coding projects, presentations created in presentation applications, student activities created and submitted in the class' LMS or other online learning environment, etc.

14. Share the following statements with students regarding copyright law and graphics.

a. Because of copyright laws, many graphics must be created by the writer, not copied off the Internet. This requires the use of different graphic and flowcharting tools.

i. Technical writers must give credit to the original authors or creators if they do use or reference digital content that they do not own.

Original Text: 1. Challenge students to use application software to create a presentation or write an essay giving examples of when to use each type of application software.

a. Encourage students to reference their copies of the Application Software Purposes graphic organizer.

Updated Text: 1. Prompt students to select an application software, such as a word processor or LMS, to write a paragraph sharing a story of how they use various applications in their everyday lives.

a. Encourage students to then select a device, preferably one they do not use often for more exposure to a variety of devices, to access this application and write their story.

i. Suggest students use a tablet, smartboard, laptop, or desktop computer to access their chosen application to create their content.

2. Once students have written their story, prompt them to create a presentation using a different kind of application software.

a. Encourage students to use another device or application to add audio, video, pictures, or other effects to enhance their presentations.

i. Examples could include using a camera or other device to record and take pictures or videos, using a specific application platform or online learning environment for recording audio and/or video files, searching for images or videos using a search engine on a website browser application, etc.

3. Now that students have created and enhanced their stories using different devices and applications, state that the class will now share their presentations using a learning environment, such as an LMS, or classroom application, such as Google Classroom, that is available to them.

Original Text: 5. Another cybersecurity issue to think about when conducting an internet search is what information you might be sharing. If you search for a playground near your house, could someone use the results to figure out where you live? If you are searching for a video game for kids under 13, does this reveal your age? If you are using a device that could be used by other people, think carefully about what you search for. We could call this Cybersecure Search Guideline #3.

Updated Text: 5. Another cybersecurity issue to think about when conducting an internet search is what information you might be sharing. If you search for a playground near your house, could someone use the results to figure out where you live? If you are searching for a video game for kids under 13, does this reveal your age? If you are using a device that could be used by other people, think carefully about what you search for. We could call this Cybersecure Search Guideline #3.

6. At this point, instruct students to discuss with a partner or small group the three cybersecurity strategies that were just outlined by posing the following questions.

- a. Which of the guidelines that were shared do you already follow when using the internet?
- b. Which guidelines will you implement the next time you perform an online search?

Original Text: 2. Allow a few moments for students to review both documents.

- a. If needed, remind students that they previously completed the Code Exploration handout after viewing the starter file for the Shopping Cart App.
- b. The Design Plans represent their best estimates of what work will be required to add the missing functionality to the starter file to code a completely functional Shopping Cart App.
3. Instruct students to complete their design plans, making sure to write out the steps they will need to take to code their final solutions.

Updated Text: 2. Allow a few moments for students to review both documents.

- a. If needed, remind students that they previously completed the Code Exploration handout after viewing the starter file for the Shopping Cart App.
- b. The Design Plans represent their best estimates of what work will be required to add the missing functionality to the starter file to code a completely functional Shopping Cart App.
3. Reiterate to the class the importance of generating multiple solutions to solve a problem.
  - a. Brainstorming more than one solution to a problem increases the chances of finding the best and most effective solution.
  - b. This way of problem-solving allows for more creativity. Students can push their thinking beyond the first idea.
  - c. Generating more than one solution allows for optimization. After selecting the best ideas, they can then be compared to find the most efficient one.
4. Tell students to imagine they overslept and missed the bus for school. Prompt them to generate multiple solutions to this problem. As a class, discuss multiple solutions, then vote on the best solution.
5. Now, instruct students to complete their design plans, making sure to write out the steps they will need to take to code their final solutions.

Original Text: 9. Now, students are ready to add their crowdsourced data to the simulation. Tell students to input all of the crowdsourced data points from their Airplane Data Points handout. They should press enter after typing each data point.

a. Advise students to work methodically as they enter the data. If they do not enter all of the data points, the program will not allow them to proceed to the flight simulation.

b. Students will only need to enter this information once as it will be stored in the project.

10. Once students have finished entering their data, prompt them to save their remixed projects at this time. Remind students that they will be accessing this project in the next coding lesson.

Updated Text: 9. Now, students are ready to add their crowdsourced data to the simulation. Tell students to input all of the crowdsourced data points from their Airplane Data Points handout. They should press enter after typing each data point.

a. Advise students to work methodically as they enter the data. If they do not enter all of the data points, the program will not allow them to proceed to the flight simulation.

b. Students will only need to enter this information once as it will be stored in the project.

10. After students have entered their data into the digital tool, ask students what type of data they added to the simulation.

a. The numbers they entered are examples of quantitative data, which can be measured or counted and is represented numerically.

b. Ask students for other examples of quantitative data.

i. Examples could include weight in pounds, length in inches, how many points scored in a sports event, distance in miles, the number of days in a year, etc.

11. Once students have finished entering their data, prompt them to save their remixed projects at this time. Remind students that they will be accessing this project in the next coding lesson.

Updated Text: Health-care professionals must understand and use terms that identify the location of body structures in relation to one another. These positioning and directional terms help you accurately summarize and communicate observations and other information to the health-care team in a clear and efficient manner verbally and in your writing.

Original Text: New Content

Updated Text: A healthy child requires healthcare services even before they are born! There are many careers that provide services to those receiving prenatal care that you may want to explore. You could explore the career of an obstetrician-gynecologist (OB-GYN), which as you have previously learned is a doctor who concentrates on reproductive health for women. They help women from pre-conception to post-partum. Another career to explore is that of a family physician. They provide some level of prenatal care—especially in rural areas when there are fewer OB-GYNs available. Many family physicians can also recommend more specific types of prenatal care to their patients (such as an OB-GYN or a midwife.) Certified nurse midwives are not doctors, but they help provide prenatal care with a more holistic approach. They work with low-risk pregnancies and are trained to recognize when a pregnancy or birth needs more specialized care from an OB-GYN. Some prenatal care requires a specialist called a perinatologist. This is an obstetrician who works with patients who need extra support during their pregnancy, such as women over 35 or those who have special medical conditions that could cause a high-risk pregnancy.

Updated Text: Have you ever seen an infant appear to stare at a cell phone or tablet? Is this helpful or harmful for a baby? While many studies remain inconclusive about the impact of technology on the growth and development of children ages birth through 12 months, it is commonly agreed that screen time is usually not a good substitute for face-to-face interactions. If a screen is constantly used to comfort an infant, they might lack some of the social skills development and cognitive growth that interaction with parents and other adults might provide.

Updated Text: When Ruth is born, her parents know that she will need a lot in order to develop healthily. In your own words, what would you tell Ruth's parents about how to analyze the physical, emotional, social, and intellectual needs of children ages birth through 12 months? In other words, what will Ruth need physically, emotionally, socially, and intellectually as a newborn compared to a one-year-old? Also, analyze the impact of technology on the growth and development of children ages birth through 12 months. Based on this analysis, what advice would you offer Ruth's parents?

Updated Text: Some infants and their families might find it helpful to use assistive technologies (AT), which are technologies used by individuals with disabilities to perform tasks that might be difficult or impossible without these devices. When experts analyze the impact of assistive technologies on the growth and development of children ages birth to 12 months, they conclude that AT can help infants with disabilities learn many crucial skills such as communication. Some research has shown that the use of AT devices can help encourage children to increase their communication efforts and skills. When infants use AT as needed, the impact on growth and development can be very positive.

Updated Text:

Build Your Career Plan

Regardless of whether you join FBLA, by now, you likely have an idea about where you see your career going. In order to reach your goals, you should have a plan. Your plan should include those goals as well as distinct objectives (or mini-goals) and the strategies you'll use to accomplish them.

Objectives and goals represent your ambitions. For example, perhaps your goals are to obtain a two- or four-year degree after high school and get a job as a programmer.

A strategy is an approach that you take to achieve a goal. If you have the goal of earning a four-year degree, your strategy might be to enroll at a certain university because it offers the major you want to pursue. You might also evaluate schools based on their tuition costs and post-graduation job placement rates. The best part about a plan is that it is not written in stone—you can change it anytime! If you decide midway through your degree that you no longer want to be a programmer, revisit your plan, work through your new desires and passions, and move forward from there.

The best part about a plan is that it is not written in stone—you can change it anytime! If you decide midway through your degree that you no longer want to be a programmer, revisit your plan, work through your new desires and passions, and move forward from there.

Once you have a plan, you will need to develop a resume or portfolio that is appropriate for it. A resume is a document summarizing your experience, education, and skills. It should be cleanly formatted but also eye-catching to get the attention of job hirers. A portfolio is a showcase of your work. It is visually appealing and should include work samples, projects, or case studies that you were a part of.

Once you have a chosen career plan, you will need to develop a resume or portfolio that is appropriate for it. A resume is a document summarizing your experience, education, and skills. It should be cleanly formatted but also eye-catching to get the attention of potential employers. A portfolio is a showcase of your work. It is visually appealing and should include work samples, projects, or case studies that you were a part of.

Location: Operational Cybersecurity 1b, Unit 6, Lesson 2, Header "Intellectual Property Laws" paragraph

Original Text: New Content

Updated Text: Intellectual Property Laws

Gliders, Inc., needs to be aware of where our customers are physically located as any organization needs to follow the data protection laws of the customer's location. This can apply if the data is only passing through a country, even if the customer and Gliders, Inc. are in separate jurisdictions.

We also need to be able to analyze local cybersecurity laws. Countries have their own cybersecurity laws that can govern such concepts as how a company uses customers' personal data and even against forms of cyberbullying and cyberstalking. For example, a company that operates in European countries must follow the regulations of the GDPR in regard to protecting personal data.

Location: Operational Cybersecurity 1b, Unit 8, Lesson 2, Header "Network Segmentation" paragraph 1-2

Original Text: New Content

Updated Text: Specialized VLAN Topics

...

Demilitarized Zone (DMZ)

In the military, a demilitarized zone (DMZ) is defined as a place where military forces and weapons have been removed.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

The definition of a network DMZ is a little different. In this context, a DMZ is a logical subnet where an organization places servers that need to be publicly accessible and, therefore, are not part of the internal network. For example, an email or web server needs to be publicly accessible for outside users to access those services. However, if either of those servers were compromised, we would have to address the possibility that a threat actor was now inside our internal network.

The way DMZs are configured in different networks varies, but the basic idea is for servers that require public access to be moved from the internal network and placed in a special VLAN/subnet that is outside of the internal network's firewall. Typically, as pictured below, another firewall is set up that is responsible for protecting systems in the DMZ. It also approves any network traffic that needs to flow from the DMZ to the internal network, which adds an additional layer of security.

In a typical DMZ configuration, a second, internal firewall protects systems in the DMZ and monitors network traffic that flows to the internal network.

As a CISO, you need to spend the time it takes to understand how and why traffic flows on your network. There are times when network segmentation is needed, and there are times when you need to make sure devices are on the same VLAN to make traffic flow as efficiently as possible. This is a perfect opportunity to think like your adversary and speculate on the ways that they could exploit your network configuration.

Air Gaps and Sandboxes

Other ways to segment your network is by using an air gap. Air gaps are created when digital assets are separated from unauthorized intrusion in some form. There are several variations of air gaps, including:

- Physical air gap: a device that is disconnected from a network and physically removed from other devices
- Segregated air gap: a device that is disconnected from a network
- Logical air gap: a device that has been protected from access through encryption and access controls

A helpful use of an air gap is to create an air gap backup of data so that if a system is attacked or suffers a failure, there is a way to retrieve that system's data.

The challenge with air gaps is that it is so easy for a device to be reconnected to a network these days that it takes a lot of vigilance to make sure these systems maintain their segmentation from the network.

A sandbox is a virtual environment that is isolated from the network where suspicious code or other threats can be tested or thwarted without harming the entire network. New programs can be tested in a sandbox before installing them across an entire system to make sure there are no unpredictable side effects. When we say that something is "sandboxed," it means that item is limited in where it can travel on the network.

Updated Text: Introduction

Part of your OPSEC plan must include a complete audit of the physical and logical setup of the organization's network. The physical network, which consists of switches, routers, firewalls, access points, wireless controllers, and patch cables, forms the backbone of your organization. This is because the network provides access to your data and connects your organization to its customers. When the network is properly monitored and maintained, it provides a solid foundation that your business can build upon. On the other hand, when ignored and neglected, your network could provide direct

access to unauthorized users or threat actors who could then steal your intellectual property and information on customers and employees.

Part of securing a physical network is setting up physical security controls. A physical security control protects the space where the physical network is housed in its temperature-controlled room. To control who comes and goes, you'll need to consider whether locks, fences, barricades, security doors, mantraps, or a combination of these controls will be most effective. To ensure that only those employees with authorization access the room, what physical controls will work best for your space? There are many lock types, for example. Will you provide employees with a key, issue a security pass, or install a keypad for employees to enter a passcode?

When we open the door to a network closet and see a lot of blinking lights, we hope everything is working properly, but this is a form of blind hope. Seeing the equipment behind a locked door projects a false sense of security. Just because the equipment is physically secured in a building doesn't mean that the equipment isn't vulnerable. In fact, it may be leaking critical data from your organization to the internet.

Securing network equipment in a data closet may seem safe, but your network's physical security doesn't mean critical data can't be leaked.

Updated Text: Cumulative Project: How Would You Design the Company Network?

Required Materials

- Presentation software

Becoming the CISO

In this activity, you will take on the role of a CISO equivalent for a small online retail business. Think of it as a promotion from your previous contractor positions in previous activities! Your company sells computer hardware, making about one hundred sales each day. Other than you, the staff for the company consists of the following people:

- Four IT staff members: one senior member who works directly with you and three lower-level administrators who are responsible for the day-to-day maintenance as well as tasks like writing code for the website.
- Three staff in the sales department: a marketing manager who organizes most of the sales strategies, a copywriter, and a PR professional (who is also one of the company owners)
- The company president, an accountant (who doubles as the HR rep), and four other employees with relatively little IT training

Your immediate task is to create a slideshow presentation that will cover major targets discussed in the unit.

Step 1: The Presentation

Create a slideshow that is suitable to present to the company president and other IT staff. They are your target audience.

The presentation should cover the design of the company's network by focusing on four major components:

- DHCP and switch hardware
- DNS
- Routers
- Firewalls (including an incoming and outgoing network policy)
- DMZ (including a simple logical diagram that provides a topological overview of services)

Your discussion of each component should include the following information:

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

- An explanation of the component
- Identification of the threats to the component (based on your business)
- At least ONE major target-hardening mechanism

Think of it as an exercise in providing basic instruction while also arguing the merits of maintaining or increasing budget spending on security.

Step 2: What to Submit

Your submission for this activity will be a slideshow-style presentation that explains the four major network components as they apply to your business, including threats and hardening mechanisms for each component.

Asset Inventory

As the risk assessment comes together, you, the CISO, are the person who bridges the gap between very technical aspects of the assessment performed by the network team or a third-party company and the management team tasked with weighing costs, creating budgets, and setting the company strategy. For instance, your budget may allow you to contract with a managed service provider (MSP), which will test your network to confirm it's operational; alternatively, you may decide you require the services of a managed security service provider (MSSP), which provides security as a service and will ensure that your network is safe, secure, and compliant.

Updated Text: Control Types and Risk Policies

Controls

A risk assessment is all about measuring the effectiveness of the controls that an organization has in place to keep its identified assets safe. We can divide the CISO's efforts discussed throughout this unit into three control areas: technical, management, and operational.

Technical controls

Management controls

Operational controls

Our attention now shifts to the human element of the risk assessment. The humans we're considering here include general users, administrators, executives, customers, third-party contractors, and business partners. Anyone who may interact with our network will likely find themselves subject to policy that was inspired by one of the three control types

# Proclamation 2024: Report of New Content

discussed above. But what if you don't have the personnel to execute these tasks? That's where a managed security service provider (MSSP) could provide value. An MSSP could evaluate how strong the controls are that you have in place and suggest ways to tighten them.

Updated Text: Linux

In a Linux system, files are organized in a tree structure which begins at the root directory. The root directory is the start of the file system, and it branches out to different subdirectories. The root is indicated with a forward slash (/). Instead of saving program files on the C: drive, as in the case of Windows, system and program files are found in different directories. In Linux, everything is a file. Directories are files, files are files, and even devices are files! In Windows, hard drives, printers, and keyboards are devices.

Manipulating and editing files can be done from the command line interface (CLI) in Linux. Commands such as "cp", "mv", and "rm" can copy, move, and remove files, respectively. Editing files can be done by opening them in the CLI with text editor tools like GNU nano and vi.

If you choose Linux, you will find that it provides greater freedom and control, but for most people it's more complicated to use than Windows and Mac.

Updated Text: Risk Response Techniques

Once an organization has identified risks, it can determine how it wants to respond to them. Four general strategies include accepting, transferring, avoiding, or mitigating risk.

With risk acceptance, the organization decides not to do any mitigation to counter the risk. For example, a data center may be located in a hurricane-prone area, but the company decides to host their servers there regardless.

With risk transfer, the organization transfers responsibility of a risk to a third party. For example, they may purchase fire insurance that will cover the costs associated with the risk occurring, or they may use outsourcing so that the outsourcing company is responsible for any risk.

With risk avoidance, the organization gets rid of the risky activity completely. For example, a company may decide not to accept personal checks as payment to avoid receiving bad checks from customers.

With risk mitigation, the organization does whatever they can to minimize the risk from materializing. For example, a company may use firewalls and intrusion protection systems to mitigate the risks of cyberattacks.

Updated Text: UNIT 5 ACTIVITY 1

Run That Play

Required Materials

- Word processing software

Note: We recommend that you complete Activity 1 before starting Activity 2.

Security Consultation

Of course, it's smart for a company to have a solid playbook in place BEFORE a cyberattack occurs, but not all companies have the internal know-how to create an effective playbook, even if they have competent IT staff.

This is where you come in because, in this activity, you are a security consultant! The activity involves a small, web-based retailer that needs your expertise to help develop its playbook, so the retailer is really happy that you agreed to take on this project.

In practice, a true playbook or runbook would require more intimate knowledge of the company, so the task for this activity is to think through the steps of creating a playbook. Your playbook should also provide a strong foundation on which the company will be able to build in the future after your work is done.

What You Know

The company (for BOTH activities in this unit) is an online retailer that completes approximately 100 sales each day. Here is some additional information to keep in mind about the company:

- There is no official CTO; instead, five staff members handle the major IT duties. This group consists of two senior staff and three lower-level administrators.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

- The company currently stores its data on portable hard drives that are kept in the (locked) office of one of the IT staff members.
- Besides the IT staff, the company has three staff in the sales department: a marketing manager who organizes most of the sales strategies, a copywriter, and a PR professional (who is also one of the company owners).
- There are also a company president, an accountant (who doubles as the HR rep), and four other employees with relatively little IT training.

## Step 1: A Good Start

Creating a full playbook and runbook requires a lot of time and specific knowledge about the company; however, you can make a good start by answering the following questions:

Who?

Who are the members of the response team? Here are some additional questions that should be addressed concerning the team:

- Who will manage the high-level organization of the team and its responsibilities?
- Who, beyond the IT department, will need to be involved in the efforts?
- Who will handle the media/PR side of things, and what should their general strategy be?

How?

How should the team respond to a critical incident?

- What will you incorporate as part of a reactive solution (that recognizes and responds to an attack as it occurs)?
- What should be the team's response if the solution implemented triggers an alarm?
- How will the team communicate during a security event, especially if the attack affects the typical communication channels used?
- How will the team triage? That is, what steps will be taken to identify (quickly!) which systems have been affected?
- What are the steps in your containment plan? (This will resemble steps in a typical playbook/runbook.)

What?

For example, consider what the team needs to think about to prepare the company to get back up and running after a critical incident.

- For this sort of business, what is an acceptable RTO?
- What common vulnerability disclosure websites will you consult (because they stay current with your system architecture)? Discuss your reasoning.
- What would you recommend as the RPO (for both full backups and incremental and/or differential backups)?
- What is your restoration plan? (Again, this will more closely resemble a typical playbook/runbook list.)

Updated Text: Employability Skills Some CS and IT-related job duties are technical or very specific, such as coding in a specific programming language or being proficient at a type of software, delivering a product, creating reports, or even managing a team of developers. Other duties may include designing software applications, maintaining and updating software systems, documenting code or project specifications, training users on new technology, or even responding to IT-related help-desk tickets. While having the right technical skills might be enough to land you a job, you'll need additional skills to be a good employee. It might not seem like it, but some of the most important skills in computer science and IT fields revolve around soft skills such as communication, work ethic, motivation, time management, and flexibility. As you start identifying job and internship opportunities, along with their accompanying job duties and associated tasks, you'll start to notice a trend of not just technical skills being listed but skills related to working on teams as well. Job duties such as developing an application might require good management and communication, while a task like creating a large report within a specific timeframe might require excellent time management. Attention to detail, teamwork, creativity, time management, and especially communication are all extremely important for anyone working in a technical field. The art of communication is especially crucial to becoming a successful employee, whatever career you choose. But especially in the computer science and IT world, you need to know how to communicate technical language in a way that is suitable for the audience.

Link to Updated Content:

[View Updated Content](#)

Original Text: New Content

Updated Text: Step 2: Add a Canvas Most apps will begin with putting a Canvas component onto the screen, so go to the Drawing and Animation drawer and drag over a Canvas. Notice how the canvas only takes up a small portion of the screen. Let's change that by going to the Properties section and changing the Height and Width settings to Fill Parent. The Height and Width properties are known as variables. They're called variables because they can be changed either manually or through code. There are many types of variables in game design used to store all sorts of data. Some variables store numbers, such as a player's health or, in this case, the height of an object. Other variables store data and references such as images, lists, objects, words, lines of text, and more. We can even use variables in animated sequences when we store how far an object should move or how fast. Step 3: Add a Sprite Now that the canvas takes up the entire screen, let's add a sprite (a graphic that can be manipulated). Download the bird image below using right-click (or control click) and Save image as... Be sure to use the filename Bird and filetype PNG (Bird.png). From the Drawing and Animation drawer, drag over ImageSprite. In Properties, find the Picture property and select this file for upload to your app. You may want to adjust the size by changing the height and width variables. (Ours is 50 x 50 pixels.) Step 4: Add an Event Handler Now that we're done with the Designer elements, let's head over to the Blocks editor, where we will add the programming elements to our app. In Blocks mode, you'll see the Blocks section on the left where the programming elements are located. You'll drag and drop them onto the white Viewer screen. Let's begin by clicking on ImageSprite1 in

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

the Blocks section. This will bring up a menu with blocks that apply to that component. Drag over the when ImageSprite1.flung block. This block is known as an event handler because it watches for an event (in our case, the user flinging the bird) and performs an action (in our case, moving the bird across the screen). Let's change the sprite's speed and heading variables (direction) by scrolling down in the ImageSprite1 block menu and dragging over set ImageSprite1.Heading to and set ImageSprite1.Speed to. Plug both of the blocks into the do section of the event handler. Now our variables will directly affect the image's direction and speed. We want the sprite's speed to be the same as the user's fling speed. So, click (or hover) on the pink speed in the Flung block and drag get speed down to the set speed block. Do the same for heading.

Updated Text: Educating Patients about Vaccinations

Vaccinations have become a hot topic in the last decade or so. Rumors and data from inaccurately conducted studies have caused some to be suspicious of vaccines. That is why it is so important for healthcare professionals, including medical assistants, to clearly provide patient education on the value of vaccinations and staying on schedule. How best to do this?

Discuss with patients the disease that the vaccination is trying to protect against. Explain the consequences of not being vaccinated. Describe how the vaccine will work to protect them or their children. Then, go over the vaccine information statement together so that patients understand both the benefits and risks. Invite patients to address any concerns they have.

Once the patient understands the importance and purpose of the vaccination, show them the immunization schedule laid

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

out by the Centers for Disease Control and Prevention (CDC) (as seen above). Make a plan together to address any vaccines that are behind schedule and to keep the schedule on track in the future.

Misinformation can only be counteracted when patients receive clear, understandable information on how vaccines really work. As a medical assistant, it is your responsibility to educate your patients on this subject, thus protecting them from avoidable diseases.

## **Component: *Medical Assistant 1a/1b***

ISBN: 9781959433378

Location: Medical Assistant 1B, Unit 3, Class Slides, Slide 11: Show Some Class: Drug Classes

Original Text: New Content

Updated Text: Drug Schedules

Schedule I drugs are those that have little to no medical use and are highly addictive with a high potential for abuse. Examples include heroin, marijuana, lysergic acid diethylamide (LSD), peyote, and 3, 4-methylenedioxymethamphetamine (ecstasy).

Schedule II drugs include some that have some medical use, but all are highly addictive with a high potential for abuse. Some indications of use (or ways they are used) can be for moderate to acute pain. Many times, this means they are used for patients having surgical procedures, but because of their high potential for abuse and effect on the body, they are only used if other medicines are ineffective or cannot be used. Examples include cocaine, hydromorphone, oxycodone, fentanyl, methamphetamine, and methadone. Schedule III drugs also have some medical use and have some potential for abuse and addiction, but it's lower than those of Schedule I or II. This classification separates abuse potential into a high psychological dependence and a low to moderate physical dependence. Schedule III drugs are sometimes indicated for minor surgeries or diagnostic procedures. They can be used to numb mild or moderate pain, as well as relax muscle contraction. Examples include anabolic steroids, ketamine, and medications with less than 90 mg of codeine in a single dose.

Schedule IV drugs have medical uses and a low risk of addiction or abuse. Indications for Schedule IV generally involve management of seizures, extreme anxiety, insomnia, and musculoskeletal pain. This classification includes clonazepam, alprazolam, diazepam, carisoprodol, and triazolam.

Schedule V drugs have medical uses and the lowest potential for abuse or addiction. Schedule V drugs are used to calm bradycardia, nerve pain, and very mild pain. Examples include atropine, pregabalin, and those with low amounts of pseudoephedrine or codeine.

Medications that don't contain controlled substances aren't categorized under these schedules. Anyone who prescribes, handles, stores, or distributes drugs in Schedules I-V must be registered with the DEA.

Original Text: New Content

Updated Text: Cumulative Project: How Do You Take a Blood Sample?

Required Materials

- Word processing software

Taking a blood sample requires several precise steps that protect both you and the patient. To help remember these

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

steps, you will create a checklist of what needs to be done. You will also create a label for a lab specimen so you can remember all the proper documentation that needs to take place each time you collect a specimen.

## Step 1: Create a Checklist

Create a checklist of the steps of taking a blood sample.

Be sure to start with PPE. Apply your knowledge of PPE used in various situations such as venipuncture and other types of specimen collection to describe what you would need to do when taking a blood sample. What steps will you add to your checklist to make sure you are using PPE accurately?

Continue on with the other steps you would take in this process of collecting a blood sample.

## Step 2: Create a Sample Label

Design a sample label that you can use as a model for future specimens. Demonstrate proper labeling of lab specimens, including patient name, date of birth, source, date, time, and initials of collector.

## Step 3: Leave Some Instructions

Finally, create a note for your coworkers with instructions on how they should properly transfer and store these lab specimens. Make sure to be clear in your instructions, as a sample that has not been properly transferred or stored will not yield accurate results.

Submit your checklist and your sample label to your instructor.

Original Text: New Content

Updated Text: 5. Sasha is a medical assistant who performs point of care testing. What types of testing might she perform? Identify and correlate specimen types and collection methods, including throat swabs, capillary blood, and urine used in point of care testing. Next, identify how to properly transfer and store the lab specimens.

Answers will vary but should include tests Sasha might perform, specimen types and collection methods:

- o Possible tests: urinalysis, C-reactive protein (CRP), mononucleosis, strep, flu, COVID-19, H. Pylori, TB, etc.
- o Throat swabs: (Example) to detect bacterial, viral, or fungal pathogens. Method: Have the patient tilt their head back, open their mouth wide, and say “ahh.” Using a tongue depressor, gently push down on the tongue, while rubbing the swab on the posterior pharyngeal wall, tonsils, or tonsillar pillars without touching the tongue, teeth, or gums. When swabbing the throat, swabs of the mouth in other areas may cause false-negative results. The swab should be placed into the sample tube, sealed, and labeled with the appropriate information.
- o Capillary blood: (Example) Capillary screening (taken from the heel) is used to screen all newborn babies in the US for many conditions including metabolism disorders, fatty acid oxidation disorders, endocrine disorders, and hemoglobin disorders. Method: wipe the site with alcohol, let it air dry, puncture the finger, heel, or ear with a lancet, and wipe away the first drop of blood. Squeeze the site to fill the sample tube
- o Urine: (Example) Tests for blood, sugar, UTI, diabetes, etc. Methods: random, midstream, timed, first morning, catheter, etc.
- o Proper transport:
  1. Use specially labeled tubes for blood collection, always keep gloves on, and make sure tops are fastened tightly.
  2. When urine samples will be used for drug screening, place the seal on the cup, have both collector and patient witness the seal, and document every person and movement until the test is completed.
  3. The biggest things with transport are using the correct container and keeping track of the chain of custody.
- o Proper storage:

Proclamation 2024: Report of New Content (08/25/2023)

Updated Text: HIPAA

In 1996, the Health Insurance Portability and Accountability Act addressed the need for privacy when dealing with a person's health information, referred to as protected health information or PHI, especially in electronic form. Over time, additions to the act increased security and specified how and when information could be released. Healthcare providers need to be aware of these rules to properly maintain medical records, prepare them for release (if authorized), store them, and, when the time is right, dispose of them.

Because it is important to make sure this sensitive information does not fall into the wrong hands, every medical office will have a shredding bin. A shredding bin is a locked container that serves as temporary storage for confidential documents that need to be disposed of. Only the person who will actually feed the documents into a shredder has the keys to the shredding bin. This ensures that no one, even other healthcare professionals, catch a glimpse of confidential information.

Updated Text: Lesson Plan Class No: 4, Instructional Time, Direct Instruction, Taking Out the Trash Activity

- Slide 41: Disaster Preparedness.
- o Instruct students that all healthcare facilities are required to have an emergency management plan. This plan includes what to do in case of an explosion, massive influx of patients, weapon or active shooter, biohazardous threat, or terrorist attack.
- o Share with students that preparation is key to minimizing injuries and casualties in the event of a disaster.
- Taking Out the Trash Activity
- o Remind students of the various ways that waste is disposed of in a medical lab. Have them create a poster that categorizes the different types of waste disposal. On their poster they should define: trash receptacle, biohazard bag, and sharps container. Then they would give one example of items that would be disposed of in each.

Updated Text: General Lab Safety

Before using a laboratory, workers should be aware of some general safety guidelines. These tips include knowing the location of eyewash and shower stations in case of accidental exposure, wearing the proper attire and keeping hair pulled back, not eating or drinking in the lab, keeping the work area clean, wearing the proper PPE, using proper handwashing techniques, and properly disposing of any waste. A trash receptacle, or container for general waste, should be available in every room in the lab. Not everything is disposed of in a trash receptacle, as we will now consider.

Location: Medical Terminology 1A, Unit 1, Lesson Plan Class 1 (bottom of page 1, top of page 2) Introduction: "Slide 7-Are You Speaking My Language?" All bullet points

Original Text: New Content

Updated Text: As you learn and start to love medical terminology, you will be able to use the language as you would a second language. In other words, you will be able to do things like talk to patients and other medical team members using terms that once seemed foreign. With coworkers, you can speak to them using the proper terms, giving you the ability to cooperate (use terms to get along well with other members of the team), collaborate (use terms to come to the best solution), and contribute (use terms to give suggestions) as a member of the healthcare team. With patients, a big part of the patient's trust comes from the way that you speak to them. When you use medical terminology correctly, you show that you know about the field. Also, when a patient doesn't understand a medical term, you can translate, just like you would a foreign language. Think how rewarding it will be to be able to help someone understand the very same language that was once unknown to you!

Original Text: New Content

Updated Text: Instructional Time: Group Work

Discuss the importance of cooperating, collaborating, and contributing as a member of a team. Divide students into groups representative of a medical team, giving each group a disease or condition. Have students work together to research the disease/condition and develop a description using medical terms. Have them break the medical terms into the word parts, with a definition for each part. After completing the assignment, have them describe how they cooperated, collaborated, and contributed as part of a team and how these qualities can help them work well as a member of the healthcare team.

Original Text: New Content

Updated Text: Many words used in the medical field are a combination of various word parts. Each term can be divided based on these parts. Using these parts helps us accurately spell and precisely describe things in the medical world. The major parts used to form words are:

- prefix
- root or combining word
- suffix
- combining vowel

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Let's break down how these word parts are used in the medical world.

Prefixes are a word piece placed at the beginning of a word to add information to it. The additional information indicates things like a direction, a number, a location, or a size. One common prefix that you may already know is hyper-. This prefix means over or excessive, so in the case of the term hyperactive, the word means overly active.

The root or combining word is the basis for the word and gives the beginning meaning for that word. So the combining word is the foundation or basis for the rest of the word. Using the prefix hyper- that we just learned, and the combining word glyc(o)-, meaning sugar, we can define hyperglycemia. By merging the two definitions, we find the meaning is excessive amount of sugar. Notice when you write the combining word you include the vowel, even though sometimes, like in this case, it's dropped before being used in the word. Suffixes are word pieces placed at the end of a word and further explain or define a word. The suffix may specify a disease, a body location, or even a procedure. Every medical term has a suffix added to a prefix, or a root or combining word, or both a prefix and a combining word. Using the example above, we learn even more information about the term hyperglycemia. The suffix -emia means pertaining to the presence of a substance in the blood. We now add that information to our definition and find out that the full meaning is a condition with the presence of an excessive amount of sugar in the blood.

The combining vowel is an additional vowel added to a root or combining word and is simply a way to connect a suffix to a root word or a root word to another root word. When combining a suffix to a root word, if the suffix begins with a vowel, no additional combining vowel is needed. For example, with the suffix -algia, meaning pain, no additional vowel is needed to join to a root word. So, if we join the root word my(o)-, meaning muscle, with -algia, we form myalgia. The new word means muscle pain. On the other hand, when combining a suffix that begins with a consonant to a root word, we need to add the combining vowel. An example of this type of combination would be if we take the root word carcin(o)-, meaning cancer, and join it with the suffix -genic, meaning causing. We make the word carcinogenic, meaning cancer causing or a cause of cancer. As you can see, we kept the o on the root word to form the final word. This vowel makes the word easier to pronounce and easier to read. Sometimes, two root words combine to make a word. In general, with these combinations, the vowel is also kept. This type of combination occurs when we join gastr(o)-, meaning stomach, with enter(o)-, meaning intestines, and -ology, meaning science of. Our final word is gastroenterology which means the science or study of the stomach and intestines.

As you can see, by learning the meaning of the word parts you can form and accurately spell many medical terms. By following the steps based on whether you are building a word or breaking it into its parts, you will be able to understand and use many medical terms.

Try to form (and correctly spell) a word from arthr(o)-, meaning joint, and -itis, meaning inflammation.

Updated Text: Helpful Hint

When learning anything new, it helps to relate it to something you already know. Think about things you've learned in other classes or experiences you've had along the way. Have you ever been to the doctor or been with someone else when they were treated by a medical professional? What have you learned about the body in previous science or health classes? Use prior knowledge and experiences to help you understand the meaning of terms used in the health science world.

Updated Text: How Are All of the Pieces Put Together?

We now know how all of the building blocks (cells, tissues, organs, and systems) are put together, but how do we talk about the body as a whole? We'll use a standard body position to relate to everything else we may discuss. This position is called anatomic position. Imagine a person standing with their arms at their sides, palms up toward the front of the body, legs and feet forward, looking straight ahead. Now we can identify various directions, body planes, and body regions.

How Do You Interpret Medical Notes?

Required Materials

Proclamation 2024: Report of New Content (08/25/2023)

Page 1770 of 1830

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

- Word processing software
- Video recording device

Imagine you have been given a nurse's notes about a patient. In this activity, you will use your knowledge of medical terminology to read and interpret these notes.

Step 1: Read the Nurse's Notes

Current Complaint: A 67-year-old male, Jackson, arrived at the doctor's office complaining of SOB, tachypnea, and some hemoptysis. His symptoms have been going on for one week.

History: Patient has COPD and frequent URI. Most recent TB test was negative.

Symptoms: Temperature is 102°, R are 25 per minute, BP is 145/90, heart rate is 75 beats per minute. Patient has a persistent cough during examination. O2 levels obtained with an oximeter show 92%.

Tests Ordered: ABGs, CXR, PFT, CT

Diagnosis: After tests were performed, ABGs show low O2 level and increased CO2 level. CXR shows atelectasis in the LUL. PFT confirms COPD. CT demonstrates possible pulmonary embolism.

Treatment Plan: Recommend pulmonary angiography to rule out pulmonary embolism. Continue treatment for COPD, specifically emphysema. Refer patient to ENT for further evaluation.

Step 2: Interpret the Notes

Describe observations the nurse made using medical terminology, for example, the patient's appearance (sweating, bluish skin, etc.). Translate the nurse's notes into layperson's terms to explain to a family member. Write your translation in the same form as the original notes but identify abbreviations by the name and define medical terms.

Step 3: Make a Video

Make a video of yourself relaying the information to the patient's family in layperson's terms. The video should also clearly display professionalism, by speaking in a clear and respectful manner.

Submit your written description and your video.

Updated Text: How Do I Test My Hypothesis?

Required Materials

- Scientific notebook
- Various household items
- Word processing software (optional)

Remember this illustration?

It's time to put all your planning to use and test your hypothesis! In this activity, you will:

1. Collect qualitative and quantitative data.
2. Analyze qualitative and quantitative data using the parameters established in Unit 4 and Step 1, of Activity 1.
3. Determine the need for future testing.

Proclamation 2024: Report of New Content (08/25/2023)

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

## Step 1: Perform Your Investigation

By this stage, you've made initial observations, developed a hypothesis, and designed a study to investigate your hypothesis. Before you begin:

1. Review your safety notes (scenario description, relevant safety precautions and how you will implement them, your comparison of safety in the lab vs. field work)
2. Review the data you planned to collect in your investigation.
3. Gather any supplies, tools, and equipment needed to perform your investigation.
4. Initiate the schedule you will use to collect data.
5. Record in your scientific notebook the time, place, duration, and current conditions.
6. Begin your investigation!

## Step 2: Collect Your Data

Now that you are ready, collect your data. This will include quantitative data and qualitative data.

Remember, quantitative data has to do with numerical values. When you collect your data, record it in both SI and United States customary measuring units. For example, if you were investigating the length of a hair sample, you would collect measurements both in inches and in centimeters.

On the other hand, qualitative data has to do with the observations you make. What is the color of the sample? Describe its attributes.

## Step 3: Analyze Your Data

Depending on the size and scope of your research, you may be able to analyze your data after conducting your study. If your investigative question is more complex, you may need to collect data across multiple observations before moving to the analysis phase. Be sure to record all observations in your scientific notebook.

Once you've collected enough data, analyze it. Consider the following, and record in scientific notebook.

1. What type of data did you collect?
2. What statistical concepts are relevant to your analysis? For example, is the size of your sample relevant?
3. Can you identify any patterns?
4. Can you identify any sources of error?
5. Have you identified any limitations to the design of your investigation?
6. Finally, does your data support your hypothesis?
  - o If the answer is yes, congratulations!
  - o If the answer is no, do you retest, or design a new study?

## Step 4: Determine How to Display Data

After you've considered the answers to these questions, give some thought to the best ways to depict or display the data you have gathered. In your scientific notebook, write responses to these questions:

1. What is the best way to display your data?
2. Will you use figures, tables, graphs, graphic organizers, or other visual displays?
3. Which type of display is the most appropriate for showing the relationship between the data and the hypothesis?
4. What aspects of the data will be potentially easy or difficult to explain?
5. How can you best present this information to a general audience?

You'll be using this to create a presentation in the next unit, but it's best to record information when it's fresh! Now you can return to your findings anytime for further analysis.

Updated Text: The Graphic Organizer

Creating your materials may be made easier by using a graphic organizer, sometimes called a concept map. Graphic organizers are visual tools that help organize ideas. They take many forms, but may include:

- Using a central idea and connecting other data or talking points to this idea
- Constructing a flow or an order of how ideas are best presented
- Determining the similarities and differences of multiple ideas

Important information provided in an impactful manner facilitates understanding and aligns talking points so all participants can be on the same level.

It is easier to help others make a connection with a topic once you firmly understand the topic yourself. For example, you may want to talk about how diabetics may have symptoms like pain or numbness, which can get worse over time. You might also want to explain the importance of blood glucose levels and how normal fasting levels are 60 – 100mg/dL.

Organizing your thoughts and finding the right approach to present the data will allow you to better explain it to others.

Updated Text: Peer-Reviewed Medical Journals

You already are familiar with scientific journals. There are variants of these publications called peer-reviewed medical journals. For an article to be published in one of these journals, it must first go through a review process. This process includes:

1. Experts in the field review the submission.
2. The experts give their recommendations as to its suitability for publication.
3. The journal's editors make their decision if the submission will be published.

This is a slightly different process than non-peer-reviewed journals, where the editors may not consult with experts in the field. If the experts do not believe the article is appropriate for publication, they also are to provide constructive feedback to the author. Such feedback may include commentary on both the quantitative and qualitative data.

The rigors of peer review ensure the information provided is supported, reliable, and replicable but is not generally a quick process, as scientists intricately pick through the data.

Make the Connection!

Think about the hypothesis you are developing. After seeing what is involved in putting together a study, how would you design a study on your chosen topic?

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

If Dr. Lim's submission was rejected from publishing, it could be for several reasons. For example, if the size of the subject groups were not large enough, then her quantitative data may be skewed. If the study also included tracking of qualitative data, such as patient symptoms, this would need to be documented in a method approved by the experts in the field.

Having information to share with others is exciting. Then you need to figure out the best way to communicate it. Science is driven by data. The magic happens when you can combine the data with the story about it, like Henry and his lab results.

## **Component: Pathophysiology 1a/1b**

ISBN: 9781959433521

Link to Current Content:

[View Current Content](#)

Location: Pathophysiology 1a, Unit 5, Lesson 1

Original Text: New Content

Updated Text: Documentation

You follow Dr. Lim out into the hallway and to the nurse's station. Here she uses a computer program called an electronic health record (EHR). An EHR is a program that documents all the medical information about a patient. In addition, to the information about Henry's chief complaint, she is also about to enter the findings from the physical examination.

The EHR compiles medical data for each patient that follows them through the healthcare system for life, a live document that is constantly built upon and refined to provide up-to-date information to providers. Photo by Oguntoye Patients EMR, public domain.

Whenever you are entering and summarizing quantitative and qualitative data and information into a patient's medical chart, it is important to remember that someone else may be reading it. While it might be tempting to use your own type of shorthand and abbreviations, it is best practice to instead use the Six Cs of Charting.

Clarity

Moving your thoughts from your brain into someone else's brain takes a lot of practice. The ability to do this effectively determines your ability as a communicator. When entering or writing down medical information, it is best to use proper healthcare terminology whenever possible. For example, Dr. Lim is writing "bilateral plantar surfaces" instead of saying the "bottom of both feet." The bottom of the foot is not precise enough and may be misunderstood; while the "plantar surface" is the healthcare terminology that specifies the part of the foot that faces the ground.

Concise

Good documentation should use appropriate abbreviations and be free of excess words. Dr. Lim demonstrates this by writing "CC: bilateral plantar surface 2/10 pain of 3-month onset and paranesthesia of 1 week onset." Compared to how Henry described it, this sentence contains the same amount of information, but it is much shorter.

Chronological

Are you wearing a chronometer, aka a watch? Chrono means time and listing events chronologically means listing them in the order they happened in time. Since the pain has been going on longer, it is mentioned first in the document. This is followed by the paranesthesia or numbness, which has only been around for a week.

Complete

All patient information is included in the note. For example, the document would include that Henry has 2/10 pain and numbness but would also include responses to questions about symptoms he doesn't have. During the exam, Henry told Dr. Lim that he had not been in any accidents or experienced any trauma to the feet. Dr. Lim includes the line, "patient

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

denies any history of trauma or accidents to the area of CC." In short, completeness includes both what is there and what is not there.

## Client's Words

Sometimes the patient describes their experiences in a unique way. These descriptions are sometimes very descriptive and are included in the document. Henry said that it felt like he was "wearing thick socks all of the time." Describing this sensation using healthcare terminology might not convey the same meaning so succinctly; Dr. Lim puts this statement in quotes to tell the reader that this was said by the patient verbatim.

## Correct

In the hunt to understand phenomena, accurate information is essential. Since care is contingent on the medical data, the patient's medical document needs to be correct. Whether the documentation system is paper or computer-based, any errors in the medical record must be corrected. Lastly, information that is suspected but not confirmed needs to be designated as such. For example, Dr. Lim assigned a differential diagnosis not a diagnosis because she did not have enough to confirm her hypothesis yet.

Keeping documents orderly and accurate allows for members of the interdisciplinary healthcare team to collaborate on a patient's case with the goal of the patient's recovery. In this case, Dr. Lim's documentation on Henry will potentially be seen by the medical lab personnel and perhaps another physician. The medical lab will be adding their lab reports to Henry's medical document, which will then help Dr. Lim confirm a diagnosis. Just like cells working together, healthcare workers' ability to work together helps maintain a person's health! It all starts with proper communication.

Dr. Lim found out that Henry has had his blood drawn and the samples are being sent to the lab. While she would like the results as soon as possible, she is also considerate of the other physicians who require lab testing for their patients. It is better for the healthcare team at Dynamics Medical to only request labs are done STAT, or immediately, when they are emergencies. This might be a good chance to head up to the medical lab to observe the testing. Better get moving!

## Remember That Growth Chart?

Do you remember visiting your pediatrician when you were younger and they'd chart your height and weight? Perhaps they showed you a line plot to indicate how much you grew since the previous year and how you measure up to others your age?

Often, healthcare professionals will take the quantitative data collected for a patient and display the information in a chart to summarize data for patients – this is a quick and easy way to summarize information for patients.

Updated Text: High-density Animal Farms

If one consumes meat or poultry in the United States, it most likely comes from a concentrated animal feeding operation (CAFO), or factory farm. Around 70 percent of cows and over 98 percent of pigs, eggs, turkeys, and chickens are grown on CAFOs. These animals live in extremely high-density areas having little room to move around. Sometimes animals are kept stationary in cages their entire lives. Having such high amounts of animals living in these CAFOs carries environmental and health risks, including zoonotic diseases, which are those that can move from animals to humans.

High-density animal farms create a unique opportunity for pathogens to manifest and mutate, creating new opportunities for disease transference.

Proclamation 2024: Report of New Content (08/25/2023)

Page 1775 of 1830

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Explore the accordion below to see how CAFOs can disrupt human health:

----EXISTING ACCORDION----

How Do We Know?

Zoonotic diseases may not be new, but humans understand of it is fairly new. It wasn't until 1973 that Dr. Jean-Jacques Muyembe was able to make a connection between a deadly new blood disease killing residents of Central Congo to an African fruit bat. The disease, Ebola, is transmitted by a virus that is comparatively large and snake like in shape. Although fruit bats can continue to live even as they host the virus, in humans it is fatal 81% of the time, with death coming quickly and brutally. Muyembe has continued to research the virus, especially after another outbreak in 1995, he hypothesized that treatment might be derived from the blood of those 19% who did survive an Ebola infection. Dr. Muyembe extracted antibodies from this blood and used it to treat new patients. The treatment worked in 7 out of 8 cases! This treatment is actually a forerunner to the antibody medication that is used today to treat COVID-19.

Ebola was just the first and as we've learned, zoonotic diseases have appeared in other places, especially among food supplies, like chicken farms. In the early 2000s, avian flu began to spread worldwide and contaminate poultry sold in markets. The avian flu led to sickness among thousands and farmers slaughtered millions of fowl in an effort to stamp out the spread. Of course, this cost farmers millions in potential profit. This huge outbreak caught the attention of a scientist named Dennis Carroll, an infectious disease specialist who worked at the U.S. Agency for International Development (USAID). Carroll felt that even though efforts to contain the spread of this zoonotic disease were good, they could be better. He believed that one important resource in the fight was untapped: veterinarians. Carroll teamed up with animal health experts to educate farmers on how to reduce exposures and risks as they tended to their flocks. If farmers could limit the exposure or carefully monitor the conditions and health of their chickens, the time spent would pay off in the end because they would be healthier and pose less risk to the public.

Carroll believed that stopping the spread of zoonotic diseases at the source was the key. He formed a coalition called Predict, which has worked in the years since to collect samples from more than 164,000 animals and people. Over the course of 10 years, Predict researchers were able to identify 919 new viruses, including a previously unknown coronavirus that they found in bats. Predict's research and discoveries were the starting point that scientists used when the outbreak of COVID-19 hit. Their discoveries allowed scientists to more quickly identify the new virus and track down where it might have spread from. This contributed to the quick development of vaccinations that would allow worldwide society to get back up and running in less than two years' time.

Understanding the source and spread of infectious diseases is essential for preventing and controlling them. Ensuring the safety and health of the public involves recognition of the problems and initiation of interventions. In this next section, we will explore these efforts.

Capturing, displaying, and organizing data reveal hidden categorizations and patterns that come alive with the power of computer processing.

Computers can provide assistance in a few ways here:

- Calculators – simple computers that assist with mathematical calculations
- Spreadsheet software – allow for organization and calculation of data
- Analytic software – programable software for automated complex calculations
- Computer modeling – data-guided simulated environments to predict outcomes

Computers are tools that support scientists in handling the information overload that sometimes results from a large scientific study.

Make the Connection!

Computers are great tools that can help handle a lot of the intellectual work that is part of science. However, it is also important for you as a scientist to monitor your own emotional state. As you know, science needs to remain objective for it to be valid. Unbalanced emotion can lead to biased judgments. Also, good science often takes a long time. A good scientist knows how to manage stress, avoid taking shortcuts, and maintain focus on the work. What are ways you can manage your emotional state? Do you have techniques that would help you be a level-headed and unbiased scientist?  
Engineers- Contributing to Science

We've considered three tools that are used in scientific study today. Let's take a moment to think about where these tools came from, and how the engineers who created them have impacted society.

Gel electrophoresis had been used by a few scientists in the late 20th century but it was Arne Tiselius, a Swedish biochemist and engineer, who created an apparatus using zinc electrodes in two chambers filled with zinc sulfate, linked by a quartz U tube, to separate molecules. This was in the 1940s. In 1955 another engineer, Oliver Smithies, introduced a starch gel that could be used as electrophoretic substrate to efficiently separate proteins. The inventions of these engineers contributed to new sciences such as DNA sequencing, now used by medical professionals all over the world to identify health risks, diagnose genetic diseases, and target cancer treatments.

Leland Clark, Jr was an engineer who invented the first biosensor in 1956. His sensor was used for detecting oxygen. In fact, the Clark electrode, that monitors oxygen bears his name. Francis Ligler, who is the current Eppright Chair in Biomedical Engineering at Texas A&M University, was instrumental in producing portable optical sensors that can be used in food production plants and on pollutant cleanup sites.

Computer modeling was of interest to mathematicians and engineers as computer science expanded throughout the 20th century. In 1961 Geoffrey Gordon created the Gordon Simulator as part of his work at IBM. This simulator was used first to predict weather for the Federal Aviation Administration but the science behind it promised use for all sorts of other purposes.

Are there more engineers who have contributed to the science found in the lab today? Of course! You might take a few moments to do some research and see who else you can find.

Ultimately, the tool is only as good as the person that wields it. Safety and effectiveness begin with the choices you make in a scientific laboratory. As you walk with Claire back to the front door of the lab, think back on the day's tour. What knowledge will you take forward in your science career? How may you use what you learned in your day-to-day life?

Updated Text: The Spread of Infection

When infection rates rise, the medical community attempts to understand how the pathogen is spreading. In general, there are two locations for the spread of infections:

- Hospital-acquired Infection (HAI): also called nosocomial infection, an infection that is contracted from interactions with the healthcare system
- Community-acquired Infection: an infection that is contracted from outside the healthcare system

Hospital-acquired

Where are the sick people? At the hospital! Health care is administered at many locations including hospitals, urgent care centers, and nursing homes. Treatment of infections may take place at these locations; however, some patients are there for non-infection purposes. Take, for example, a patient going to the hospital with a broken wrist but who is otherwise healthy. Through the course of examination and treatment, the patient has exposure to a pathogen. The patient then leaves with an infection. It was the interaction with the hospital that was the source of the infection.

Community-acquired Infection

Staying out of healthcare facilities does not grant exemption from infection. As you know, there are many other locations where a person may become sick. Infections often spread out in the community in locations where a lot of people are close together, such as schools, dormitories, and offices. For example, a child goes to school and comes home with a cold. The source of the cold was the school community.

Being able to identify the difference between an HAI and a community-acquired infection is important to guide the proper response. As you can see the impact of a nosocomial (or HAI) is limited to that individual, unless the infection is spread to the community. At that point, the infection may be spread to others, making it a community acquired infection. The impact of a community-acquired infection is vastly different since it could impact the entire population! In the coming lessons, you will investigate the different tools used in each setting to prevent and control the infective spread.

Location: 1A, Unit 2, Activity 3: The Different Methods of Medication Calculation

Original Text: New Content

Updated Text: Let's get some practice calculating using alligation as well. Use this method to find the answers:

1. A prescription is received for Amoxicillin solution 45 mg/5 ml. The pharmacy only has 30 mg/2.5ml and 10 mg/5 ml. How can the correct dosage be created?

Answers should include:

Convert all to similar forms and units: 30mg/2.5ml becomes 60mg/5ml

H= 60mg

L= 10 mg

Total desired 45 mg

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

60-10= 50

60-45=15

Ratio is 50: 15 or 5:3.

Five parts 30mg/2.5ml to three parts 10mg/5ml

2. An ointment containing Triamcinolone 0.05% w/v is ordered. The pharmacy has ointment in 0.025% w/v and 0.075% w/v. How can the correct dosage be created?

Answers should include:

H= 0.075%

L=0.025%

Total desired: .05%

$0.5 \cdot 0.025 = 0.0125$

$0.075 - 0.0125 = 0.0625$

Ratio is 1:1

One part 0.025% and one part 0.075%

Location: 1A, Unit 2, Lesson 4, Subheading: Formula Method, Paragraphs 1,2

Original Text: New Content

Updated Text: Dosage Calculation Method: Alligation

Similar to the ratio method, alligation is sometimes used. The alligation method is a way of calculating the proportions needed for two solutions to create a new solution that has the desired concentration. When would this be used? There are times in pharmacy that a certain solution is needed that doesn't exist. For example, the doctor may determine that a solution containing 8% hydrogen peroxide is needed in an oral rinse but manufacturers only create 4% and 10% solutions. Does this mean that the patient must settle for either less of the dose or more of the dose than called for? No. The pharmacist or healthcare professional will create a solution with the correct dose using the alligation method. They will calculate how much of each solution should be mixed to create a solution that has 8% hydrogen peroxide. Here is how it works:

We gather information to create our equation:

Higher concentration 10% w/v

Lower concentration 4% w/v

At this point, we want to verify that the concentrations are in the same form and units. In this case, both are expressed as % w/v. If we had one solution that was expressed as 2:250mg, we would need to convert that to a percentage before moving on.

Since both of ours are % w/v, we express the equation as a ratio:

H:L

10:4 % w/v

OR

10/4

Updated Text: Are there similar designs already in use? If so, were there similar problems? Consider design constraints as well. Design constraints are restrictions imposed on a project. These constraints can be grouped into categories such as physical, financial, time, health, social, ethical, political, regulatory, and legal constraints. Establishing and evaluating these constraints provides guidelines for the design problem. The table in Figure 17-12 lists examples of select types of constraints and provides examples of how engineers establish and evaluate these constraints. 2. Ideation. Sketching is the best way to convey the physical appearance of the design or redesign.

Location: Ethics and Project Management

Original Text: These negative behaviors often result in termination of employment.

Updated Text: These negative behaviors often result in termination of employment. Ethics Ethical behavior is a requirement for all members of a design team. The Society of Professional Engineers maintains a Code of Ethics for engineering professionals. This Code of Ethics includes fundamental canons, rules of practice, and professional obligations. The fundamental canons provide guidelines for analyzing ethical issues: - Hold paramount the safety, health, and welfare of the public. - Perform services only in areas of their competence. - Issue public statements only in an objective and truthful manner. - Act for each employer or client as faithful agents or trustees. - Avoid deceptive acts. - Conduct themselves honorably, responsibly, ethically, and lawfully so as to enhance the honor, reputation, and usefulness of the profession. Project Management Implementing project management methods is critical for engineers and project managers. However, all members of the design team benefit from understanding the basic steps involved in project management:- Initiating. Setting project goals and selecting the project team members. - Planning. Beginning design, determining activities required to complete the project, assigning members to specific activities, and establishing a schedule for completion of each activity and the project. - Executing. Members completing each of the required activities. - Monitoring and Controlling. Keeping track of progress on each activity throughout the course of the project and making needed adjustments to assignments, resources, plans, and schedule as the project progresses. - Closing. Completing the project and any post-project activity such as review meetings or discussions of related future activities.

Original Text: In Chapter 17, you created a design for new desks for your classroom. Working with a partner, think about the process of creating a prototype of your design. What are some design and production “bugs” that you might come across? Develop a list of problems that might arise and address how you would change your design to overcome them. Present your list to the class. Listen while other students present their lists and compare their findings to your own.

Updated Text: In Chapter 17, you created a design for new desks for your classroom. Working with one or more classmates, think about the process a team of engineers uses to plan, initiate, and execute a design project. What are some of the requirements that must be addressed in the planning stage when designing new desks or other school or office equipment? What are some design and production “bugs” that the team might encounter during a project? Develop a list of problems that might arise and address how you would change your design to overcome them. Think about how the desks will be built, the materials they will be made from, and whether fasteners will be required. Develop a project schedule that allows enough time for creating the drawings for the initial design, analyzing and approving the design, and building and testing a prototype of the product. Ask one of your classmates to manage the project and monitor progress to ensure it is completed on schedule. As a team, discuss the appropriate steps for completing the project and implementing the final product. Create a slide presentation for the project and present it to the class. Listen while other students present their feedback and compare their findings to your own. If appropriate, make adjustments to the team’s final design.

Updated Text: Your employer will emphasize the safety practices that employees must follow in your workplace. Proper maintenance also promotes safety. Tools and materials that are not stored and maintained properly can pose various hazards, including injury to workers. Negligent or improper maintenance can also result in machines or tools being damaged and wearing more quickly, or not functioning properly. As discussed in Chapter 16, safety data sheets should be maintained for all hazardous materials used in the workplace. Safety data sheets include important information such as procedures for spills. This information must be available in the event of an accident. The government agency that promotes safety in the workplace is the Occupational Safety and Health Administration (OSHA).

Updated Text: A brainstorming web links seemingly unrelated ideas together, helping to combine potential solutions into a single solution. Collaborating on Outcomes Even in these early stages of brainstorming, an engineer should be building on communication skills. It is important that every member of the group has a vote. A common type of communication tool is a decision matrix. In this type of matrix, each option is listed in the left column, while all team members are listed at the top. Each team member gets to choose a favorite, and if there are enough votes for one option, the decision is made. In the cases where everyone has a different option as a favorite, another tool may be used. This type of communication tool is a consensus resolution setback matrix. A consensus resolution allows for all team members to have a say in the choices that are made. Each potential choice may be weighted, and team members can prioritize their choices from most to least favorite.

Updated Text: 3. Select an object in the classroom and identify the criteria and constraints the engineers needed to consider when designing the product. 4. You are part of a team designing a new city park. The park will include a playground, picnic area, small lake, and parking lot. Working in small groups, create a list of potential design constraints including health-related, safety, social, environmental, ethical, political, regulatory, and legal constraints. Evaluate the potential constraints and establish a list of final project constraints. As a class, evaluate each group's constraints and establish a final list of design constraints.

Updated Text: A refined sketch of a bicycle hub. The hub is a key component of a bicycle wheel. Collaboration and Communication An important factor in selecting the best approach as you research is to ensure collaboration and communication with your engineering team. You can use different types of charts, polls, or matrices to allow team members to vote. A consensus resolution matrix is one such example. This type of matrix lists all the options on the left of the table. The team members are each listed at the top. If desired, weights can be applied at the bottom of the table for various stakeholders. This type of matrix not only allows team members to choose a favorite, but they can also give each possibility a ranking, so that everyone on the team knows the preferences from most to least favorite. This type of matrix may help resolve conflict if a consensus could not be reached prior. A consensus resolution matrix allows for transparency

among the team members. This matrix can also be used or even presented when the project is presented to a larger team to give some context to decisions that were made.

Original Text: Also, it is a good idea to allow the audience members to ask questions about the presentation. Engineers should dress professionally when giving presentations.

Updated Text: Also, it is a good idea to allow the audience members to ask questions about the presentation. Engineers should dress professionally when giving presentations. If your team previously created a matrix to vote on specific options, you should keep it handy during the presentation in case the audience requests more context surrounding decisions that were made. This may be true of either decision matrices, to show there was consensus, or it may include a consensus setback resolution matrix. It is also helpful to have a blank matrix of both types of matrices available in case stakeholders in the audience do not agree with certain aspects of the design. A decision matrix will allow them to vote for their favorites. This may be enough, but if not, a consensus setback resolution matrix will help resolve conflict. It will allow stakeholder to rank each possibility and come to a decision that may also impact potential design improvements.

Original Text: New Content

Updated Text: 8. Define a scientific theory. Explain how a theory is distinct from a hypothesis or law. Answer: A hypothesis is a testable and tentative statement that is capable of being supported or not supported by observable evidence. Once a hypothesis has been tested over a wide variety of conditions and by multiple independent researchers, it forms the basis for a scientific theory. Although scientific theories are well-tested and reliable explanations about natural phenomena, they might change as new data is obtained. A scientific theory becomes known as a scientific law when it is confirmed continuously over long periods of time and by substantial evidence.

Original Text: New Content

Updated Text: In 1929, Ernest Lawrence invented a machine, the cyclotron, that accelerated nuclear particles to previously unheard of velocities. The result was the discovery of hundreds of radioactive isotopes. Having the foresight to see the importance of these results for medicine, he collaborated with his brother, John, a hematologist at Yale Medical School, to explore the possible applications in the field. Ernest Lawrence earned the Nobel Prize for his invention, and John Lawrence is recognized as the “father of nuclear medicine,” but they are not the only scientists and engineers that have contributed to radioisotope technology and nuclear medicine. Radium, the very first radioactive element to be discovered, was first isolated by Dr. Marie Curie. Dr. Curie was the first woman to receive a Ph.D. in France and one of only four people to ever win two Nobel Prizes. Dr. Rosalyn Sussman Yalow was the daughter of Jewish immigrants from Eastern Europe. She first took a job as a secretary for a biochemist at Columbia University in exchange for classes as she could not pay for her degree. Eventually, she earned her Ph.D. in nuclear physics and her research contributed directly to the development of the radioimmunoassay (RIA), the use of radioisotopes to accurately measure small quantities of molecules within the body. RAI are one of the most-performed medical tests to this day. Advancements in science and engineering are not confined to the past. Today, scientists and engineers from diverse backgrounds are hard at work advancing the frontiers of medicine. For example, Nigerian-born Dr. Samuel Achilefu, a nationally recognized expert in

# Proclamation 2024: Report of New Content

molecular imaging and its application in treating human diseases, was recently chosen to launch and chair a new Department of Biomedical Engineering (BME) at University of Texas's Southwestern Medical Center. Dr. Achilefu's knowledge and experience with molecular probes and fluorescent imaging methods for cancer applications have revolutionized cancer treatments, included the engineering of "cancer-seeing goggles," which allow surgeons selectively remove unhealthy tissues during surgery using infrared-specific dyes. Other diverse scientists and engineers who are pioneering cutting-edge cancer-research or medical imaging technology include Dr. Kristien Boelaert at the University of Birmingham and Dr. Quing Zhu of Washington University.

Concurrency: The execution of the multiple instruction sequences at the same time. It happens in the operating system when there are several process threads running in parallel. The running process threads always communicate with each other through shared memory or message passing. Concurrency results in sharing of resources result in problems like deadlocks and resources starvation.

Updated Text: Some objects used to solve a problem include variables, data structures, functions, and methods. To identify the objects needed to solve a problem, be sure to follow these steps: 1. Identify the Problem Statement: The first and foremost step is to understand the problem you're trying to solve. Read the requirements, tasks, or goals very carefully. 2. Identify the Nouns: When you read through the problem statement, you can identify the nouns as potential objects. For example, if you're developing a car rental system, some of the nouns could be car, customer, or reservation. 3. Filter the Nouns: Not every noun identified in the problem statement would be a relevant object. It is important to filter the relevant objects from irrelevant ones. 4. Identify Relationships: Once you have a list of potential objects, the next step is to identify the relationships between these objects. 5. Identify Properties and Methods: Each object has its properties and methods. For example, a car can have properties like model, make, color, etc. and methods can be start, stop, accelerate, etc. 6. Identify the Constraints: Understand the restrictions or rules that need to be imposed on the objects. These could be validation rules or business rules that govern how your objects should behave.

Updated Text: Peripheral Devices

Peripheral computer devices are external hardware components that connect to a computer system to expand its capabilities and provide additional functionality. These devices interact with the computer system, allowing users to input, output, and store information. They enhance the overall user experience, allow users to perform tasks more efficiently, and enable the computer to interact with the external world.

Updated Text: Exercise 1. Perform the modulus division operation and evaluate the given expression using the modulus operator (%). Calculate the remainder obtained when dividing the dividend by the divisor. Determine the result of the expression.

Expression:  $(83 + 7) \% 10$

Solution: Step 1: Add the numbers inside the parentheses.  $83 + 7 = 90$

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Step 2: Perform modulus division using the result from Step 1.  $90 \% 10 = 0$

Exercise 2: Compute the value of  $(24 + 12) \% 7$  using modulus division.

Solution: Step 1: Add the values inside the parentheses:  $24 + 12 = 36$ .

Step 2: Perform modulus division on the sum obtained in Step 1 by dividing it by 7 and finding the remainder:  $36 \% 7 = 1$ .

Original Text: Many computer crimes start when an unauthorized user hacks, or gains unauthorized entry, into a computer network. This often happens when the intruder learns the password to access the victim's computer and the network. Too often, computer users choose passwords that are easy for them to remember, such as birthdates, names of pets, names of celebrities, and names of family members. Unfortunately, these passwords are also easy for intruders to guess. Surprisingly, the most common passwords used are "password" and "123456," both of which are extremely weak. Always use a strong password. Don't use things like family names, nicknames, or birth dates. Random passwords are often the strongest, like S3nD3v?. Use a combination of at least six upper- and lowercase letters, numbers, and symbols. Often the site will let you know if your password is strong enough. Some sites require you to use a passphrase, which is similar to a password but is longer and includes a string of words, not just characters. Other tips for a strong password or passphrase include: Change your password or passphrase every few months. Some sites may require this. Do not keep a record of your passwords or passphrases on your computer or on a piece of paper near your computer. Never give out your passwords or passphrases to anyone. Never type a password or passphrase while someone is watching. Most websites now offer multifactor authentication, which adds a second or even third layer of security to password access. Multifactor authentication requires you to use two or more verification factors to access a resource. It can be used for devices, like a smartphone, tablet, or computer, or for access to an online account or private network. For example, instead of just entering a password, you might also have to enter a biometric identifier, such as a fingerprint or face scan, a code that you receive via text or email on a different, verified device, or the answer to a security question.

Updated Text: Strong passwords are critical to maintaining secure online accounts and protecting personal, financial, or otherwise sensitive information from unauthorized access. Here are some of the key values of using strong passwords: 1. Prevent Unauthorized Access: Strong passwords help protect your accounts from unauthorized access. This is particularly important for accounts that contain sensitive information, such as email accounts, banking, social media, and online shopping accounts. 2. Protect Personal Information: Passwords often serve as the first line of defense in protecting your personal information. A strong password can prevent someone from accessing your personal data, including your address, phone number, social security number, and financial information. 3. Defend Against Identity Theft: If someone gains unauthorized access to your personal information, they could potentially impersonate you, leading to identity theft. A strong password makes it much more difficult for someone to access this information. 4. Avoid Financial Loss: Strong passwords are especially critical for online banking and e-commerce sites where your financial information is stored. If someone gains access to these accounts, they could make unauthorized transactions, leading to potential financial loss. 5. Prevent Damage to Reputation: If someone gains access to your social media or professional networking accounts, they could potentially damage your reputation by posting inappropriate or damaging content. 6. Safeguard Confidential Business Information: If you use passwords for work-related applications or data, a strong password can protect this sensitive information from competitors or other unauthorized parties. 7. Reduce the risk of cyber attacks: Strong passwords can also help prevent cyber attacks such as brute force attacks, where attackers try to gain access to your account by systematically checking all possible passwords until the correct one is found. In summary, strong passwords are essential for online security. They protect personal, financial, and professional information from unauthorized access and misuse. The stronger your password, the more protected you are from threats and potential cybercrime.

Updated Text: Web-Based Programming Languages

Using a web-based language typically means writing and executing code directly in a web browser. This approach offers various advantages, such as accessibility, collaboration, and ease of sharing. Methods for using web-based language development include:

1. Online Integrated Development Environments (IDEs): Web-based IDEs provide a complete development environment accessible through a browser. These platforms usually include code editors, debugging tools, and compilers/interpreters for various programming languages. Examples include Replit, CodeSandbox, and Glitch.

2. Code Playground: Code playgrounds are online platforms that allow you to write, run, and experiment with code snippets in real time. They often support multiple programming languages and provide immediate feedback on the output. Popular playgrounds include JSFiddle, CodePen, and PythonAnywhere.

3. Cloud-based Development Environments: Cloud-based development environments, like AWS Cloud9 and Gitpod, enable you to develop and run code entirely in the cloud. These platforms provide a full-featured IDE accessible via a web browser and are particularly useful for collaborative projects.

4. Web-based Notebooks: Jupyter Notebook and Google Colab are examples of web-based notebook environments that allow you to combine code, visualizations, and explanatory text in a single document. Notebooks are widely used for data analysis, machine learning, and scientific computing.

5. Online Code Editors: Several web-based code editors, such as Visual Studio Code (VS Code) and Atom, can be run directly in a browser using web-based versions or through browser extensions. These editors offer powerful features, extensions, and integrations with various programming languages.

6. Web-based Language-Specific Tools: Some programming languages have their web-based tools for development and execution. For instance, JavaScript has websites like JS Bin and JSfiddle, which provide environments tailored specifically for JavaScript coding and testing.

Other tips for a strong password or passphrase include: Change your password or passphrase every few months. Some sites may require this. Do not keep a record of your passwords or passphrases on your computer or on a piece of paper near your computer. Never give out your passwords or passphrases to anyone. Never type a password or passphrase while someone is watching. Most websites now offer multifactor authentication, which adds a second or even third layer of security to password access. Multifactor authentication requires you to use two or more verification factors to access a resource. It can be used for devices, like a smartphone, tablet, or computer, or for access to an online account or private network. For example, instead of just entering a password, you might also have to enter a biometric identifier, such as a fingerprint or face scan, a code that you receive via text or email on a different, verified device, or the answer to a security question.

Updated Text: Strong passwords are critical to maintaining secure online accounts and protecting personal, financial, or otherwise sensitive information from unauthorized access. Here are some of the key values of using strong passwords: 1. Prevent Unauthorized Access: Strong passwords help protect your accounts from unauthorized access. This is particularly important for accounts that contain sensitive information, such as email accounts, banking, social media, and online shopping accounts. 2. Protect Personal Information: Passwords often serve as the first line of defense in protecting your personal information. A strong password can prevent someone from accessing your personal data, including your address, phone number, social security number, and financial information. 3. Defend Against Identity Theft: If someone gains unauthorized access to your personal information, they could potentially impersonate you, leading to identity theft. A strong password makes it much more difficult for someone to access this information. 4. Avoid Financial Loss: Strong passwords are especially critical for online banking and e-commerce sites where your financial information is stored. If someone gains access to these accounts, they could make unauthorized transactions, leading to potential financial loss. 5. Prevent Damage to Reputation: If someone gains access to your social media or professional networking accounts, they could potentially damage your reputation by posting inappropriate or damaging content. 6. Safeguard Confidential Business Information: If you use passwords for work-related applications or data, a strong password can protect this sensitive information from competitors or other unauthorized parties. 7. Reduce the risk of cyber attacks: Strong passwords can also help prevent cyber attacks such as brute force attacks, where attackers try to gain access to your account by systematically checking all possible passwords until the correct one is found. In summary, strong passwords are essential for online security. They protect personal, financial, and professional information from unauthorized access and misuse. The stronger your password, the more protected you are from threats and potential cybercrime.

Updated Text: Web-Based Programming Languages

Using a web-based language typically means writing and executing code directly in a web browser. This approach offers various advantages, such as accessibility, collaboration, and ease of sharing. Methods for using web-based language development include:

Environments (IDEs): Web-based IDEs provide a complete development environment accessible through a browser.

These platforms usually include code editors, debugging tools, and compilers/interpreters for various programming languages. Examples include Replit, CodeSandbox, and Glitch.

Code Playground: Code playgrounds are online platforms that allow you to write, run, and experiment with code snippets in real time. They often support multiple programming languages and provide immediate feedback on the output.

Popular playgrounds include JSFiddle, CodePen, and PythonAnywhere.

Environments: Cloud-based development environments, like AWS Cloud9 and Gitpod, enable you to develop and run code entirely in the cloud. These platforms provide a full-featured IDE accessible via a web browser and are particularly useful for collaborative projects.

Web-based Notebooks: Jupyter Notebook and Google Colab are examples of web-based notebook environments that allow you to combine code, visualizations, and explanatory text in a single document. Notebooks are widely used for data analysis, machine learning, and scientific computing.

Online Code Editors: Several web-based code editors, such as Visual Studio Code (VS Code) and Atom, can be run directly in a browser using web-based versions or through browser extensions. These editors offer powerful features, extensions, and integrations with various programming languages.

Specific Tools: Some programming languages have their web-based tools for development and execution. For instance, JavaScript has websites like JS Bin and JSfiddle, which provide environments tailored specifically for JavaScript coding and testing.

Location: Primary Memory and Secondary Memory

Original Text: Primary memory, or main memory, is the computer's work area. It is also called primary storage. This is where the computer stores a program while the program is running, as well as the data that the program is working with. For example, suppose you are using a word processing program to write an essay for one of your classes. While you do this, both the word processing program and the essay are stored in main memory. One type of primary memory is called random-access memory (RAM). It is called this because the CPU is able to quickly access data stored at any random location in RAM. RAM is usually a volatile type of memory that is used only for temporary storage while a program is running. When the computer is turned off, the contents of RAM are erased. Inside your computer, RAM is stored in chips, similar to the ones shown in Figure 1-5. Another type of primary memory is called read-only memory (ROM). ROM chips store instructions for starting the computer. ROM is nonvolatile memory. It stores data permanently, even when the power to the computer is off. Secondary memory is a type of memory that can hold data for long periods of time, even when there is no power to the computer. Secondary memory is what most people think of as storage, or secondary storage. Programs are normally stored in secondary memory and loaded into main memory as needed. Important data, such as word processing documents, payroll data, and inventory records, is saved to secondary storage, as well. The most common type of secondary storage device is the disk drive. A traditional disk drive stores data by magnetically encoding it onto a spinning circular disk. Solid-state drives store data in solid-state memory. A solid-state drive has no moving parts and operates faster than a traditional disk drive. Most computers have some sort of secondary storage device, either a traditional disk drive or a solid-state drive, mounted inside their case. Even cell phones have internal storage, and can perform as external storage devices, as well. External storage devices, which connect to one of the computer's communication ports, can be used to create backup copies of important data or to move data to another computer.

Updated Text: Primary Memory Primary memory and primary storage are two different terms often used interchangeably, but they actually refer to two distinct concepts within computer architecture. 1. Primary Memory: Also known as main memory, primary memory includes Random Access Memory (RAM) and cache memory. This is the memory used by a computer to execute programs and operations. The CPU can read from or write to this memory very quickly. RAM is volatile, meaning it only retains data while the computer is on. When you turn off the computer, anything stored in RAM is lost. Cache memory, another part of primary memory, is smaller but faster than RAM and stores frequently accessed data to speed up the operation. 2. Primary Storage: This term is often used to refer to the primary location where data is stored, especially in the context of an extensive system or network. This could include both primary memory (like RAM) and non-volatile storage devices, like hard drives or solid-state drives (SSD), which store data even when the computer is turned off. In some contexts, "primary storage" may refer to non-volatile storage devices.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

This storage can be slower to access than primary memory, but it's used to store data and programs when they're not in active use. So, in general, primary memory refers to the fast, volatile memory that a CPU uses for active operations. In contrast, primary storage can include this memory as well as slower, non-volatile storage devices used for longer-term storage. The exact definitions can vary depending on the context, so it's a good idea to clarify if it's not clear from the situation. Secondary Memory Secondary memory and secondary storage refer to the same concept, which is non-volatile storage in a computer that persists even when the computer is powered off. These terms are often used interchangeably. This form of storage typically includes devices like hard drives, SSDs, CDs, DVDs, USB drives, and other types of storage media. It's where a computer stores data that is not being actively used by its processor (CPU), including the operating system, software programs, and files. To summarize, secondary memory and secondary storage refer to the same thing but are just different terminologies used in computing. They contrast with primary memory or storage (like RAM), which is faster but volatile, meaning data stored in it is lost when power is removed.

Original Text: Imagine you are taking a picture of a sunset over a lake, and your phone slips out of your hands. You watch as it sinks to the bottom. Or, you put it down in the driveway and someone backs a car over it. What happens to your files, contacts, pictures, and videos? Losing a device does not have to be a disaster as long as you have backed up your data. Backing up is simply creating a copy of the data that is stored separately in an off-site or remote location away from the original. You can back up data manually or use a program that performs the backup automatically on a set schedule. You can restore the data to a new device from the backup. Now, think about what happens to your data when you trade in the device for a new one. Is your old data still stored on the old device? Who might have access to it? Deleting a file will not keep it secure. Hackers can easily find deleted files. To make sure information is not left on a device, you must reformat or wipe the drive, which destroys all files. You can clear a smartphone or tablet by resetting it to its factory configuration or using the Erase All command, then removing the SIM card, if there is one. Before you do, however, make sure you back up your contacts, photos, and any other information you want to keep so you can install it on your new device.

Updated Text: A computer virus is a type of malicious software program that, once executed, replicates by modifying other computer programs and inserting its own code. It often causes harm by corrupting system data, wasting resources, or disrupting the normal functioning of the computer system.

The value of virus protection, especially in our increasingly digital world, cannot be overstated, as it safeguards our sensitive data from cyber threats and malicious software. It provides a critical layer of defense, preventing unauthorized access to our personal and professional information, thereby maintaining privacy, integrity, and system functionality. Moreover, investing in robust virus protection mitigates the risk of costly disruptions and potential loss, fostering confidence and trust in digital technologies.

Updated Text: 1. Integer division (also known as "floor division"): Integer division is the mathematical division operation where the decimal portion of the division result is truncated or rounded down, resulting in an integer. For example, in Python, integer division is performed using the `//` operator. If you perform the operation `9 // 4`, the result will be 2, not 2.25.

2. Real division (also known as "floating-point division"): Real division is the mathematical division operation where the complete quotient is preserved, including the decimal portion. For instance, in Python, real division is performed using the `/` operator. If you perform the operation `9 / 4`, the result will be 2.25.

In many programming languages, the type of division performed depends on the types of the numbers being divided. If both numbers are integers, then integer division is often the default. If one or both numbers are floating-point numbers (which can represent non-integer values), then real division is typically used. However, this behavior can vary between languages, so it's always a good idea to check the specific rules for the language you're using.

Location: The CPU

Original Text: New Content

Updated Text: A central processing unit (CPU) executes programs by performing a series of basic operations in a specific order. The CPU follows instructions provided by the program and carries out various tasks to perform calculations, manipulate data, and control the flow of the program. Here is a high-level overview of how a CPU runs or executes programs:

1. Fetch: The CPU fetches the next instruction from the program stored in memory. The program counter (PC) keeps track of the memory address of the next instruction to be executed.

2. Decode: The fetched instruction is decoded to determine the operation to be performed and the operands involved. The CPU's instruction set architecture defines the format and meaning of instructions.
3. Execute: The CPU executes the instruction by performing the required operation. This may involve arithmetic calculations, logical operations, data movement, or control flow instructions such as branches or jumps.

4. Memory Access: If the instruction requires accessing data from memory, the CPU fetches the data from or stores the data to the appropriate memory location. This step ensures that the CPU can read and write data as needed during program execution.

5. Write Back: After the instruction is executed, the results are written back to the appropriate registers or memory locations, depending on the operation performed.

6. Update Program Counter: The program counter (PC) is updated to point to the next instruction in memory, allowing the CPU to fetch the subsequent instruction and repeat the process. The CPU repeats these steps continuously, fetching, decoding, executing, and updating the program counter until the program is complete.

Updated Text: In this exercise you will practice integer division and reinforce understanding of division operations with whole numbers.

Instructions:

1. Divide the following pairs of numbers using integer division and write down the quotient (whole number result) without any remainders or decimals.

a)  $42 \div 9$  b)  $10/3$  c)  $63/5$  d)  $17/5$

2. Solve the following word problems involving integer division. Write down the quotient as the answer.

a) John has 75 apples that he wants to distribute equally among his 6 friends. How many apples will each friend receive?

b) A box contains 64 chocolates, and they need to be divided equally into 7 smaller boxes. How many chocolates will each

Updated Text: In this exercise you will practice integer division and reinforce understanding of division operations with whole numbers.

Instructions:

1. Divide the following pairs of numbers using integer division and write down the quotient (whole number result)

without any remainders or decimals.

a)  $42 \div 9$  b)  $10/3$  c)  $63/5$  d)  $17/5$

2. Solve the following word problems involving integer division. Write down the quotient as the answer.

a) John has 75 apples that he wants to distribute equally among his 6 friends. How many apples will each friend receive?

b) A box contains 64 chocolates, and they need to be divided equally into 7 smaller boxes. How many chocolates will each smaller box contain? c) A farmer has 90 eggs and wants to place them in cartons. Each carton can hold 7 eggs. How many cartons will the farmer need?

3. Challenge: Solve the following division problem and write down the quotient without any remainders or decimals.

a)  $267 \div 9 =$

Updated Text: Peripheral Devices

Peripheral computer devices are external hardware components that connect to a computer system to expand its capabilities and provide additional functionality. These devices interact with the computer system, allowing users to input, output, and store information. They enhance the overall user experience, allow users to perform tasks more efficiently, and enable the computer to interact with the external world.

Updated Text: Exercise 1. Perform the modulus division operation and evaluate the given expression using the modulus operator (%). Calculate the remainder obtained when dividing the dividend by the divisor. Determine the result of the expression.

Expression:  $(83 + 7) \% 10$

Solution: Step 1: Add the numbers inside the parentheses.  $83 + 7 = 90$

Step 2: Perform modulus division using the result from Step 1.  $90 \% 10 = 0$

Exercise 2: Compute the value of  $(24 + 12) \% 7$  using modulus division.

Solution: Step 1: Add the values inside the parentheses:  $24 + 12 = 36$ .

Step 2: Perform modulus division on the sum obtained in Step 1 by dividing it by 7 and finding the remainder:  $36 \% 7 = 1$ .

Updated Text: Using the knowledge gained from the previous two activities, students should now be given time and resource to explore and describe specific requirements for careers in Forensic Science. Students should be split into five small groups. Each group should be provided with one of the following requirements: collegiate course requirements, licensure, certifications, physical capabilities or mental capabilities. Students are now given the task to research their given requirement, in direct relation to careers in Forensic Science, and create a short report (in any chosen format) to present to the rest of the class.

Updated Text: How does this work relate to how forensic science professionals need to develop and use models to represent phenomena, systems, processes, or solutions to engineering problems? Let us consider one of the crime scenes involved with the collected data.

An employee lost their arm in a factory accident. A forensic engineer was called to the scene. The forensic engineer is responsible for collecting forensic evidence at the site of a structure/equipment failure; they develop and use models to represent engineering problems, and determine the cause of failure. This evidence is then presented in court, together with other collected evidence such as bloodstain analysis.

Imagine you are the forensic science engineer. Draw or make a model to show the scene at which the equipment failure occurred. You can create a script and detail the characters, the type of factory, and equipment.

Write a report to detail what happened to cause the equipment to fail. Refer back to your engineering process notes from earlier this year. Explain why you chose your style of model, how you developed and used it, and how it can be further developed as you, the engineer, gather more information. Here is a diagram of the engineering process to help you further.

Updated Text: Form small collaborative groups and review your models and scripts of the factory accident. Discuss each one and decide what the advantages and limitations of each model are. Which works best and why? Would the model work if the product failure had been a building collapsing, or would a different model work better if the failure related to a large scale engineering failure? Discuss as a class.

# Proclamation 2024: Report of New Content

This report contains the new content that was reviewed and approved by the state review panels. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Original Text: New Content

Updated Text: Explain the importance of the work of a forensic engineer; explore and describe how his or her work includes development of models to represent solutions to engineering problems. Support your answer with a story, scale model and report of a crime scene. Research and explain how the evidence would be used in court.

Preliminary
